PUBLISHING

Your guarantee of value

Power are known as market leaders for being a step ahead of the rest and manufacturing innovative products for our customers. Now we have the pleasure of introducing the ultimate multimedia service for Corporate and Business users.

You've heard how the Amiga has made television programmes possible such as Star Trek-The Next Generation, Babylon 5, Seaquest DSV, even the wire frame modelling for Jurassic Park was created on the Amiga. But how do you find out how to make the Amiga work for you?

#### Premier Vision services

Monthly events on Digital Television, Multimedia, Audio & Music production, are designed to show how the Amiga is used for specific applications.

We can design and install complete systems.

One to one, or one to two training for specific applications or software products.

#### Official Scala Training Centre

We create complete custom Multi-Media systems for point of information, point of sale, training and education, including CD-ROM mastering and duplication.

#### Products

Personal Animation Recorder, Sunrise, AD516, Warp Engines, Video Toaster, Peggy Plus MPeg Decoder, Lightwave 3D, Info Channel, Scala Multi-Media and Bars & Pipes Professional

21st Century  
CIC Video  
Granada TV  
National Trust  
British Gas  
Shell  
Ministry of Defence

For information please call  
**071 721 7050**

#### MEGACHIP RAM

Increase your Amiga 500/2000 chip RAM to a total of 2MB. MegaChip does this by using its own 1MB of RAM and drawing extra memory from any other RAM you have installed in your Amiga. No soldering is required.

MegaChip RAM .....**£159**

#### MEMORY EXPANSION

We manufacture a vast range of memory cards for the Amiga 500, 500+, 600, 1200, 1500, 2000, 3000 and 4000. Please telephone us for prices and availability.

#### EMPLANT MAC EMULATOR

This Macintosh emulation board boasts to many features to list all of them, for further details please contact Power. Some of the features include full colour support, stereo sound, hard drive support, Mac 800K and Mac/IBM 1.44MB support, Appletalk, SCSI devices, printers, scanners and CD-ROM etc.

Basic .....**£279.95**  
Basic + Appletalk .....**£329.95**  
Basic + SCSI Interface .....**£329.95**  
Basic + Appletalk/SCSI Interface **£379.95**

#### OCTOGEN SCSI-2

SCSI-2 board for the Amiga 2000 including memory expansion capabilities of up to 8MB.

Octogen SCSI-2 .....**£129**

#### CO-PROCESSOR

All maths co-processors include crystals.  
20MHz .....**£25**  
33MHz .....**£60**  
40MHz .....**£80**  
50MHz (PGA) .....**£120**

#### CHIPS & SPARES

Call for your requirements .....**£POA**

#### DKB 4091

Connects up to seven SCSI devices to your Amiga. The DKB 4091 features: Full Zorro III implementation, fast SCSI-2 implementation, direct memory access.

DKB 4091 .....**£299**

#### WORKBENCH 2.1

Release 2.1 Enhancer, including 2.1 software and User Guide manuals.

2.1 Enhancer .....**£69**  
ROM Sharer with 2.04 ROM .....**£99**  
2.04 ROM Chip .....**£29**

#### REPLACEMENT PSU

Replacement PSU for GVP HD & other HD's  
Replacement Power Supply Unit .....**£39**

#### TANDEM CD-DE

- For 1500/2000/3000/4000
- Supports Mitsuma LU005 CD-ROM & FX001D double speed CD-ROM drives
- Supports Syquest 3.5" drives
- Supports IDE hard drives
- Play audio CD utility
- Requires KickStart 2.04 and above
- Includes cables, software and manual

Tandem CD-DE card .....**£69**  
Tandem CD-DE A1200 card .....**£69**  
Tandem CD-DE & CD Drive .....**£229**  
Mitsuma CD-ROM Drive .....**£160**

#### AUTO ROM SHARE

ROM Share .....**£19.95**  
ROM Share including v2.04 .....**£50**  
ROM Share including v1.3 .....**£39**  
ROM Share A600 .....**£29**  
ROM Share A600 v1.3 .....**£55**

#### VGA ADAPTOR

VGA Adaptor .....**£15**

#### POWERSCAN 4

Produce 256 greyscale images (on a AGA machine), scan in 64 greyscales (non AGA Amiga can only display 16), add colour to greyscale images, special effects, new support for 18-bit scanner, add text to scans. A1200/600 version available.

PowerScan 4 (Mono) .....**£119**  
PowerScan 4 inc. OCR .....**£139**  
PowerScan 4 upgrade interface .....**£50**  
PowerScan 4 upgrade software .....**£20**  
OCR Full version .....**£49**

"PowerScan is virtually flawless."  
Highly recommended" Amiga Format

#### EPSON SCANNERS

The GT-6500 and GT-8000 24-bit colour flatbed scanners from Epson scan up to A4 in size, with output resolutions of up to 1200DPI on the GT-6500 and 1600DPI on the GT-8000 in 16.7 million colours, greyscale or line art. The scanners include either PowerScan or Image FX scanning software.

Epson GT-6500 PowerScan .....**£599**  
Epson GT-6500 Image FX .....**£689**  
Epson GT-8000 PowerScan .....**£849**  
Epson GT-8000 Image FX .....**£929**  
Document Feeder .....**£399**

#### DISK EXPANDER

- Can add 50% to your hard drive capacity at a stroke
- Fast compression and decompression
- Flexible and expandable as new compression libraries are developed
- Works with all drives, including SCSI, IDE, Floppies, and even the RAM disk
- Reliable in tests - no data corruption
- Once installed the program is transparent to the user
- Works on any Amiga and any KickStart

Disk Expander .....**£35**  
Floppy Expander (Compress files on disks) **£9.95**

#### VIDEO BACKUP

Use a VCR as backup. 200 Amiga floppy disks fit on to a 4Hr tape. Allows you to watch TV on your 1084s monitor.

Video Backup Scart .....**£65**  
Video Backup Phono .....**£60**

## AMIGA FORMAT

More people read *Amiga Format* than any other Amiga magazine on the planet!

Welcome to *Amiga Format*. By choosing this magazine you have just made a very wise decision: this is the world's most popular Amiga magazine. And that means more Amiga users know us, trust us and choose to read us than anyone else.

Why? Because *Amiga Format*'s readers know they can trust our judgment and buying recommendations. Because we thoroughly test products, for one thing, and because we're not afraid to tell the truth. No matter how harsh it may be.

The proof? Commodore itself regularly chooses *Amiga Format* to prepare special editions of the magazine to be bundled with its machines. And surveys have consistently shown that retailers trust *Amiga Format*'s reviews above any other magazine.

So you know you can read *Amiga Format* with confidence. Welcome to the world's biggest community of Amiga users!

Steve Jarratt, Editor

# This Month IN VIEW

Another month, another *Amiga Format*. Steve Jarratt takes a few moments to reflect on the things that helped shape the last 30 days...

**A**t long last, it looks like the Amiga's heart can start beating again. A few weeks ago I spoke to Dave Pleasance, and was pretty happy with what I heard.

So far the story goes thus: it appears that the companies all lining up to take over Commodore were more interested in the technology than the name. If any of them actually bought the company, chances were that the Amiga brand would be as good as dead, although Commodore's technology would live on in some other form.

So, during this time, the management of Commodore have been looking to other companies as investors. I gather the extension to the period of protection under the Bahamian liquidators was for the Commodore crew to actually secure some investment and put in a bid themselves. By the time you read this, Commodore will have chosen their investment partner who will be in the process of due diligence, where they check the books and examine the company's business plans.

**Pleasance is confident** that, so far, their bid is the one with the best chance of success; and even if it isn't their current partners have enough clout to up the offer.

The UK operation of Commodore has always been the most profitable arm of the organisation, and their plans are based solely on projected sales for the UK. Any extra sales in the Europe, US, and Australia will be an added bonus.

The new company (which will lose the Commodore name in favour of something like Amiga International Ltd) will be headed up from the UK premises in Maidenhead, and there are plans to bring all production to the UK, where they can keep tighter

control over what they produce and when, increasing their efficiency and productivity.

The cut-off point for the take-over is August 31/September 1. If the wheeler-dealing continues beyond this point the all-new Commodore wouldn't be able to ramp up production in time for the Christmas push – and it needs this Christmas to be a good one, more than ever.

Pleasance remains optimistic, though. They have plans for new A1200 and CD32 bundles and it looks very much like the CD1200 will make its long-awaited appearance before the Yuletide season. But – contrary to popular belief – there won't be any new machines produced until the Spring of next year.

However, their plans for future hardware remain intact: late next year should see the introduction of the AAA chipset, with 64-bit RISC coming some time in '96.

**This month the AF team** were to be found at odd moments huddled round Sue White's art Mac. A strange thing for a group of Amiga fanatics you might think, but we had good reason. Sue has a PowerMac which uses the new RISC PowerPC chip, the one that was been developed jointly between Motorola, Apple and IBM.

Running on this PowerMac in 'native' (ie RISC) mode was a Mandelbrot explorer program, which enabled the group to descend into the whirling striations of the Mandelbrot set – and do it with blinding speed (a full screen, full colour redraw averaging around seven seconds). OK, it wasn't exactly like watching a Cray in action, but this was the fastest I've seen any 'affordable' computer compute the Mandelbrot set.

"So what: how does that affect Amiga owners, dummy?" Comes the reasonable response. Well, given, that most Amigas can out-pace similarly-specced Macs, just think what a RISC-based Amiga will be capable of?

In previous conversations with David Pleasance, he has said that the potential buyers of

Commodore were only really interested in its future technology, and people close to Commodore have stated that even the – let's call them Orientals – were impressed with what they saw. Imagine running *Imagine*, where images are rendered eight times faster! Or playing 3D games that shift hundreds of thousands of texture-mapped polygons every second... The mind boggles. Roll on the A6400?

**This Month In View** is supposed to be about the month just gone, I know, but I've just got room to tell you about next month's disk package. We've just signed a deal to put *TV\*Text Professional v1.0* on *AF64's* Coverdisk, a video titling program worth no less than £130!

Old 'Black Belt' Holborn has been fiddling with *TV\*Text Pro* for a while and reckons it's "stonkingly good". But then you can find out exactly how good it is for yourself next month.

And it also ties in nicely with the theme of next month's *AF*, in which resident video guru Steve McGill will be showing you how to get into video with the minimum of fuss and expense. With *TV\*Text Professional* on the Coverdisk, you've already got a head start.

But how does *Amiga Format* keep coming up with this splendid software? Well, previously Nick Veitch was our top program-procurement operative; but now it's all thanks to the newest member of the team – Dale Bradford. Welshman Dale has come on board to make sure that *AF's* Coverdisks maintain the quality set by the likes of *Imagine*, *Music-X* and *PageSetter 2*.

So a cheery welcome for Dale and a rousing cheer for all the lovely stuff we've got lined up for you. See you next ish, with your Amigas and VCRs at the ready! ☺

# KEEP YOUR FINANCES SORT OF UNDER CONTROL.

If you're just starting work and you're sort of worried about your money, open a Lloyds Bank Choice account.

We'll give you a cash card, a cheque book with guarantee card and a £50 safety net – so if you slip into the red you won't have to pay interest or account charges. You can also get free statements whenever you want them, and a budget account to help with paying bills.

The account changes as you do, so it'll still be useful when you're fantastically rich and successful. Well, sort of.

For more details, freephone **0800 710 723**, pop into your local branch or fill in the coupon opposite.

**Lloyds  
Bank**

**FREEPHONE: 0800 710 723.**

Or fill out the coupon below, and send it in an envelope to our freepost address now. You will receive details of our Youth Deal within 7 days. **PLEASE PRINT CLEARLY.**

receive a state-of-the-art Panasonic 3DO system plus software worth around £400.  
Competition winners will be listed in the club magazine or available on request.

AMIGA FORMAT CAGE

# AMIGA FORMAT COVERDISKS

WITH THIS MONTH'S COVERDISKS YOU CAN...

Create your own personal stationery, or even produce your own magazine, with **PageSetter 2**. Yikes!

Outwit rogue robots in **G2**, an impressive 3D shoot-em-up set within the confines of a maze of corridors!

## PAGESETTER 2

You'll need to download our PageSetter 2 Coverdisk on to two blank disks first.

Start your own publishing empire with nothing more than your Amiga, a couple of good ideas and a copy of this month's Coverdisk star, **PageSetter 2**.

**Y**ou don't have to be a publishing baron to benefit from the joys of desktop publishing with **PageSetter 2** - you can use it to create anything from posters or advertisements to newsletters.

**PageSetter 2** can be used to create complex layouts complete with outline fonts (two such fonts are included with the program), structured clip art and illustrations, text and IFF pictures. In short, all the ingredients that are vital for serious desktop publishing.

Even when compared to state-of-the-art page layout programs, such as *Professional Page 4* and *PageStream 3*, **PageSetter 2** is no slouch in the features department. Although you can only work on a single page at any one time, **PageSetter 2** enables you to create documents consisting of many different pages. The size of your pages is down to you too - if the four default page size settings aren't right for your needs, you can enter the measurements of your own custom page size.

You could, for example, set up a page to the exact dimensions of a compliment slip or a business card. In short, **PageSetter** is just the thing for all your stationery requirements.

**PageSetter 2** provides an extensive list of page layout tools including extensive typographical controls (more on this later) and impressive magnification functions. You can zoom right in to your layout and view it at 200 per cent, its real size or, for a more overall view, zoom out and view the document in miniature at just 33 per cent.

To aid the process of accurately laying out complex pages, **PageSetter** enables you to set up a

### BEFORE YOU START

The complete **PageSetter 2** package consists of two disks - the **PageSetter 2** program disk and a second Utilities/Fonts disk. Both these disks have been packed on to our autobooting Coverdisk using the PD cruncher program **DMS**. In order to run **PageSetter**, you'll need two blank disks to hold the **PageSetter** package.

Insert your Coverdisk into the internal drive of your Amiga, switch on and then follow the on-screen prompts. Once the two **PageSetter** disks have been prepared, you can then reboot your Amiga using the first **PageSetter 2** disk.

Another issue and another brace of brilliant Coverdisks for you to get your teeth into. You can trust *Amiga Format* to guarantee you maximum value for your money.

For DTP, you'll definitely need a big, shiny desk. Like this one...

temporary grid of a specified size which can then be used to align any boxes that you place on to the page. To make this even more accurate, you can set *PageSetter 2* to 'snap' text and illustrations to the grid so that everything on the page is automatically aligned correctly.

Layouts are created in *PageSetter 2* using boxes which can hold either text, pictures or structured illustrations. When the Text toolbar gadget is selected, text can be typed directly into a box that is either empty or already contains text.

*PageSetter* fully supports Preferences printers and so just about any printer can be used to print *PageSetter* pages. If you've got a laser printer, the quality of results obtainable from *PageSetter* have to be seen to be believed – because *PageSetter 2* uses outline fonts, all the text is printed at the maximum resolution of your printer. So even with a nine-pin dot matrix, *PageSetter 2* produces phenomenally good results.

Pages are built up in *PageSetter 2* using boxes. Every box you place on to a page can contain one of three different page elements – text, bitmapped pictures or structured clip art. If you want to alter the size or shape of a box at a later date, all you have to do is to click on it and then use one of the eight handles on the outline of the box to resize it.

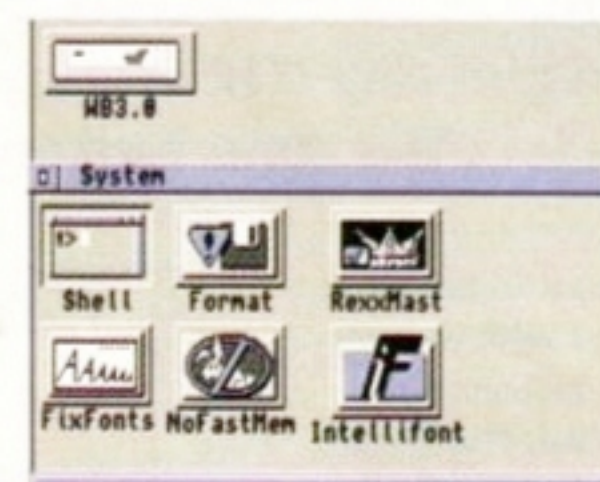

When you first create a page, *PageSetter 2* automatically places a box on the page for you, but other boxes will be required if you wish to create a more complex layout.

For a more detailed breakdown of the *PageSetter 2* tools and how to utilise them, just turn the page.

Continued overleaf ➔

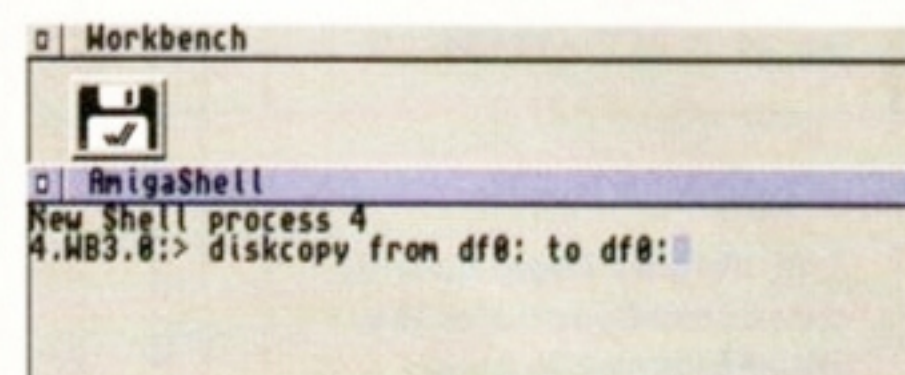

## BACKING UP YOUR COVERDISK

Copying your Coverdisk is very simple. Just follow the stages below...

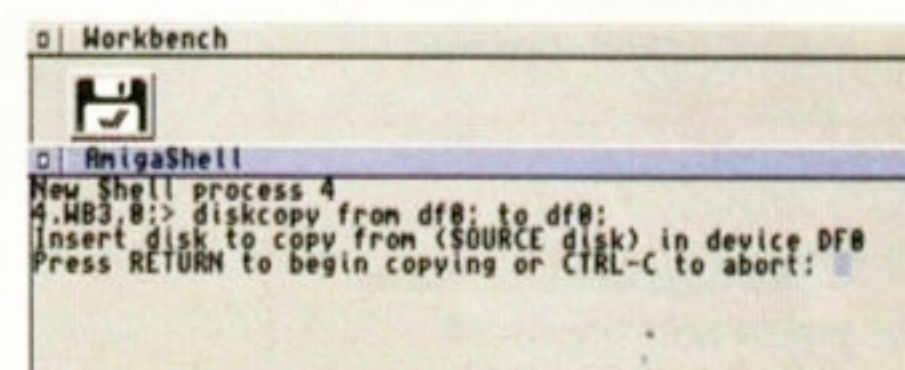

**1** Boot up with your Workbench disk, and find the icon called Shell, which should be in your system drawer.

Double-click on this to go into the Shell itself.

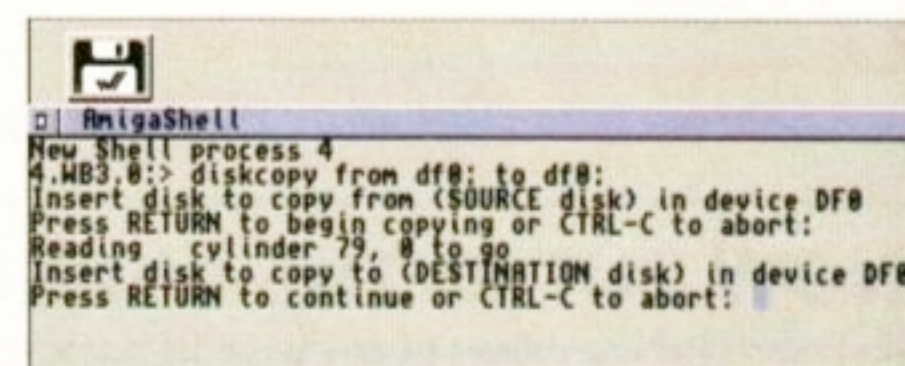

**2** Type in the following line exactly as it appears here, taking care to put the spaces in the correct places:

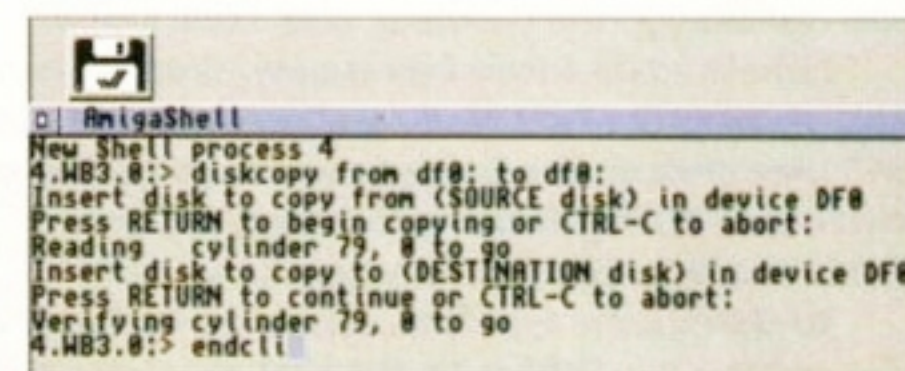

DISKCOPY FROM DF0: TO DF0:

**3** When asked for the source disk, insert the Coverdisk and press Return. All of the information on this disk will then be copied from the disk into memory.

**4** Once your Amiga has read the info, it will ask for the destination disk. Insert the disk you want to copy to and press Return. All information on this disk will be destroyed.

**5** On an unexpanded machine, the Amiga may ask for the source disk again, as it copies in chunks. Finally, type Endcli to close down the Shell. Your copy is complete.

## DISK NOT WORKING?

We produce a whole truck-load of disks every month, so you can imagine that a few will turn out to be bad. Sad, but true. So if you are the unfortunate parent of a problem disk, send it back, including a stamped addressed envelope for a free replacement to:

Amiga Format (insert the name of the disk) Disk, Discopy Labs Ltd, PO Box 21, Daventry, NN11 5BU.

# PUT IT IN PRINT

## START WITH A BLANK PAGE

The first step in any DTP work with *PageSetter 2* is to create a blank page which holds your text and pictures. Select the New option from the Page pull-down menu. You will see the following requester:

1. First you need to create a range of pages with exactly the same dimensions and format en masse. The From Page box sets the starting page number and To Page sets the page number of the last page in the range.

7. By default, *PageSetter 2* automatically handles the job of linking the boxes together so that whenever a column is filled with text, the text overflows into the next column. If you turn this option off, the columns are not linked together.

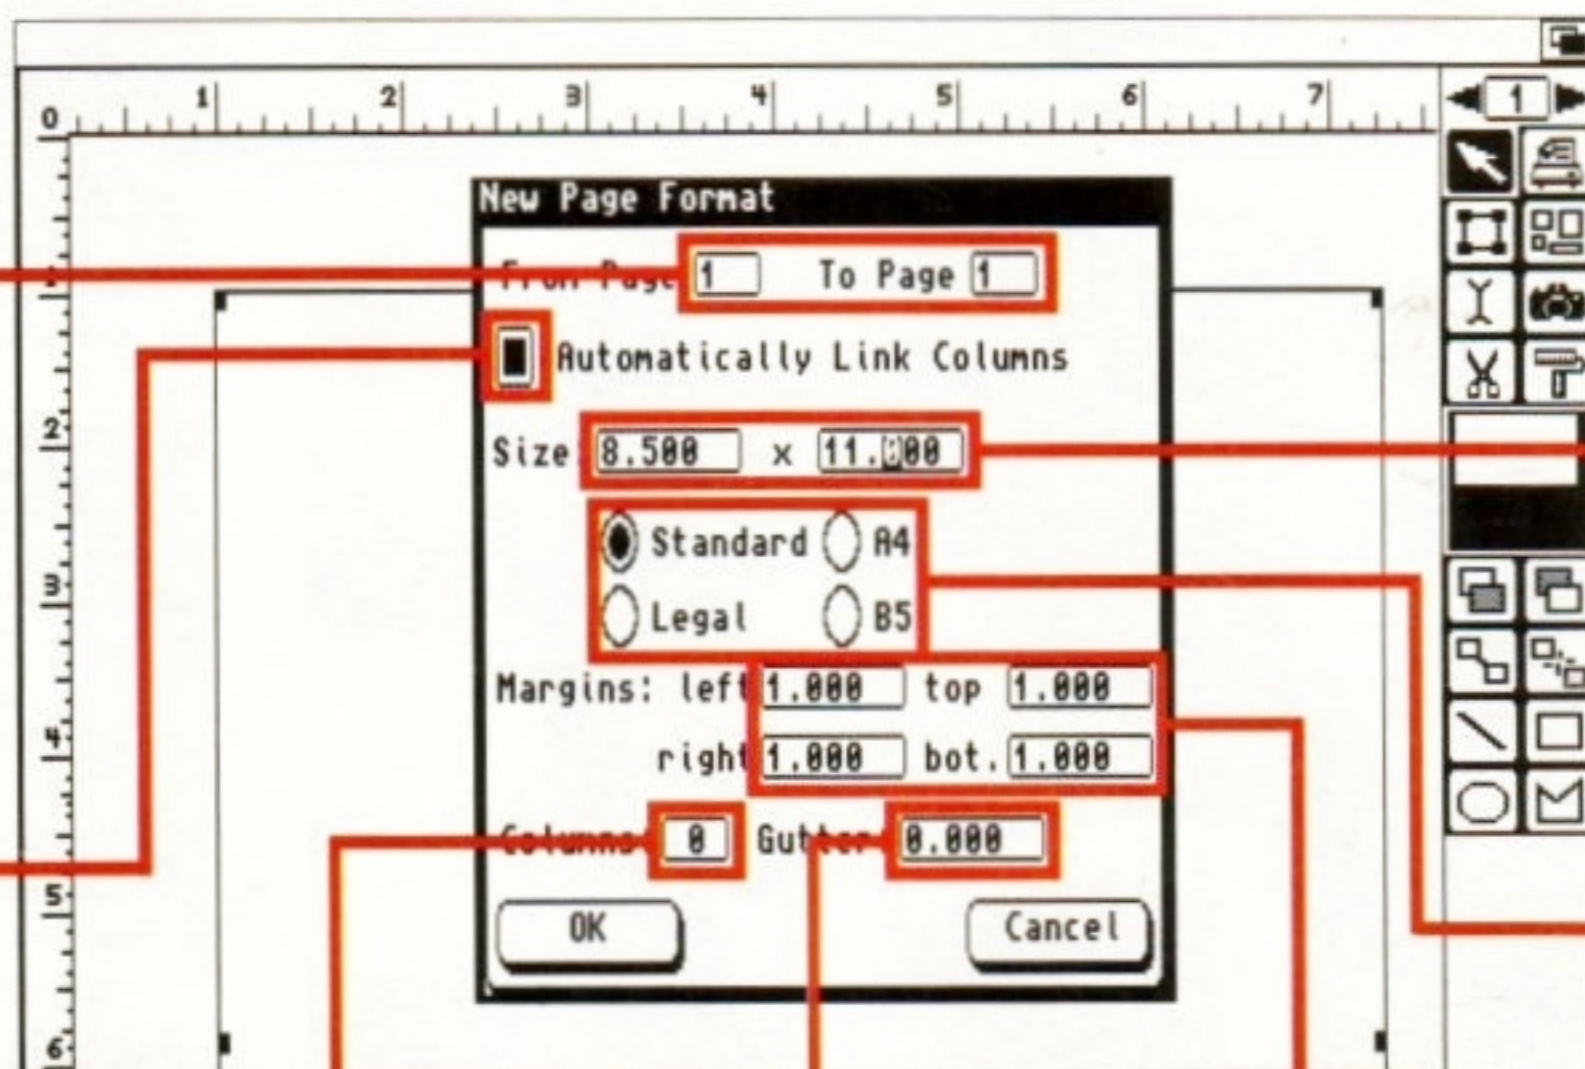

6. The Columns box allows you to split the single default text box that *PageSetter* automatically places on to each new page into two or more linked boxes aligned together to form columns.

5. The Gutter value defines the amount of space between two or more columns. The average gutter size is 0.125 inches.

2. The two size number gadgets allow you to define the horizontal and vertical size of a page in inches. This facility comes in particularly handy when creating custom stationery – such as business cards and pamphlets – not covered by the four default sizes.

3. These four gadgets give you a choice of four commonly-used default page sizes – A4, B5, Standard Letter and Legal Letter. Click on the one you want and the Size gadget is automatically adjusted.

4. Once the page size is fixed, *PageSetter* automatically creates a text box (or a series of text boxes if you have more than one column) on the page. These four margin settings allow you to define not only how far away from the edges of the page the box is placed, but also the size of the box (or boxes).

## NOW PUT IN THE WORDS

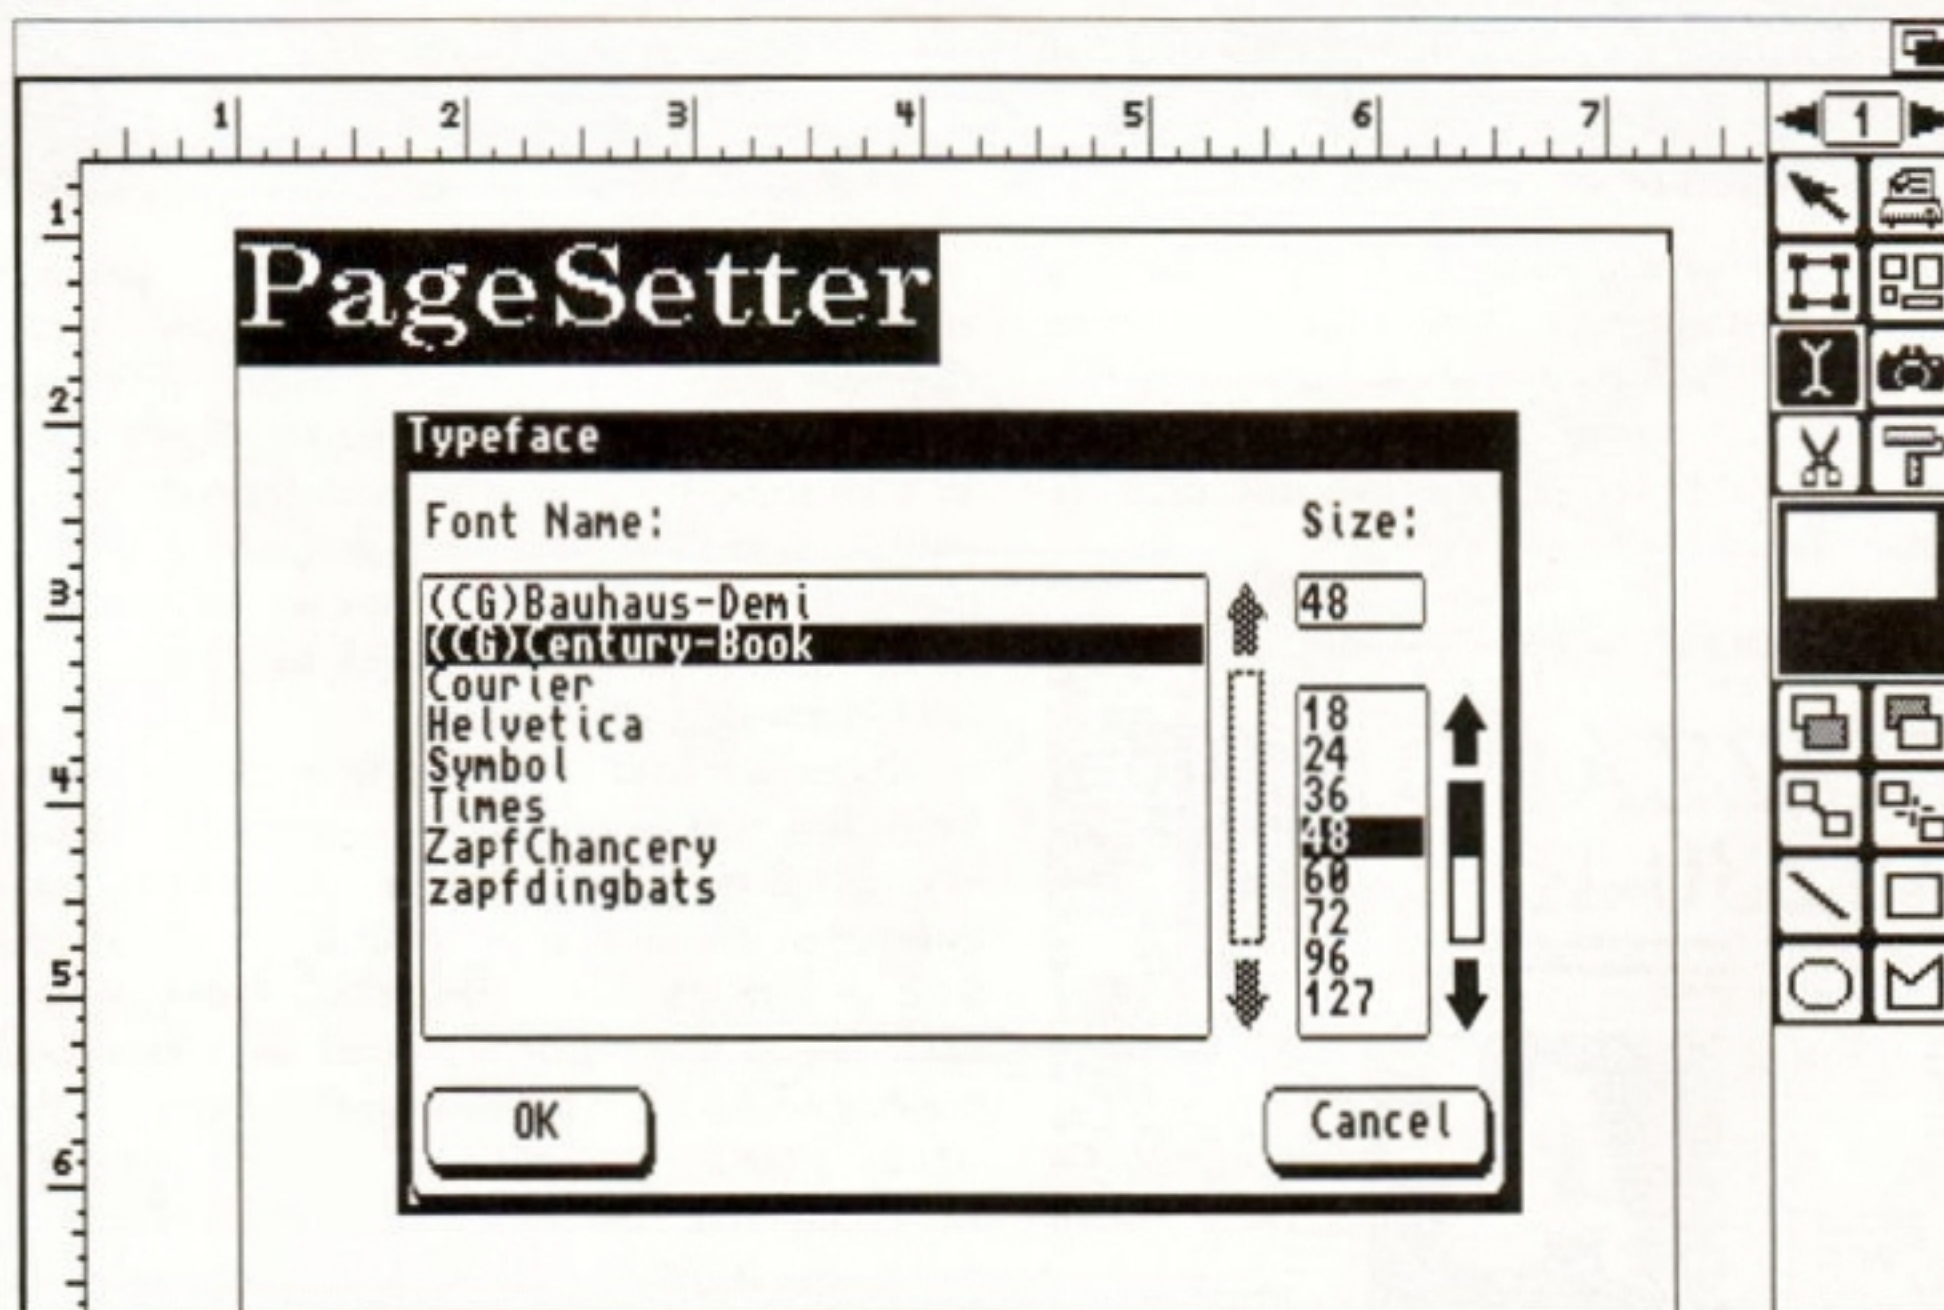

An important ingredient of any page layout is the text and this is an area in which *PageSetter 2* provides extensive control. Not only can you edit text by marking blocks, cutting, copying and pasting, but you're also given a considerable amount of control over the appearance of text – you can change the typeface, size, style and so on.

Entering text into a box is easy. Create a new box, click on the Text mode gadget on the toolbar and then click on the box into which you wish to enter text. A little flashing line then appears inside the box. You can now type some text.

To change the typeface, select the text you've just entered by clicking on the first character and then – while holding down the left mouse button – move the mouse pointer to the last character and the colour of each character is reversed to indicate that they have been marked.

Once the text you wish to alter has been marked, select the Typeface option from the Type pull-down menu. A font requester then pops up on to the screen containing a list of all available fonts. If you booted from our Coverdisk, this contains eight different fonts.

Two of these fonts are preceded by (CG), which stands for CompuGraphic. These fonts are outline fonts and they are different from normal Amiga bitmapped fonts because they can be scaled to any size with no loss in quality whatsoever. What's more, they are printed at the maximum resolution of your printer.

*PageSetter 2* provides extensive control over the typeface, size and style of the text within your layouts.

You'll notice that alongside this list of fonts is a list of sizes ranging from 6 to 127 point. These provide a quick and easy method of defining the

point size of your text. You can, if you wish, enter the point size directly into the gadget immediately below the Size label.

## THE PAGESETTER TOOLBAR (A CLOSER LOOK)

1. Although you can only edit one page at a time with *PageSetter* your documents can consist of as many single pages as you want. This gadget enables you to flip back and forth between pages within a document containing two or more pages.

2. If you own a printer, a quick click on this icon displays *PageSetter 2's* printer options requester, which provides extensive control over the printing process. You can, for example, print the current page or the entire document, alter the dithering or the print density (the greater the density, the higher the print quality) and so on. Once you're happy with the settings, click on the OK gadget to send your pages to the currently-selected Preferences printer.

By default, the *PageSetter 2* program disk is set up to use the EpsonX printer driver (suitable for nine-pin Epson-compatible dot matrix printers), and so you'll need to change this using the Preferences program on the *PageSetter 2* disk in order to use a different printer driver with the program. Included on the disk are drivers for 24-pin dot matrix (EpsonQ), HP LaserJet printers and a whole host of other makes and models.

**15. The Null Pointer gadget is used to move and size boxes on the screen. Clicking on this gadget turns off any other tools that may currently be active.**

**3. This strange-looking gadget is the box selector.** This tool allows you to select a box (or several boxes) simply by dragging a rectangle around them. Any boxes inside the rectangle are then automatically selected.

14. By default, *PageSetter* creates one or more boxes for you but you will almost certainly require more if you wish to add pictures, headlines and boxouts to your layout. Clicking on this gadget turns on *PageSetter's* Box Create tool. Once selected, move the mouse pointer over the page, click and hold the left mouse button and then drag out the box to the desired size and shape. Once you're happy with the new box, let go of the left mouse button and the box is accepted.

4. The Copy gadget is used when the text tool is selected. By marking a piece of text within a box, it can be copied into a temporary buffer for later use.

13. Clicking on this gadget turns on *PageSetter's* Text Edit mode. Once selected, the mouse pointer changes shape. If you then click on the box into which you would like to enter text, a small cursor appears inside the box. When you type characters on your Amiga's keyboard, the text appears on your page.

5. If you have a section of text stored in *PageSetter's* temporary buffer (say, for example, you've copied a block of text from elsewhere on the page or you've loaded some raw text from disk), clicking on this gadget pastes the text into the currently-selected text box. Note that the Text gadget must be selected and a text box must be activated for this to work.

12. This gadget enables you to cut a marked section of text from within a text box. The deleted text is stored in *PageSetter's* temporary buffer.

6. When looking at a page in the higher magnification levels, it may not always be possible to view the entire page. This gadget controls which part of the page is displayed. Simply click on the white box and – while holding down the left mouse button – drag it in the desired direction.

**11. Clicking on this gadget brings the currently-selected box to the front of all the other overlapping boxes.**

7. If several boxes are overlapping, clicking on this gadget sends the current box behind all of the overlapping boxes.

10. Two text boxes can be linked together so that when text is flowed into one, the text is automatically reflowed into the second when the first is full. To link two boxes, select the first box, click on this gadget and then click on the second box.

**9. PageSetter 2 provides a selection of tools for drawing structured graphics directly on to your pages. These tools come in handy when you need to add simple illustrations to your layouts. Four tools are provided – box, polygon, circle and straight line.**

8. *PageSetter 2* enables you to link two or more boxes together so that when text is flowed into the first box, it automatically reflows into the second box when the first one is full. If you want to break the link between two boxes, click on this gadget and then click on the box which you wish to unlink. If there are any further boxes linked to this box, the box which you have unlinked becomes the first box in a new chain of linked boxes.

# OPERATION G2

Are you ready to battle with rogue robots on a radio-active spaceship in our fab Coverdisk demo?

## BEFORE YOU START

This is a self-booting disk which requires 1Mb. Control is via a mouse. The left mouse is used for travelling forward and picking things up. Use the right button for reversing.

The scene: some time in the future in a Galaxy near the Milky Way, not too far from Mars – and things are far from sweet. For space is littered with the wrecks of radioactive spacecraft and as a member of the De-Con Division (which sounds better than it is), your job is to nip on board and explode the old crates. Then your boss hands you Operation G2, a ship full of contraband medical supplies worth a fortune. Unfortunately, it's protected by a band of corps known as the Simskin Revenue Protection droids, who don't bother to ask questions, they simply waste you.

Your guide to how to find your way around G2: 1) Time bar. 2) Energy bar. 3) Pressure plates. 4) Pockets for storing pick-ups. 5) Right hand. 6) Hand icon for picking up objects. 7) Left hand.

The key card terminals are located next to doors. If you have a key card, it may open this particular door. Click on the card (1) and then on the terminal (2). Also on screen is your remaining ammo (3) and the scanner (4).

Viewed in first person perspective, our exclusive demo, published by Liverpool softies Psygnosis, combines strategy with arcade action. There is a time limit of approximately seven minutes to complete the mission – that's if you don't run out of energy first. The idea is to explore the corridors while collecting extra pick-

ups such as key cards which enable you to unlock doors to explore the ship further while simultaneously blowing away the enemy droids.

The first thing you need to do is pick up the pistol (you may find a shotgun later on), but be careful, you only have a limited amount of ammo. You can operate the gun with either the left or right mouse button – we've found the right hand works best because you use the left to direct yourself around the ship.

Many of the doors on board are locked; you can open them either by travelling over pressure plates or collecting key cards which you can pick up off the floor and store for later use.

The pressure plates are circular and sometimes open or close doors elsewhere in the complex – they can also spin you 180 degrees without you realising. You may have to spend some time experimenting. Other pick-ups include extra ammo, food and shields.

We haven't given you a step-by-step guide through the demo because it's best that you discover the intricacies for yourself. So can you rid the ship of aliens in the allotted time?

## WIN OPERATION G2!

We've got 25 copies of Psygnosis' Operation G2 to give away.

Simply answer the following questions and jot the answers on a postcard to arrive no later than Thursday September 29.

1. Name five Psygnosis games.
2. In which city in the North West of England are Psygnosis based?
3. Who are the most famous pop group to come out of that city? (And it's not Frankie Goes To Hollywood.)
4. Name G2's enemy droids.
5. Which small species of animal have a propensity for throwing themselves off cliffs?

Send your entries to:  
G2 Competition,  
Amiga Format,  
30 Monmouth Street, Bath, BA1 2BW.

The key card terminal. To use the terminal, click on the key card pocket (2) and pull the card over the slot (3). If it's the correct card for the terminal, numbers will appear. Click on the green button (1) and the locked door will open.

# AMIGA FORMAT COVERDISK

**GOT A PROBLEM WITH  
YOUR COVERDISK?**

**CALL  
091-385 2627**

**It's inevitable that some readers will have a few problems using their Coverdisks. Here we answer some of the questions which crop up most.**

## EXTRA!

### PROVECTOR AF58

There is nothing wrong with this one. It uses the ARP.library, as do many other Amiga programs.

This library, like all other libraries, has to be located in the LIBS drawer of the start-up disk. If you are booting up from Workbench, this is the LIBS drawer on that disk.

The ARP.library is provided with the disk, in the LIBS drawer, so you can just copy it to your boot-up disk. For example, put the *ProVector* program disk in the drive and type:

```
copy df0:libs/arp.library      Libs:
```

Also, for those of you who have been in touch with printing queries – imported bitmaps are not supposed to print out. *ProVector* uses standard Workbench drivers.

### MUSIC-X AF58

We've had a few people write in who have been having problems with *Music-X*, particularly A600 owners. All A600 owners, and anyone else who has got only Chip RAM, should follow the instructions for installing *Music-X* on the A1200, otherwise you'll find that you haven't got much room for samples.

Also, many people seem to be getting a message regarding missing fonts. The fonts are definitely on the disk, OK! If you boot up from the *Music-X* program disk, like it says to do in the instructions, there's no problem.

If you want to boot off any other disk, copy the font into the FONTS: drawer of your boot-up disk. This is not complicated – it is how the Amiga works (and the PC and the Mac).

### INDEXER AF59

There are several stages to getting this up and running. After decompressing the disk, copy the fonts to the FONTS:

drawer of your start-up disk, the libraries to the LIBS drawer and make the Assign command.

If any one of these things isn't done, the program crashes or won't be able to find the data: Assign Indexer: DF0:xxxxx (Where x is the pathname where you installed indexer.).

```
Copy Indexer:fonts/#? fonts: ALL
```

```
Copy Indexer:libs/#? libs:
```

### DEMO MANIAC AF60

Unfortunately there are quite a few problems with this Coverdisk, because Black Legend gave us a very bug-ridden product. If you are getting unexplained gurus, the most likely cause is a software bug.

## NEXT MONTH!

Next month we will be having a special Desktop Video issue, and to go with it, our Coverdisk will contain the Amazing *TV\*Text Professional*, worth £130! *TV\*Text Professional* is a brilliant character generator for providing top quality captions and titles for video work.

With powerful special effects and impressive drawing tools as well as superb anti-aliased font control, *TV\*Text* enables you to create professional video titles and presentations – and it can be all yours if you buy the next issue of *Amiga Format* which goes on sale on Thursday September 22. Don't miss it.

## HOW TO CONTACT

### AMIGA FORMAT

The best way to get an answer from *Amiga Format* is to make sure you're addressing your letter to the right person (or, indeed, department)...

- We get hundreds of letters and faxes a day, so we can't reply in person.
- *Amiga Format* is available for enquiries by telephone every Tuesday between 10.30am and 6pm, but please make sure your call is really necessary.
- Our advertising complaints department can help with problems

with companies who advertise in AF if you phone during office hours.

- Our subscriptions service and the *Amiga Format* Mail Order department can be contacted on 0225 822511.

**WORKBENCH:** If you have any problems with the technical side of your Amiga, with hardware or with serious software, Nick Veitch will answer you in the mag. If you have advice or tips for other readers send them in and you could win a prize.

Workbench, *Amiga Format*, 30 Monmouth Street, Bath BA1 2BW.

**GAMEBUSTERS:** If you've found a cheat mode, mapped out the levels, or found all the passwords for the latest game, send the info to Steve Bradley

and you could win a prize. Or, if you're stuck, ask Helping Hand for advice.

Stephen Bradley, GameBusters, *Amiga Format*, 30 Monmouth Street, BATH BA1 2BW.

**READERS' LETTERS:** The letters pages are there for you to air your views and share your opinions; please remember not to ask questions that should be in Workbench!

Letters To The Editor, *Amiga Format*, 30 Monmouth Street, Bath BA1 2BW.

**COMPETITIONS:** To enter a competition, write the answers and your name, address and phone number on the back of a postcard.

Whatever Competition, *Amiga Format*, 29 Monmouth St, Bath BA1 2DL.

**SPECIAL OFFERS:** If you've ordered something from the AF Mail Order and you've got a problem, call our Mail Order department on 0225 822511.

*Amiga Format* Mail Order, Future Publishing, FREEPOST (BS4900), Somerton, Somerset TA11 6BR.

**SUBSCRIPTIONS:** If you have any subscription enquiries then write to: *Amiga Format* Subscriptions, Future Publishing, FREEPOST (BS4900), Somerton, Somerset TA11 6BR.

**FAULTY COVERDISKS:** If you have a faulty disk, DON'T return it to us, send it, enclosing an SAE, to: DisCopy Labs, Units 2 & 3, Omega Technical Centre, Drayton Fields, Daventry, Northants NN11 5RT.

Customers outside the UK add £4.00 for overseas delivery.

# NEWS

# COMM

# R.I.P

**B**y the time you read the next issue of *Amiga Format*, Commodore will be no more – or at least the Commodore logo will be no more.

With the deadline for the buy-out set at August 31/September 1, the most likely result is that the Commodore management team – with the backing of an as-yet unknown investor – will be successful in their take-over bid.

Joint MDs of the UK branch – Dave Pleasance and Colin Proudfoot – and two top execs of Commodore International Ltd are bidding for the rights to manufacture, sell and market Commodore products worldwide.

The new company will ditch the ill-fated Commodore logo in favour of Amiga branding – Amiga International is one suggestion – and shift control of the company to Commodore's UK headquarters in Maidenhead.

After 36 years, the only vestiges of the American Corporation and its European subsidiaries will be the UK headquarters plus its Research and Development centre at Westchester, North Carolina in the US.

With the closure of Commodore's Philippines plant back in April, obviously a new production

facility is also needed. The decision has already been made to bring manufacturing to the UK, and news has reached *Amiga Format* that one candidate is the defunct Timex Plant in Dundee, Scotland. The workforce and US parent company were

involved in a bitter dispute for several months before the plant was finally closed down on October 14 last year.

Having a plant 450 miles up the road, rather than 9,000 miles away, does make a lot of sense.

AMIGA

David Pleasance (left) and Colin Proudfoot: the joint MDs of Commodore UK and soon to be joint MDs of a new company (Amiga International, perhaps?). So take a long, lingering look at the Commodore 'C' because by the time you read these news pages, this ill-fated logo will be breathing its last. But you can be sure that the new company is sure to make the most of the Amiga name.

## COMMUNICATION STATIONS

If you read Richard Baguley's piece on superfast modems last month, you'll have been wondering where you can lay your hands on this sexy hardware.

Well, Siren Software now have supplies of the Speedcom range of modems. These next generation modems come in three flavours: the Speedcom+B (V.32bis: 14,400 bits per second); Speedcom+Et (V.32 turbo: 19,200bps); and, best of all, the Speedcom+Bf (V.fast: 28,800bps).

All three devices sport extensive user-friendly features such as fax group III compatibility, auto-detection of speed and dialling conditions and all come with a 12 month warranty. And they come in lovely sleek boxes, too.

Prices range from £140 for the +B up to £230 for the V.fast. So get on the blower and call Simon Cobb at Siren Software on 061-724 4893.

## MAG.NET

And while we're on the subject, Net surfers should look out for a new magazine from Future Publishing, the makers of *Amiga Format*.

.net – The Internet Magazine aims to be the AA Route map of the

**.net**

Net surfers should be on the look out for this logo in a newsagents near you soon.

Internet; the Traffic Cones Hotline of the InfoBahn, so to speak. Launch editor Matt Bielby (*Super Play*, *PC Gamer*) and his crew will be signposting the best locations, helping lost souls to get back on line, and generally making sense of the communications revolution.

Super-slick, super-fast. Speedcom's new range of high-speed modems should be the answer to Comms users with phone bills the size of pelicans'. (Bills, that is).

# COMMODORE

It finally looks like Commodore's blue 'C' is all washed up, but the Amiga name will live on. Steve Jarratt reports on the end of an era.

Pending a resolution to the management buy-out of Commodore, the long-awaited CD1200 should be hitting shops this Christmas.

Oddly, Commodore also used to operate an A4000 manufacturing plant in Scotland a few years ago.

Along with the Commodore name and logo, the other sections of Commodore to get the chop include the offices in Germany, Denmark and Italy. The sales and distribution offices in Australia, France, Belgium, Switzerland and Austria have not been operational for some time.

However, the European market will still have an important role to play in the Amiga's future: as reported in trade paper *CTW Europe*, sales of the Amiga in Germany are still very strong, with

potential Amiga sales of up to 20,000 A4000s and 80,000 A1200s a year.

Dave Pleasance states that as soon as the new company is up and running they will be looking for distributors in those territories where Amiga sales were traditionally strong. There will be plenty of product, he said, but it will just be distributed by companies other than Commodore-owned subsidiaries.

**The future of** the Amiga – for the foreseeable future – looks promising. The A1200 still has no real competition, since PCs and Macs are more expensive and are reliant on using specialised monitors, rather than TVs.

New A1200 and CD<sup>32</sup> bundles will be in stores in time for the Christmas crush, and developers have been told that the CD1200 CD-ROM drive will also be gracing the tinsel-draped shelves. Of course, the coupe de grace would be if the company could manage to bundle an attractively-priced A1200 plus CD-ROM unit in time for the Yuletide cashfest.

No new machines (a CD-based 1200, for instance) will appear before Spring of 1995, but R&D on new systems continues and if the next generation of Amiga technology is as good as rumour suggests, the Amiga could once again carve a sizeable niche for itself in the market. ☺

## Video pictures

A VHS slideshow video entitled *Digital Gallery* is being compiled and the authors are currently looking for entries. Designed to show off the very latest in digital artwork across all formats, *Digital Gallery* will give Amiga artists and animators the chance to exhibit their work to a wide audience.

All entries are welcome, but there is a catch in that there's a £20 charge for having your work included. If you feel this is a small price for fame, send a 3.5 inch disk containing your artwork, and include your name, the name of your piece and a postal order or cheque payable to Pumeco. Oh, and don't forget to mark the back of your envelope 'DB' (for office use).

The four-hour, two-video pack will go on sale around Christmas. To make sure there's still room for your masterpiece, call L Bannister at Pumeco on 0482 500597.

Have you created some Amiga artwork you're really proud of? Perhaps the *Digital Gallery* slideshow video could be your chance to show off!

## The Jeff Walker Column

**W**ith all the doom and gloom around at the moment, and I've certainly done my fair share of the mongering, it's about time I reminded everyone, and myself, of what a great computer we are all privileged to be using. When you bought your Amiga I doubt if you did so because you appreciated the intricacies of the Operating System and understood the benefits of multitasking. You bought it because it was the right price and because it looked like a pretty neat computer.

I never experienced the pleasure of buying my first Amiga. An A2000 was dumped on my desk – no manuals apart from the (ho! ho!) user handbook, 1Mb of memory, a 20Mb hard disk that could not be booted from – and I was told to get on with it. Within 30 minutes I was messing with the startup-sequence. Within 60 minutes my A2000 couldn't be booted from floppy either. By midnight I knew more about the Amiga's startup-sequence than I knew about my girlfriend.

Anyway, what I learnt in those first few hours of Amiga ownership was that I had a very special computer. Because I had no proper manuals, and because I was supposed to be the techie expert, I had to put the pieces back together by working out what everything in the startup-sequence was doing. I quickly learnt that, although you wouldn't think it to look at it, this beige box was juggling a dozen or more balls and keeping them going at breakneck speed with one hand tied behind its back.

That A2000 was running Kickstart and Workbench 1.2, and even the most vigorous Amiga defenders look back now and say how awful that version of the Operating System was. But at the time they (and I) thought it was brilliant. Most of us have forgotten how much we liked it. Sure, we could see that there was room for improvement, but what it did was already more than enough to waggle at Atari ST owners and say betcha can't do that. And the only serious criticism they could come up with was that the Amiga didn't have a MIDI port. Some of us had to find out what the hell a MIDI port was before discovering that we needed one about as much as we needed the serial port that you plugged a strange and expensive box called a modem into.

Now the Operating System has got even better, and to give just one trivial example of the magic of the Amiga, look at the fun we can have customising our "user environments". I run one small program at boot-up and I get 3D menus that pop-up under the mouse pointer. I run another small program and my cycle gadgets are turned into drop-down menus. Another program automatically puts all my most-used programs into a single window on the Workbench, and when I click their icons they animate and play a sound at me.

The Amiga's Operating System takes all this "mucking about" and much, much more in its stride. It really doesn't care, so provided programmers stick to certain rules they can invent their own additions to our graphical user interfaces.

What does this cost us? At the most, the price of a few PD disks. You can't muck about like this on other platforms, and even if you could, a dozen of these small programs would probably set you back a few hundred quid.

So, I don't really know why nearly all Amiga journalists, and nearly all hard core Amiga enthusiasts, have at one time or another berated Commodore for not taking advantage of the Amiga's potential. What is it that we want? Don't ask me. But whatever it is, I'm sure that if we got it we would only want something else. Because that's the beauty of the Amiga, that's what we are all forgetting – this machine can do anything.

In the early days one of the most impressive things the Amiga could do was rescue data from a corrupted floppy disk. The salvaged disk always got renamed as Lazarus, the guy JC raised from the dead. Today the Amiga has a similar miracle to perform, it has to raise Commodore from the dead. It can do it. Really it can. It's that good. This time next year we'll be looking back and wondering what all the fuss was about.

**THE OPINIONS EXPRESSED HERE ARE NOT NECESSARILY THOSE OF AMIGA FORMAT**

## The Tim Smith Column

**A**fter a few months on the Internet, I have realised that postings to Usenet and especially on comp.sys.amiga.misc or comp.sys.amiga.advocacy should be taken with a Lot's wife-sized pinch of salt. However, recent rumours – primarily those in the last issue of *Amiga Format*! – have suggested that an Amiga-on-a-card might be forthcoming for the PC.

It's worth thinking about when you consider that the Amiga can emulate the PC (and the Mac for that matter), but that the poor old MS-DOSers can't play away themselves. If such a card did bounce into existence then all the PC-heads out there with their 80MHz Pentium monsters clipping along with more MIPS than the Road Runner on speed could finally discover the joys of a real multitasking Operating System.

The fact that Windows is a massively globally perpetrated plot by RAM manufacturers and not a GUI at all would be revealed. Millions of PC users would slap themselves around the faces, scream 'Mea culpa! Mea culpa! Mea maxima culpa!', the sun would shine, the lion would lay down with the Attenborough, joy would abound. This would be the ideal way to proclaim the Amiga's technological advantages.

It is **probably** also the only way in which the notoriously conservative PC-using community will ever realise the delights of the Amiga. But how to go about marketing it? Well, the basic principle seems to be if it's on a card and you've got to muck around for a few hours re-configuring autoexec.bats, config.sys, RAM, EMM, and so on before you get any spark of life out of it then it's OK by me buddy!

So, I suggest that the only way to produce an Amiga-on-a-card that would sell to its target market would be as follows:

- 1) Charge £749.99+ for it (make sure there's also VAT hidden somewhere on the advert).
- 2) Put it in £150 worth of packaging with at least 12 different registration cards all of which must be sent to Bullsville, Squeal-Piggy County, CA, USA.
- 3) Ensure that it will only run under Windows but that you have to configure it from DOS (preferably a new version).
- 4) Ensure that it will only run under 12Mb of RAM.
- 5) Call it *AmigaBlaster Pro+*.
- 6) Include a manual in Italian, German, American and Uzbek.
- 7) Include a pretty picture of a planet on a starry background on the packaging.
- 8) Ensure that at least 10 screw-holes are included, but only nine screws.
- 10) Make the bubble-wrap pink with no visible way in. Oh, lob in *Deluxe Paint II*, *Kick Off I* and *Workbench 1.1* to give them some idea of what they can achieve (we wouldn't want to shock anyone out of MicroSerfdom too soon) and I think we're on to a winner here. But then again maybe it's still too cheap.

On a final and personal note, I have an admission to make – I anthropomorphise. Yes, I know that as a professional computer-type person I shouldn't think of my Amiga as if it were a living, breathing creature but I can't help myself. Even worse, I need some advice on my habit. My Amiga's df0: is crocked. I've managed to get the hard disk working by fiddling a little and then saying: Come on Henry-Hard-Disk, work or I'll defragment you, honest. Bingo! But Derek-the-df0: stubbornly refuses to function. Am I calling it the wrong thing? Is a promise of the latest *Amiga Format* Coverdisk not enough? What does anybody else do? Please help.

**THE OPINIONS EXPRESSED HERE ARE NOT NECESSARILY THOSE OF AMIGA FORMAT**

# FES UPDATE

**I**t's less than 10 weeks to the Future Entertainment Show and things are really starting to roll. As we so lucidly pointed out in the last issue, the FES is the ideal opportunity to have a day out, surround yourself with high technology, meet the *Amiga Format* team, garner some vital hints and tips from our informative Amiga seminars, play the very latest games and pick up a few bargains. Then, weary but happy, you can wend you way back home clutching a pristine copy of *AF65*, which arrives, hot off the presses, that very same day.

## JUST THE FACTS...

The FES '94 will take place at Earls Court 2 in London from Wednesday 26 to Sunday 30 October. Tickets cost £6 (£7 on the day) and are available from the FES hotline: 0369 4235.

Heats of the National Games Championships start from August 1, and run from 10am to 12 noon, and 2pm to 4pm. Entry fee 50p. Call 0891 332288 for the location of your nearest Future Zone store.

But seriously, the *Amiga Format* crew are dedicated to making the Amiga area of the FES well worth your attention. Already the Amiga Theatre has some star attractions where you can learn about art and music on the Amiga. We're hoping to present tutorials on *Imagine* and *Lightwave*, and hold seminars on electronic music, both MIDI and Amiga-based. We'll also have some top Amiga experts on hand to answer your questions on all things Amiga, from DTP to games.

The FES also provides an ideal opportunity to cast a dubious eye over the non-Amiga world, with all the latest consoles and multimedia kit from the US and Japan on display.

But whatever you see and whatever you do, you'll be certain of a thrilling day out. See you there!

## SOFT-LOGIK PLEDGE PAGESTREAM SUPPORT

Soft-Logik's long-awaited *PageStream 3.0* promises to be the best DTP package ever!

**W**ith the announcement of new upgrades for *PageStream* and *TypeSmith*, Missouri-based software house Soft-Logik have also pledged continued support for the Amiga well into the next century. Their next project will probably be an upgrade of *Art Expression*, although after labouring on *PageStream 3.0* for almost two years, it's possible the 13-strong company will take it easy for a while!

The long-awaited *PageStream* upgrade is an all-new written-from-scratch program, containing over 1,000 new features. Among the most notable additions are customisable floating palettes, auto-scroll and auto-drag, extensive typographic control, object-oriented drawing tools and full colour AGA screen rendering.

The authors consider this to be the best DTP package available on any machine, and at just \$399 (£266) it's a considerable saving over the similarly-specced *Quark XPress* for the Mac which costs around £600!

Designed with the AGA chipset in mind, *PageStream* has full-colour screen rendering.

Soft-Logik already have 2,000 upgrade orders and plan on shipping around 1,000 full copies.

The *PageStream 3.0* package comes with the *PageLiner 2.0* text editor, *BME 2.0* picture editor and autotracer, over 60 fonts and a collection of clip art. And, after what seems like an eternity of waiting, *PageStream 3.0* begins shipping on August 15, so you can expect a full review in *AF64*.

Soft-Logik's font editor *TypeSmith* also gains a host of new features such as support for TrueType fonts and improved *ARexx* commands.

When so many developers are looking to other machines for their income, Soft-Logik are continuing to support the Amiga. Company president, Deron Kazmaier, states that "With Commodore's recent troubles, some people have wondered if we'll continue to develop *PageStream*. Rest assured, we intend to continue developing *PageStream* and other exciting desktop publishing tools into the next century."

# NEWS brief

## FUTURE ENTERTAINMENT SHOW FACTS AND FIGURES

### Everything you ever wanted to know about FES '94

- How much does it cost to get in?  
£6 in advance (by sending off one of the coupons you'll find in the ad on page 127 of this issue) or £7 on the door.
- Is there a discount if I bring loads of people?  
Yes. If you book in advance for a party of 10 or more people, then each ticket is only £5!
- Can I book with a credit card?  
Yes. The credit-card hotline number is 0369 4235 (yes it looks like there's a number missing, but there isn't).
- When and where is the show?  
Earls Court Exhibition Centre Hall 2, Warwick Road, London SW5. The show will be open from Wednesday 26 to Sunday 30 October 0930-1730 (Sun 0930-1700).
- How do I get there?  
By train: The nearest Underground station is West Brompton - Wimbledon branch only (this station is closed on Sundays) or Earls Court Station - District and Piccadilly lines.  
British Rail - Kensington Olympia station is serviced by a daily high-speed InterCity schedule linked with North West and South East England.  
Buses: Earls Court is served by bus routes 74, 31, 249, 349 and C3.  
Taxis: A convenient set-down and pick-up facility is available for taxis.
- Will I be able to try new software and hardware as well as watching demos?

Absolutely! This year's show will give you a chance to get your hands on the hottest new products and give them a test drive yourself.

- Will I be able to buy stuff there?  
Of course! There's a huge dealer-area where you'll be able to get an excellent price on virtually any piece of hardware or software you could be after.
- What's happening in these theatres?  
Future Publishing's magazines will be organising special events in the three theatre areas at the show. There will be discussions, demos and debates featuring some of the interactive entertainment industry's leading figures. There'll be items like expert panels/joystick juries reviewing products live, discussions about the future of interactive entertainment and exclusive premieres of many of the biggest products of 1995.
- How can I make sure I don't miss anything when I'm at the show?  
There'll be a showguide on sale on the door (for £2) containing a full list of all exhibitors, a map of where everything is and (this is the best bit) a set of vouchers offering discounts off gear that you can buy at the show.
- Can I order a showguide in advance then?  
There's a box on the coupon on the FES ads offering the chance to have a showguide reserved for you. All you have to do is tick the box and when you receive your tickets, you'll get a voucher which you can use at the show to get your showguide. For ordering one in advance early, you get 50p (25 per cent!) off the £2.00 showguide price. You can also order one through the hotline.
- Are there facilities for disabled visitors?  
There are full facilities for wheelchairs.

## REAL TIME VIDEO

Mastering the complexities of Real 3D v2.0 is about to get easier with a series of tutorial videos from Avongard Video Guides. Three videos are available now with two more to follow, covering all aspects of 3D animation. Each vid costs £39.00 and can be ordered from Activa International on 010 44 71 371 5873.

## CIRCUIT BREAKER

With the advent of surface mount technology in A600 and 1200s, DIY repairs are history. However, if your machine is poorly, Hawkwell Electronics now have the specialist equipment needed to carry out circuit repairs.

So, if you've got a busted 'puter call Hawkwell Electronics on 0702 207593; fax 0702 207274.

## GET A LIFE

LIVE '94 will be held at Earls Court from September 20-25. If you're into video games, large screen TVs, Surround Sound systems, synthesizers, AV amps, computers, hi-fi, cameras, CD players, camcorders or VCRs, make a bee-line for the Court next month. The show kicks off at 9.30am and tickets are available from the LIVE '94 hotline: 0891 500103.

## CHROMA KEY

Firstly, Chroma are driving a fundraising initiative aimed at people involved with a registered charity, school or similar organisation. Secondly, if you have a PD program that's getting too big to be PD, or have a program that you'd like to sell commercially, talk to Chroma. And thirdly, *Smarty Paints* will be on sale in software shops for £29.99 - that's a whole penny off the usual price!

Contact Steve Hall at Chroma on 0328 862693.

## NEXUS DISC

There's a new CD-ROM disc that video and multimedia fans might find interesting. The Nexus Pro Multimedia reference Library contains 750 24-bit JPEG and 256-colour images, 300 CompuGraphic scalable fonts, 100 16-bit sound samples and a host of PD utilities.

The Nexus Pro CD-ROM disc costs £49.99 and can be ordered from Videoworld on 041-641 1142.

## MICRO PROSE

Arrival Press are compiling a book of computer poetry. Editor Trudi Ramm (!) is looking for contributions. So if you think you have a bit of the Bard in you, send your silicon chip-related sonnets to Arrival Press, Computer Bards, 1-2 Wainman Rd, Woodston, Peterborough PE2 7BU, to arrive no later than Sept 16.

## NEW OUTLET

Magnetic Fields have opened a shop. Called FX Multimedia, it stocks CD-ROM discs for the CD32 and the PC, plus the full range of Magnetic Fields disks. Pop along to FX Multimedia, 60 Eldon St, Preston, Lancs PR1 7PJ. Tel: 0772 257776.

## COMPUTER GRAPHICS SHOW

From November 8-10, the Wembley Conference Centre plays host to Computer Graphics Expo '94 - the UK's premiere event for digital artwork, animation, VR and special effects, and is the biggest show of its kind outside of Siggraph in the US.

Supported by major computer graphics companies such as Silicon Graphics, Division, Abekas Video Systems and Mitsubishi Electric, and in association with Siggraph, the aim of the show is to highlight the potential of today's low-cost graphics systems and to generally be a celebration of the art of the computer.

Possibly of more importance to *Amiga Format* readers and Amiga users is the Interactive Entertainment Developer's Forum, which aims to bring developers, programmers, artists and musicians together from across Europe. If you have a game design, soundtrack, demo or animations why not come along and peddle your wares?

Computer Graphics Expo '94 is a trade event, but *Amiga Format* has secured complimentary tickets for AF readers. Look out for special cut-out-and-keep tickets in a future issue.

Computer Graphics Expo '94 is the premiere UK showcase for the latest in digital artwork, 3D graphics and virtual reality. And *Amiga Format* readers can go for free!

# COMPUTER WORLD

## AMIGA 1200 BUNDLE

### COMPUTER COMBAT & INNOVATIONS

Inc. Total Carnage (AGA), Brian the Lion (AGA), Zool2 (AGA), Wordworth (AGA), Print Manager (by Digita), Day by Day (Filofax Organizer), Personal Paint 4.

# MAKE *the* headlines

**An Amiga, a printer and your PageSetter 2 Coverdisk are all you need to get started in DTP. Asam Ahmad shows you how to get the most out of your DTP software.**

Over the last 10 years there has been a revolution in the printing and publishing industry which has meant that more people have the power to create their own posters, leaflets and literature. Now you have the *PageSetter 2* Coverdisk, you are one of those people.

But in the early days of desktop publishing the computer's role was usually limited to the typesetting stage, where items of text were formulated into columns on a page which were then manually pasted up by hand to form a finished page. This page, complete with pictures and text, was used as camera-ready artwork from which a film and then a metal plate were made. This was then used on the press to print the page.

*"The leading DTP packages have features that make it easy to create stunning results."*

The whole process used to take several hours for each stage, until the computer's role became more prominent and DTP programs took over the burden of most of this time-consuming exercise.

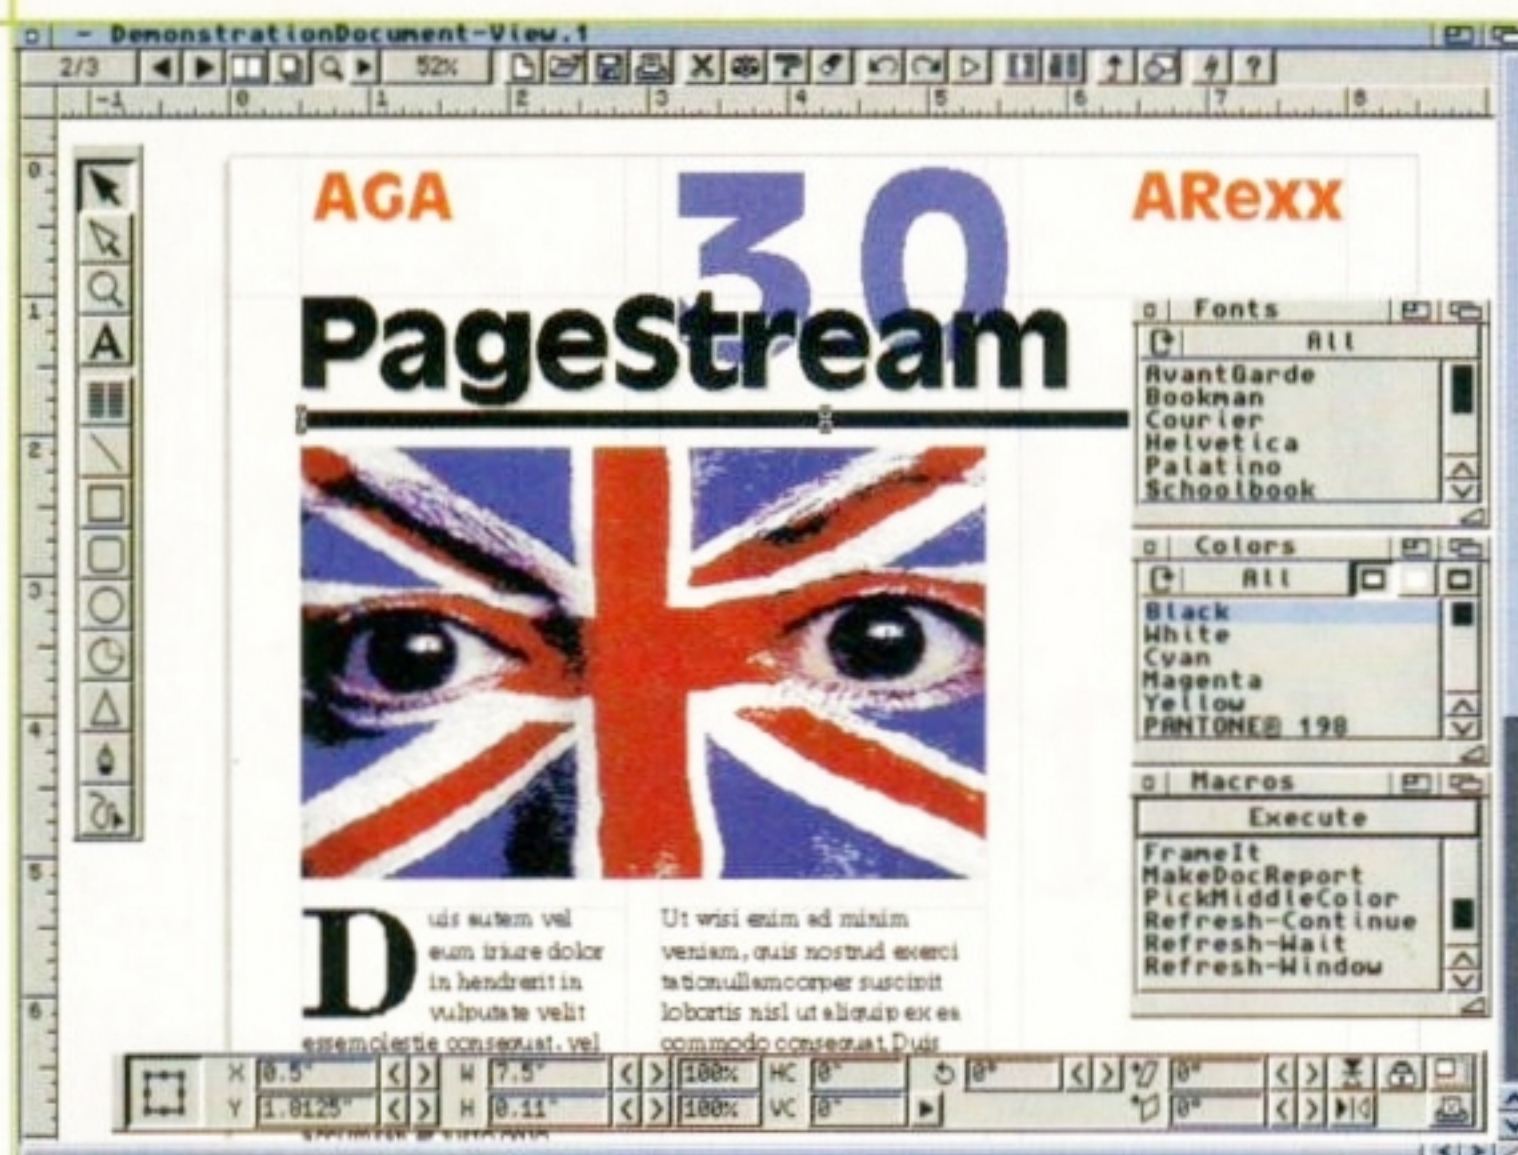

The Amiga has its own share of good DTP packages, including *PageSetter*, *PageStream* and *ProPage* and the latest versions of all these packages have features that make it easy to produce stunning productions with the minimum of fuss.

But there's a lot more to DTP than just putting words on a piece of paper. The way that your text is presented can have a beneficial impact on the reader if it is done correctly. Even word processors give

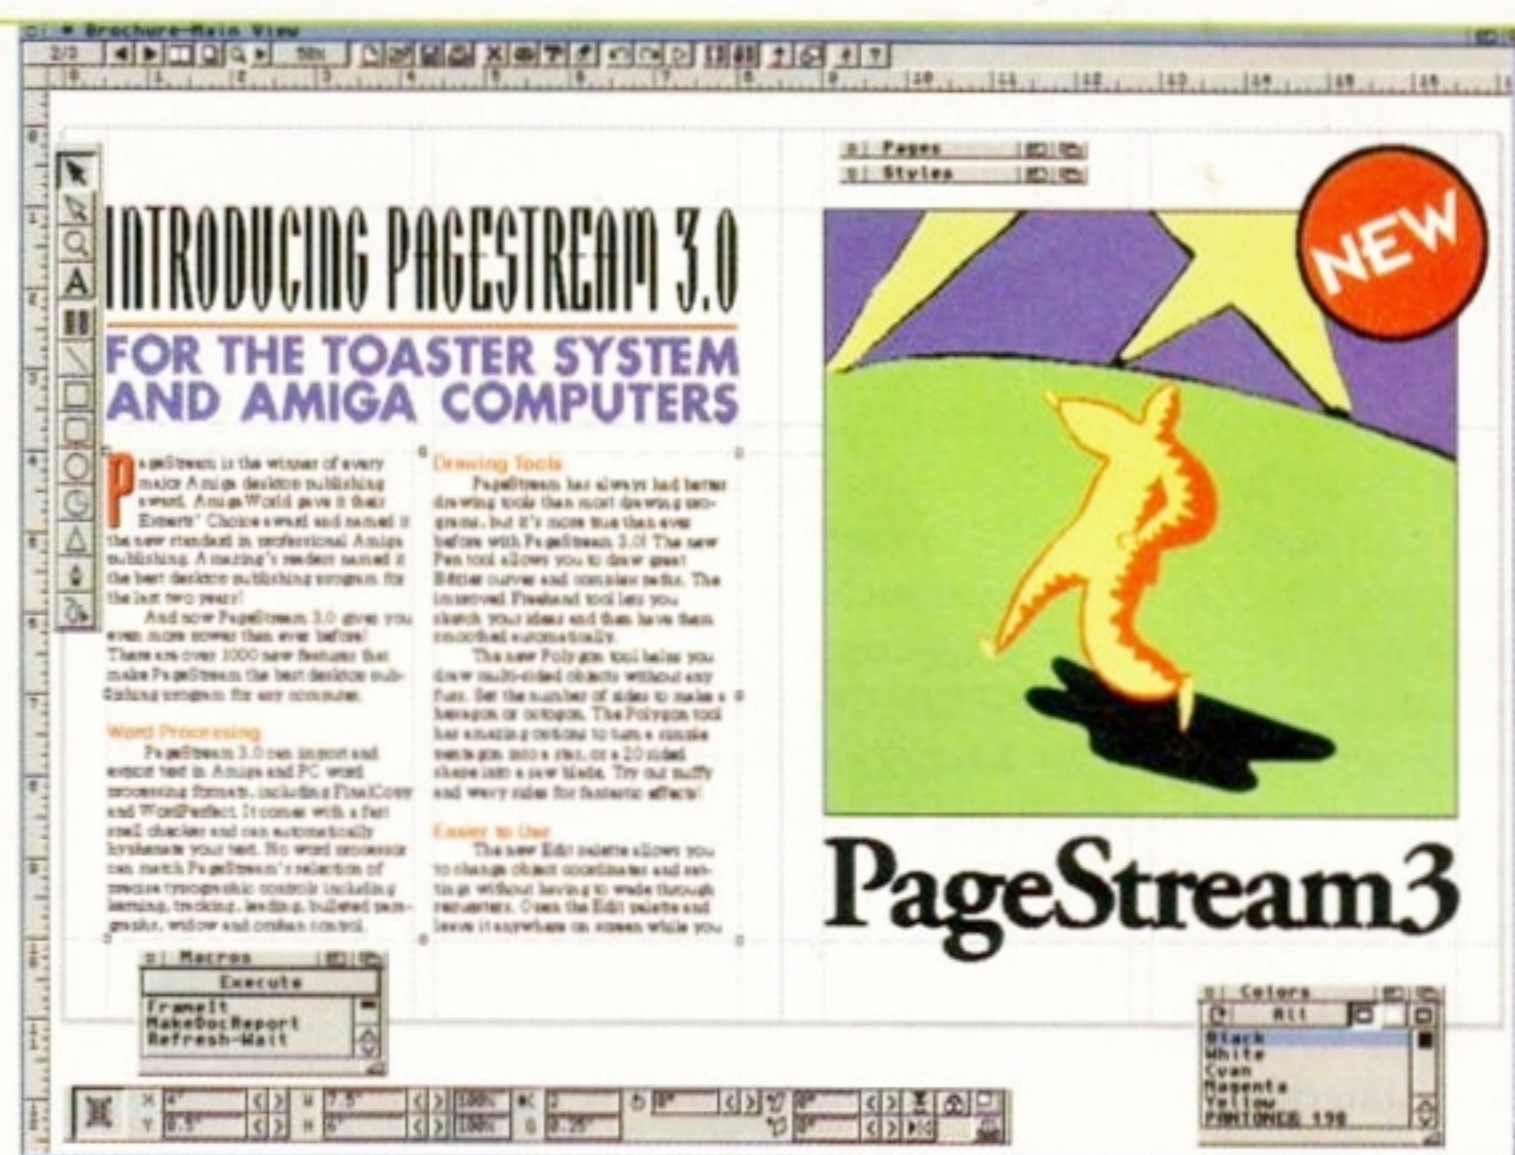

With the right software, you can put your ideas into print and join the DTP revolution.

These screen grabs from Soft-Logik show some preview screens from the latest version of *PageStream* – *PageStream 3* could be the best DTP package on any computer.

*PageStream 3* is due for release very soon. To find out whether it lives up to its high expectations, look out for the definitive *Amiga Format* review in the next issue.

you an element of control over the layout of a page, allowing you to import graphics, change typeface and choose printing methods, but if you want to get serious you need a dedicated DTP program.

*PageSetter 3*, *PageStream 2.22* and *ProPage 4* are all capable of producing output to any preferences printer, including inkjets, dot matrix and lasers, and all three can output pages to *PostScript* compatible printers.

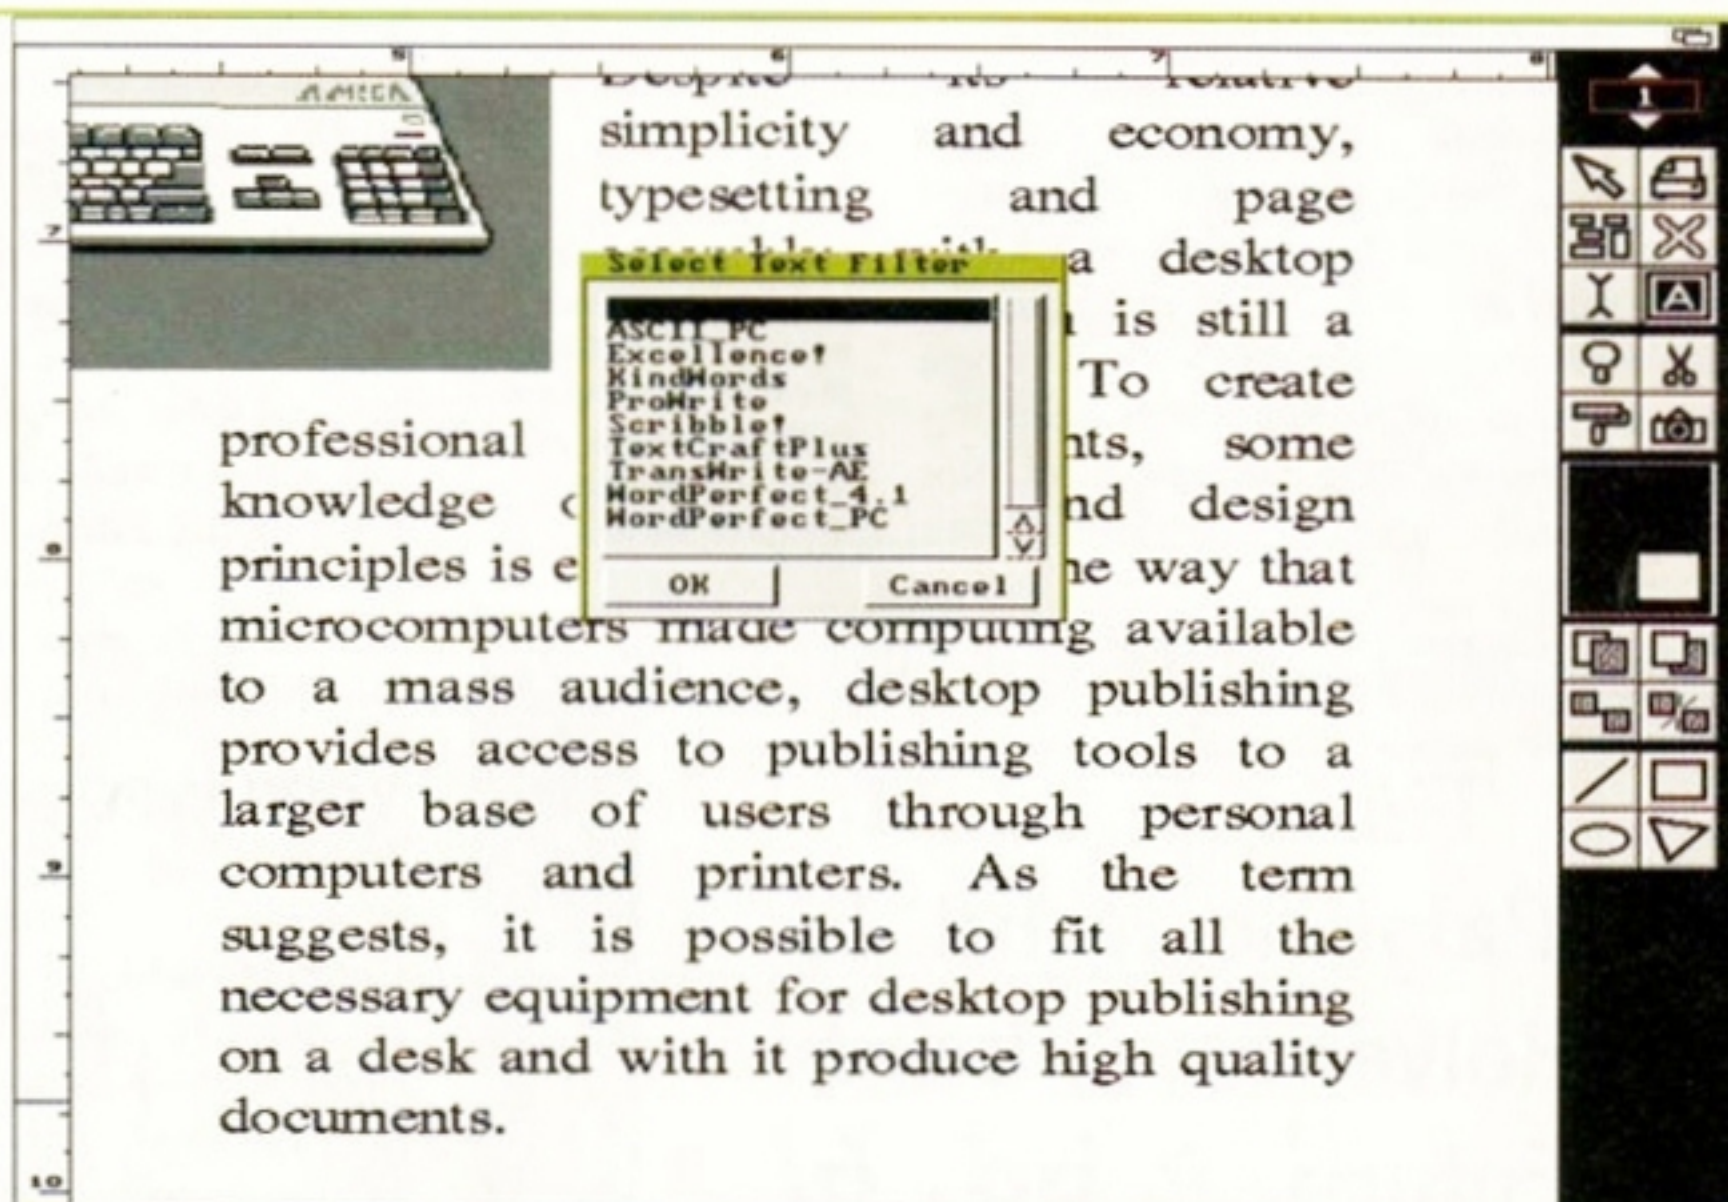

## DTP COOKBOOK

Where they differ is in the ease of use and features. *PageSetter 3* and *ProPage 4.1* have been re-written to utilise the AGA chipset in Workbench 3 machines and *PageStream 2.22* (the latest version at the time of going to press) has been patched to use up to 256 colours if specified from the CLI or the Workbench ToolTypes setting.

It is possible to produce documents of the same quality with all three programs, but for serious heavyweight work involving lots of text and graphics, *ProPage* and *PageStream* probably have the edge.

A point to note when choosing a DTP package however, is that Gold Disk, who produce *ProPage* and *PageSetter*, are not

Although lacking in graphics import filters, *PageSetter* accepts a variety of text formats.

developing for the Amiga any more. They still provide technical support to registered owners of their packages but have no intention to release any more Amiga programs. Soft-Logik, on the other hand, are committed to developing for the Amiga and are working on *PageStream 3*:

look out for an *AF* review very soon.

The best way to generate text for use in a DTP program is to use one of the many Amiga word processor or text editor programs – it's far easier and faster to create text on a dedicated WP rather than

**Continued overleaf →**

## STRUCTURED VS BITMAP GRAPHICS

Like fonts, graphics can come in either structured or bitmap formats. Essentially, structured drawings are better than bitmapped graphics for simple drawings and because they output to the highest resolution of your printer, their quality can be very high.

Bitmaps on the other hand are limited to resolution constraints, mainly due to memory restrictions. However, colouring and shading on bitmaps, especially 24-bit full colour graphics, is better than in structured graphics unless the structured graphic is very complex.

Pictures and photographs are in bitmap format when scanned in to your Amiga. Structured graphics such as those produced on programs such as *Professional Draw* or *Art Expression* can be very complex, but are generally best suited for logos and the like. Most publications like *Amiga Format* use a combination

The advantage of structured drawings such as this *Adobe Illustrator* picture of a tiger is the way they can be resized without any loss in clarity.

of both types of graphics. Be warned however, that using lots of images on a page increases the output time and can take up loads of memory

*Art Expression* is a structured drawing program that allows you to play around with text and shapes mathematically, so your work is easily scalable.

space. If you intend to use lots of graphics, you would be well advised to invest in some extra memory for your machine.

typing directly on to the page on the DTP package. *ProPage 4.1* and *PageSetter 3* both come with article editors designed to make life easier for you by using a hot-link system where text entered into the article editor is automatically updated on your page should you change any of it.

It is very important for a DTP package to be able to import text from a variety of word processors, some native to the Amiga and some from other platforms such as the Macintosh or the PC. *PageStream* can import text from *IFF FTEXT*, *ProWrite*, *Excellence!*, *WordPerfect*, *1st Word*, *Final Copy* and *Rediger* as well as ASCII text in Mac, PC or Amiga format. *PageSetter* and *ProPage* can import these and the *TextCraft* format.

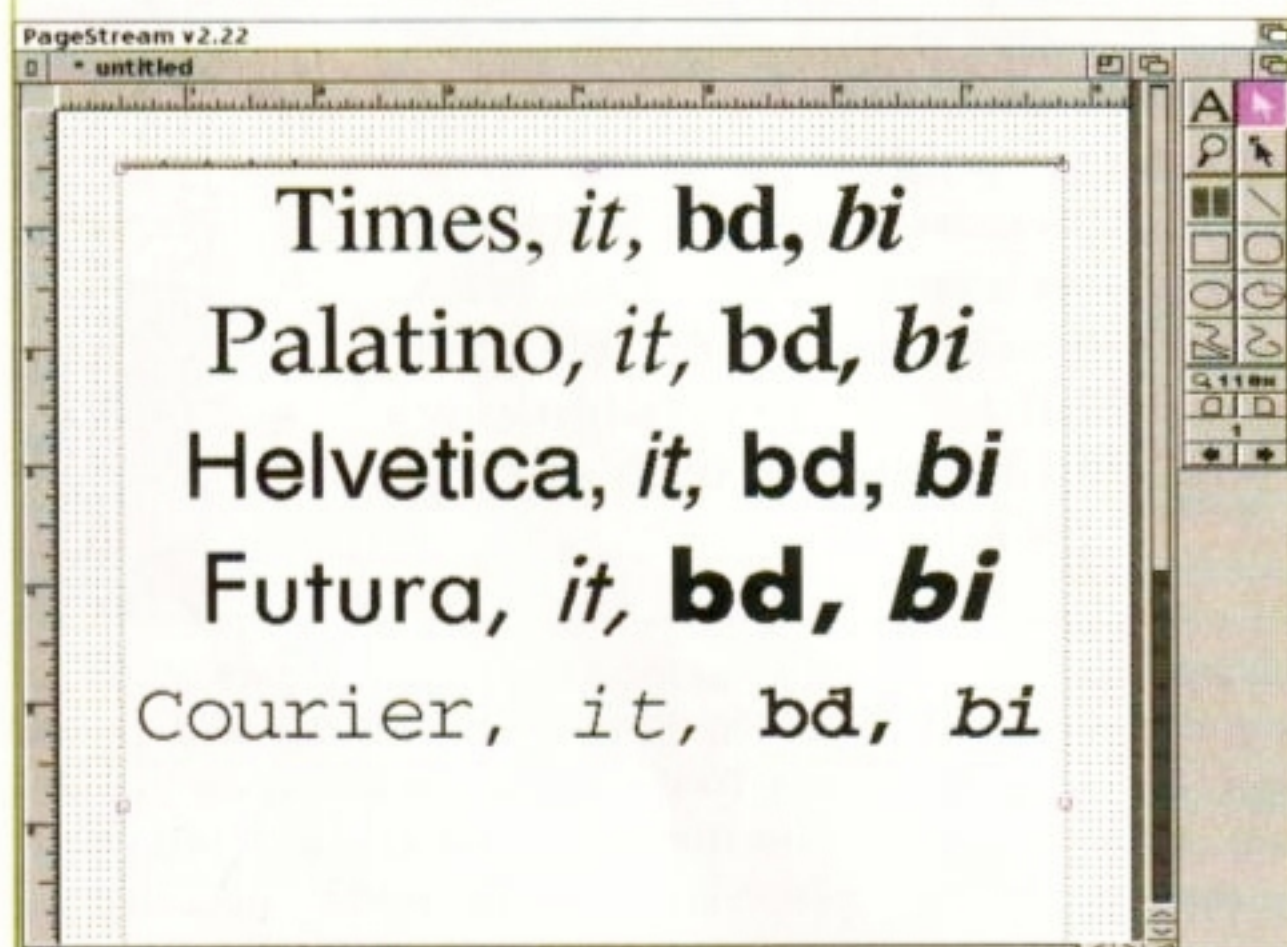

## FONTS OF KNOWLEDGE

These filters enable all your formatting codes to be utilised by the DTP package, but if your word processor is not supported, you can save your text as ASCII and import it into the DTP program.

Once you've got the text on the page, it's time to think about what kind of font you want to display it in. All DTP packages use outline fonts for output, which are fonts that are defined mathematically. Each character is individually defined by a series of lines and curves which builds up the letterform. The advantage of this system over the original Amiga bitmap font

Outline fonts are far more suitable for DTP work because they can be scaled to virtually any size with no loss of quality.

Fonts like these can be picked up from several Public Domain libraries or off good Bulletin Boards, such as 01 For Amiga (071-377 1358).

## THE FULL DEAL

If money was no object the ideal Amiga DTP setup would probably consist of an Amiga 4000/040 with 16Mb of RAM, an Epson GT6000 24-bit flatbed scanner, a high-resolution colour PostScript laser printer, with one of the three leading Amiga DTP packages - *PageStream* or *ProPage* are better if you intend to use a lot of big graphics in your work - a big hard drive with at least 200Mb capacity, a fast HST modem for sending files to a bureau, a dual-sync or multi-sync monitor for a crystal clear steady display and an extremely large desk to put it all on.

Unfortunately for most of us, money is a major object. But on a small budget you can easily set up a good system capable of producing excellent results - especially now you've got the *PageSetter 2* Coverdisk.

With DTP, having plenty of memory makes things easier, especially if you start using lots of fonts and graphics. Generally you can get by without a scanner, but if you felt you really needed one they can be picked up for around £100-£150.

Check out *AF61* for a scanner round-up. A good starting level would be an Amiga with 2Mb of RAM, a 40Mb hard drive (beware though, because fonts and graphics can eat up hard drive space) and a good 24-pin or inkjet printer.

system is that outline fonts are printed out to the highest resolution of your printer, giving a smooth, jaggy-free result.

All three programs come with a selection of outline fonts, and *ProPage* and *PageSetter* also have some bitmap fonts. Bitmap fonts, due to their low resolution, are only suitable for small sizes, or low resolution printers. Generally you are best advised to stick with outline fonts, and indeed with *PageStream*, you cannot use anything but outline fonts.

## YOUR TYPE OF FACE

If you are only using non-PostScript printers, your best bet is to get CompuGraphic fonts which give exceptional quality. If you think you might need PostScript output, your best bet is to get PostScript Type 1 fonts. Read the section on PostScript for further information on font formats.

The typeface you choose conveys different images to the reader. It should be clear and readable, without being boring. Take a look at these examples: Times, Palatino, Helvetica, Futura, Courier.

**Times** is a solid and very readable serif font which is effective for long pieces of text.

**Palatino** is similar to Times in that it is good for body text, but has slightly more characteristic letterforms making it a bit more stylish.

**Helvetica** is a good sans-serif font that complements Times very well, especially for sub-headings. All three DTP packages mentioned come with versions of Times and Helvetica (Triumvirate).

**Futura** is a modern-looking display font, good for large headings, but not really suitable for long pieces of text.

**Courier** is like the fonts built into most printers. It is not an attractive font, not good for long text due to its monotony. But it's useful for highlighting text that indicates computer output.

Generally, it is a better idea to stick to a limited number of fonts in your work and instead apply styles to them such as italic, bold and bold/italic. This way you maintain a consistent look but still have

**Continued on page 30**

Both *ProPage* and *PageStream* allow you to import a wide variety of bitmap and structured graphics into your documents, such as this rather mean character.

## PRODUCING THE AMIGA FORMAT COVER ON THE AMIGA

1. First the logo is typed into a text box on the page. It is set in Helvetica BlackOblique. In order to get the shadow effect, the box is duplicated and slightly offset to the top and left and the text coloured magenta.

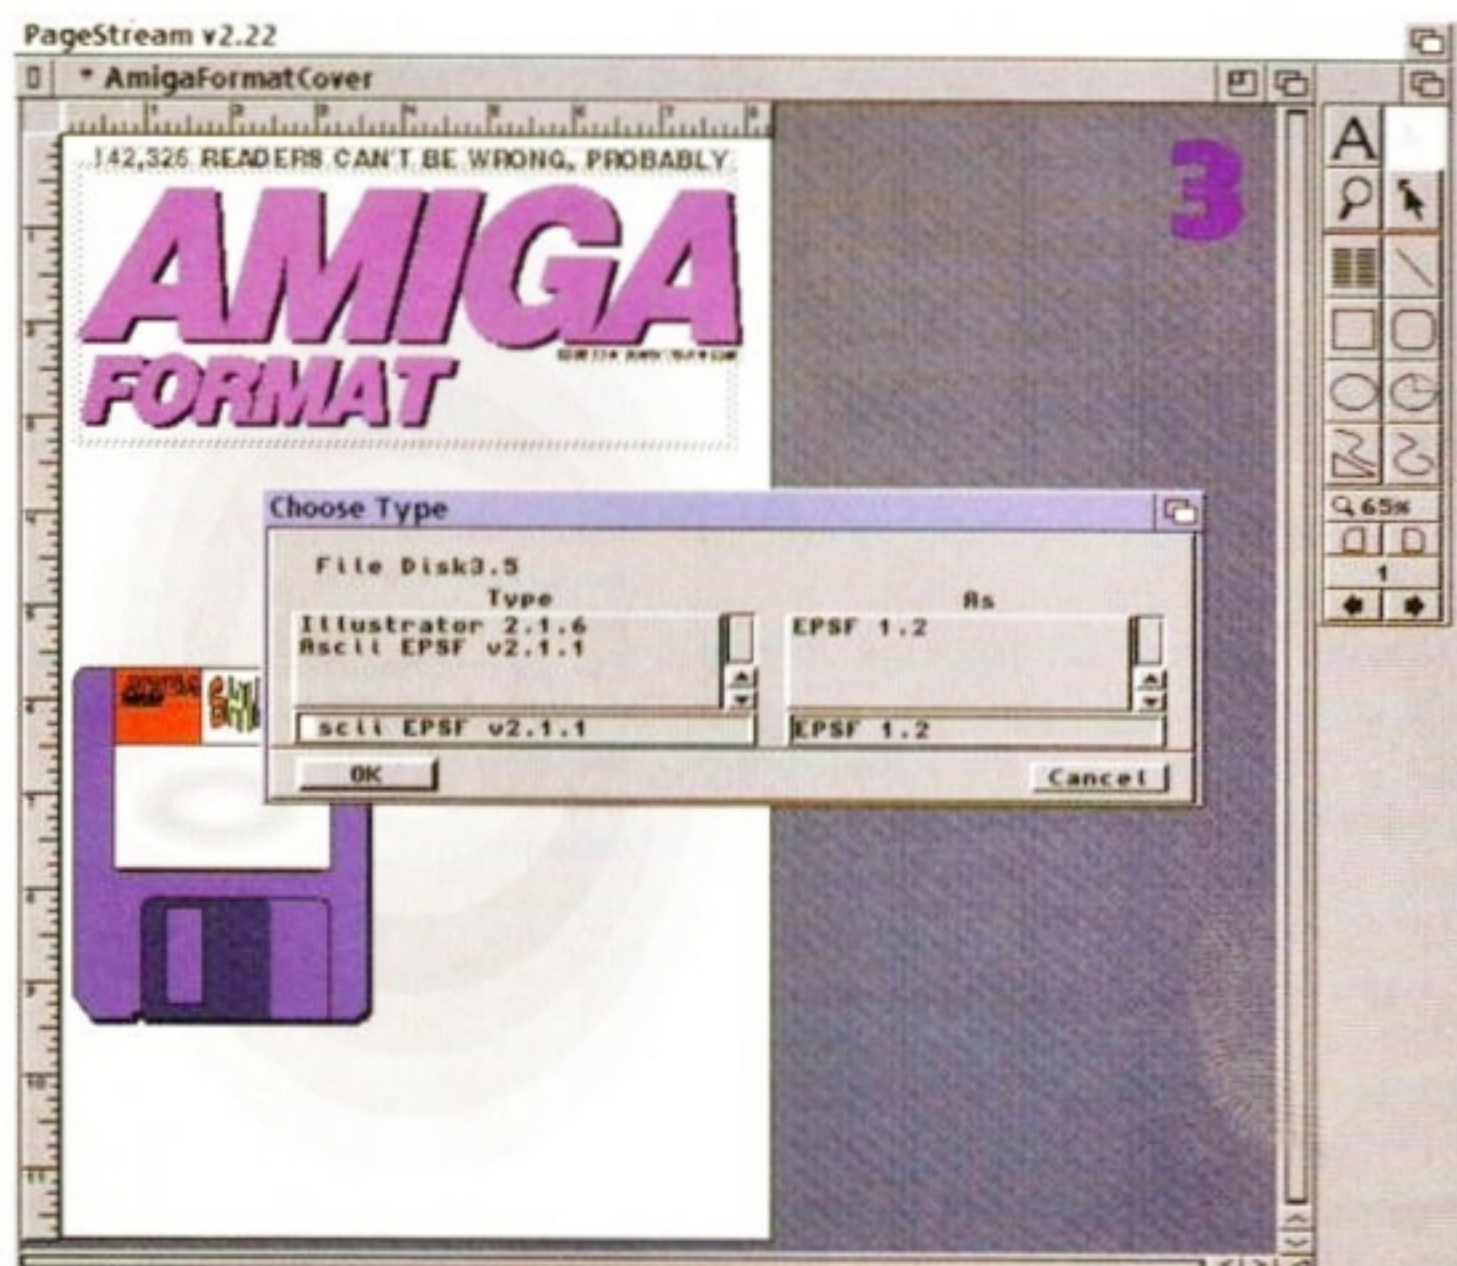

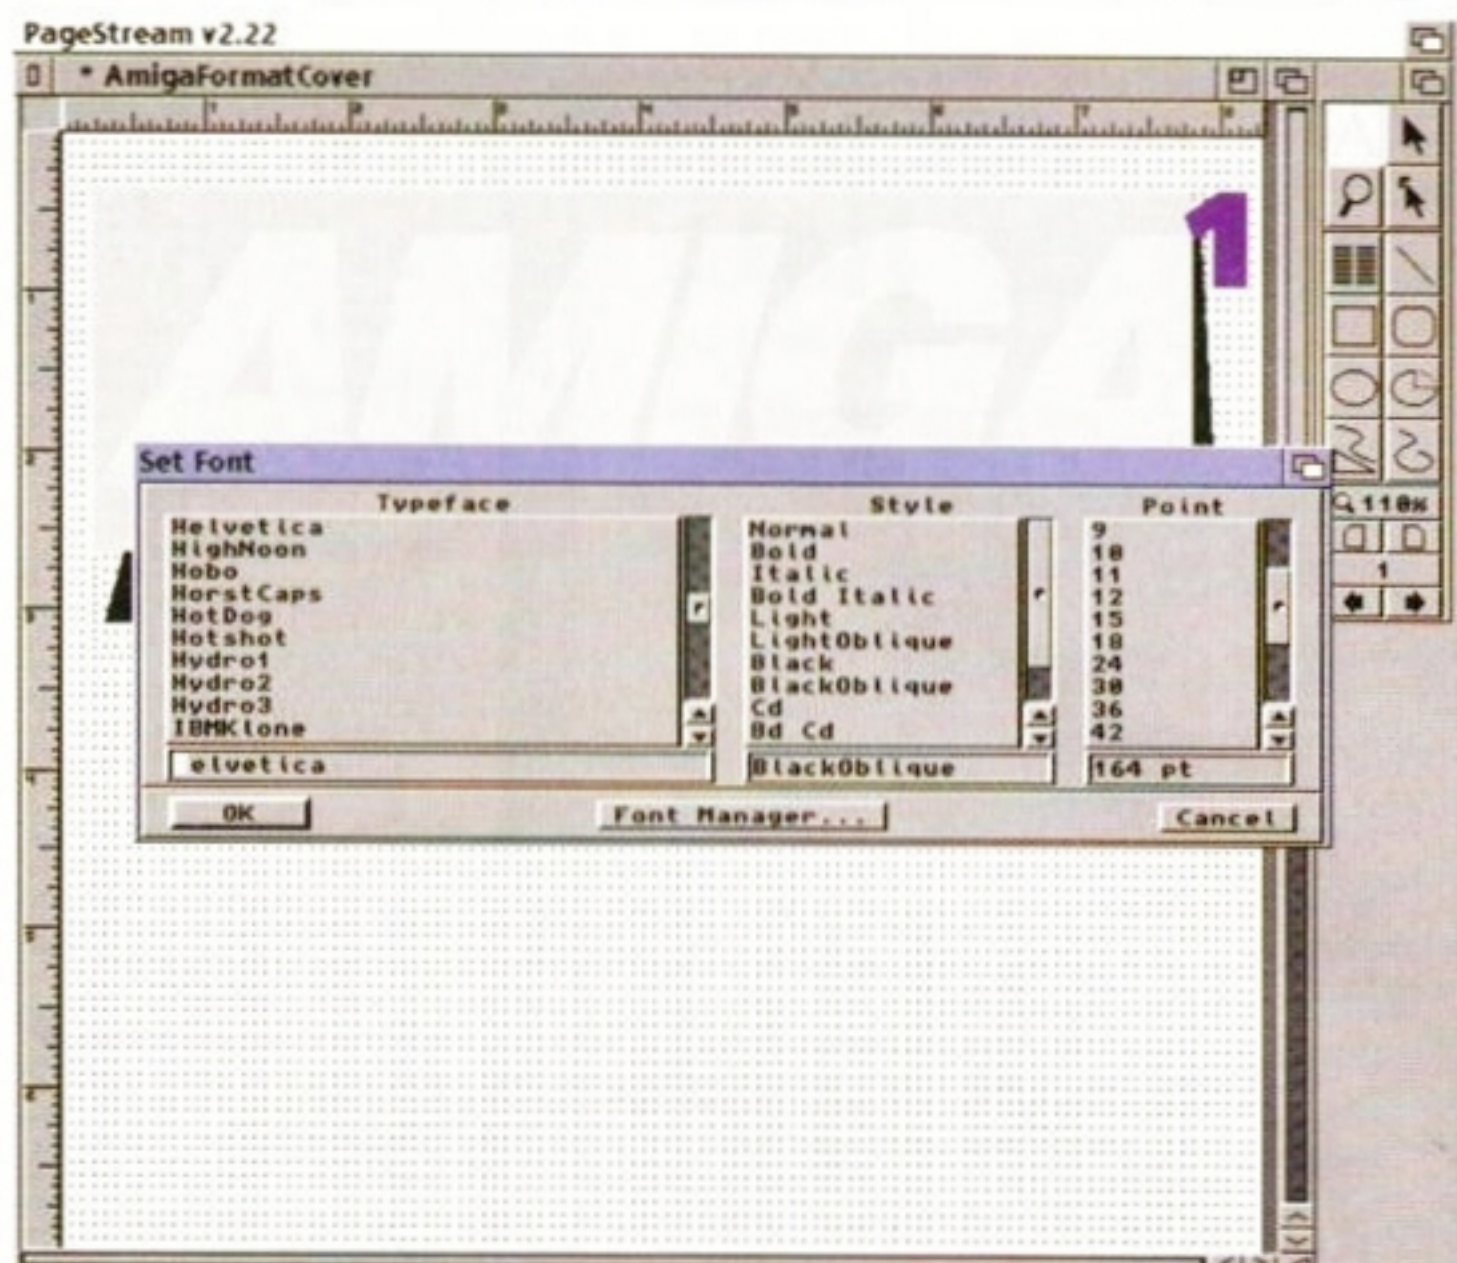

After entering the blurb at the top and the issue number, it is time for a simple background, for this example, that is positioned behind all the other elements of the page.

2. The ellipses were created in *Art Expression* and exported as an IFF-DR2D object. There are actually around 30 different ellipses here, but the screen only represents a handful for speed and due to palette restrictions.

3. OK, We need some Coverdisks. I found this disk in an Illustrator clip-art collection. I used *PageStream*'s built-in drawing tools to colour it in and to add a label to it.

4. I've used the ellipses again for part of the label, and then I created the word SHINDIG! in *Art Expression*. It was originally used for a flyer for a nightclub. The feet are some more clip-art, this time supplied with the *Art Expression* program. Structured drawing programs such as *Art Expression* are great for creating small logos and pictures like these feet and the tiger on the previous page.

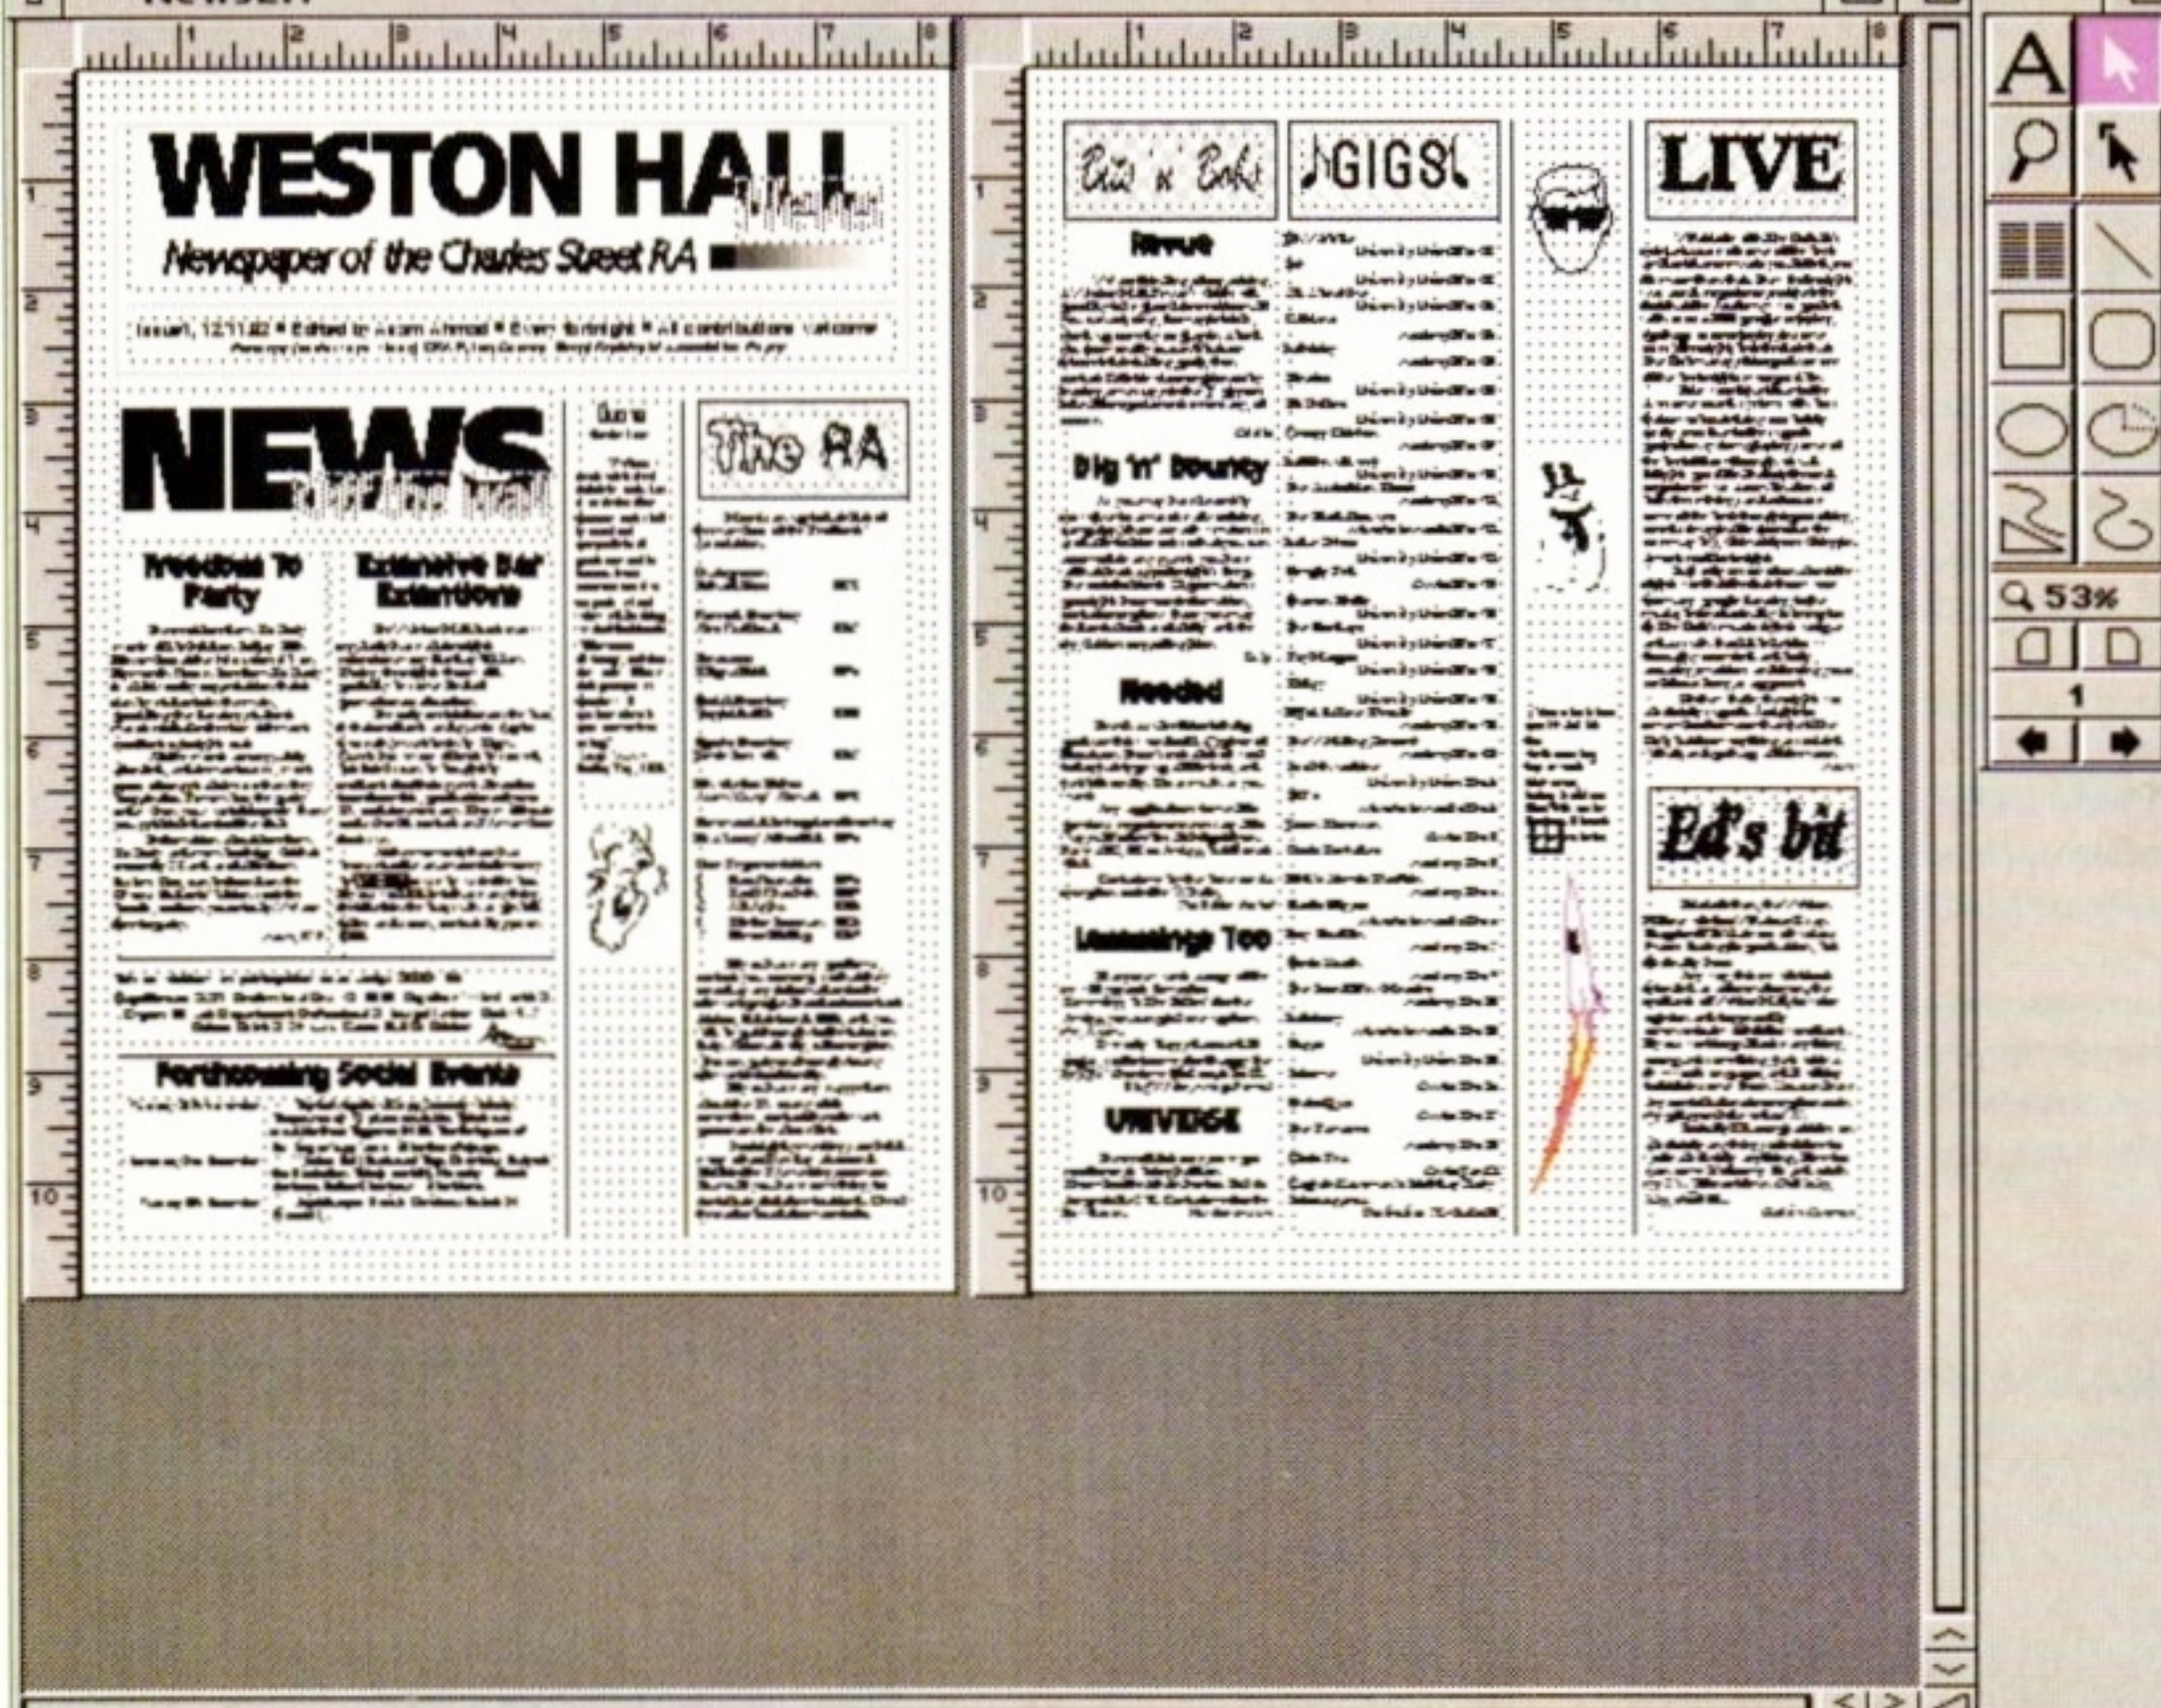

5. Finally the rest of the text is added. I have used several different sizes and weights of the Helvetica (Triumvirate) family for all the text. The last addition is the Future Publishing logo which was created on an Apple Macintosh and imported as an EPS file. Voila! We have our own version of an *Amiga Format* cover.

PageStream v2.22

\* News2.1

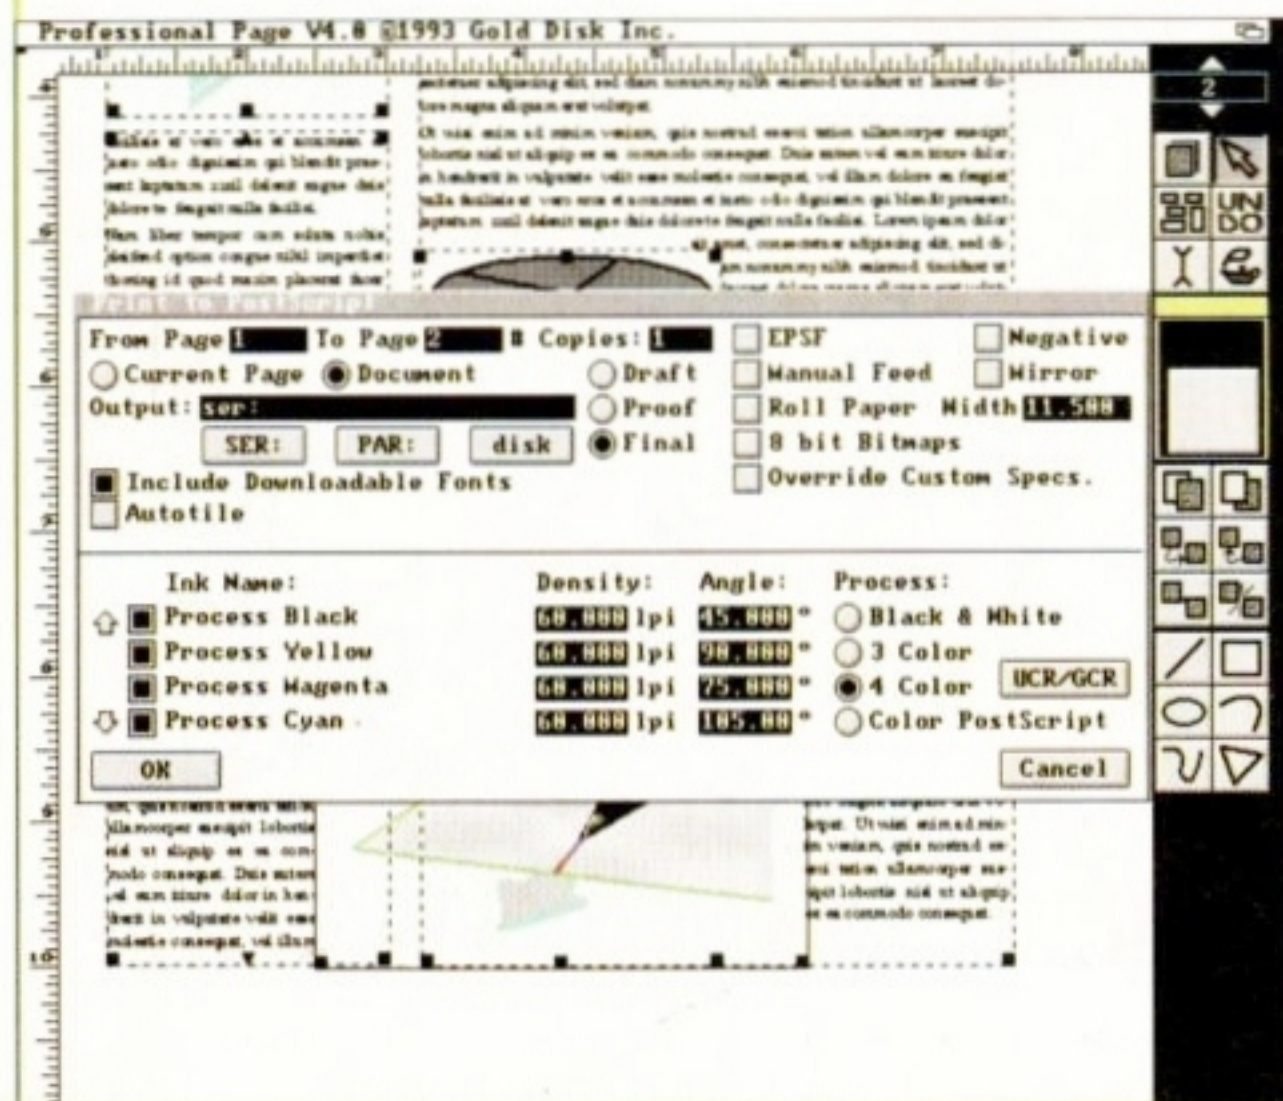

the flexibility to highlight words by applying a different style to them.

Graphics come in an even bigger variety of formats than text. The standard Amiga graphics format is IFF ILBM, but it is not enough for a DTP package to only support this format because there is a wide variety of clip-art from other sources you can use in your documents.

Because it is an entry level package, *PageSetter* only supports IFF bitmap files and *Professional Draw* structured clips. *ProPage* supports these as well as the alien formats TIFF, IFF, GIF, PCX, BMP bitmap formats, plus *Adobe Illustrator*, *Aldus Freehand*, *Aegis Draw* (IFF DR2D), *Art Expression* EPS files and standard EPSF structured graphics files. *PageStream* supports all the above as well as the *MacPaint*, *GEM Metafile*, *Degas* and *Neochrome* bitmap formats.

This simple two-page newsletter shows how your layout can be eye-catching and yet remain neat and uncluttered, even with lots of information.

This is the PostScript output requester from *ProPage*. All the PostScript output specifications are controlled from here.

Getting graphics on to your Amiga can be done by using a hand-held scanner for small images or a flatbed scanner for sizes up to A4 and larger. A flatbed scanner is probably out of the price range of most people, but there is a solution. Most DTP bureaus have scanners and for a small fee they can scan pictures on to disk for you.

It is unlikely that they will have Amigas, so the scans they provide will be output on to an MS-DOS formatted disk which you need to read through *CrossDOS*. The best format in which to save your scan is TIFF, because this provides the best compression for most images, unless, of course, you are using *PageSetter* which requires IFFs. Be warned that bitmaps can be huge, especially if they are done in full colour. Remember as well that there is absolutely no point scanning in a picture at 1200dpi if it is only going to be printed

out on a laser at 300dpi. All you will achieve is wasting lots of memory.

Small logos that use just a few colours can also be traced with packages such as *Professional Draw*. This converts them into structured drawings meaning they can be resized without any loss of quality. The other advantage is that structured graphics normally take up less memory space. This process works best with simple graphics.

Desktop publishing programs are powerful tools that can transform simple text into beautifully-presented prose. They give you the ability to create your work using as many fonts as you have in as many different point sizes as there are stars.

What this means is that you can have fine control over the layout of your text. It can be positioned anywhere in any colour or shade or even with patterns, shadows and other effects. The only problem with having the ability to fine tune your work to your liking is that you also have the ability to create visual monstrosities.

## THE ART OF DESIGN

It is far too easy to fall into the trap of using features just because they are there. Imagine a magazine that used 10 different font families on one page in lots of different colours and was littered with typographic effects such as drop caps and bulleted paragraphs. It might be impressive and show off what the desktop publishing package can do, but as far as the poor reader is concerned it would be a psychedelic nightmare.

When producing your documents it makes good sense to adopt a specific style and then stick to it. This gives your work a more consistent nature which ultimately results in a more professional look. When using fonts in your document it is generally better to stick to one serif family for body copy and perhaps a sans-serif font for headlines and sub-headings.

Serif fonts are generally more readable than sans-serif fonts due to their little spurs providing the eye with hook-points which help with character recognition. A good way of saving time when setting different font attributes is to use style tags which enable you to quickly define different elements in the text. This means that if you are unhappy about the way your copy

## WHICH PRINTER DO I NEED?

There are an abundance of printers, all giving you differing quality and speed. Nine-pin dot matrix printers give a maximum resolution of 240dpi x 216dpi, so the output can sometimes be a little coarse, but nine-pin printers are cheap and can be picked up for around £150.

They are great for low volume work where you don't need exceptional quality. A good nine-pin printer is the Citizen Swift 90 which has a top printing speed of 240cps. You can get a good colour version for around another £20.

The next step up from nine-pin printers is a 24-pin dot matrix. These give a top resolution of 360dpi x 180dpi (although some make two passes for each line to take up the resolution to

360dpi x 360dpi). The output from 24-pins can be very good, especially on suitable paper. Most 24-pin printers cost around £175-£200, and a little more for colour.

After dot matrix printers we come to inkjets such as the HP Deskjet and the Canon Bubblejet series. These give high-quality results at resolutions of 300dpi for the Deskjet and 360dpi for the Bubblejet. There are also colour inkjets such as the HP Deskjet 560C (about £475), which has exceptional colour output.

Laser printers have come down remarkably in price however, and can be picked up from around £500. Most laser printers have a top resolution of 300dpi, but due to the way they print, the quality is generally that bit better than inkjets.

looks, you can change everything set with the same tag simply by adjusting the tag settings, rather than having to select all of the items individually.

## DTP TIPS

Laying out pages on a DTP packages is a bit like cooking. All your ingredients must be balanced out in the correct proportions in order to make a page look good. Apart from the body copy and graphics, other elements on your page (including white-space) can be used to good effect with a little forethought about page design. Sometimes it can be useful to have a rough sketch on paper giving you an indication of how you want a page to look before you start designing on screen. Headlines should be large enough to attract the readers' attention and give them some kind of indication about the subject of the article. All pictures used on the page should also have captions explaining the content of the picture. Drop caps should only be used on the first letter of the article, if at all. Always include page numbers for long documents and make sure that columns that flow over pages start in logical places.

It can be incredibly annoying when columns are broken up into segments and it is unclear where the text continues, especially if there are separate articles on the same page. Sometimes it is a good idea to take breaks from your work and come back to it, even after you think you have finished, because it is all too easy to leave small mistakes lying around when you have been working on the same document for a long time. You might even think that the work you did yesterday looks awful today and redesign it totally!

Another good tip is to analyse how other publications apart from your own are put together and to try to understand why elements are placed where they are and what purpose they serve. Practice makes perfect.

As you publish more and more, your style will mature and if you were given the same task as you had to do a while back you'd most likely produce something radically different to the last time!

## POSTSCRIPT

*PostScript* is a page description language developed by Adobe Systems Incorporated. Normal preferences output involves a large bitmap image being sent to your printer which forms the printed page. *PostScript* is a different beast. The *PostScript* output from DTP packages is actually a *PostScript* program written in simple ASCII text. The reason the program is written in ASCII is so that *PostScript* programs can easily be interchanged across computer platforms. Instead of a bitmap being sent to the printer, the *PostScript* program contains instructions on how to make up the page using commands such as Times-Roman Findfont which would use the Times font for your text.

So what's the advantage of *PostScript*? Perhaps the best thing about it is that it is resolution-independent, which means that the same *PostScript* program can be sent to a 300dpi laser or to a 2540dpi Linotronic imagesetter and the output, apart from the finer resolution of the imagesetter of course, will be the same. So, if you have a *PostScript* laser printer you can output work at home and if you ever need to output at a higher resolution, you can pop along to

**Continued overleaf →**

## POSTSCRIPT ON THE AMIGA

The excellent *Post Public Domain* program enables you to see a preview of a *PostScript* file.

Don't worry if you haven't got a *PostScript* printer, because you don't actually need one. You can get *PostScript* output on any kind of printer by using an excellent Public Domain package called *Post*.

The latest version of *Post* is v1.86enh (a graphically enhanced version of the v1.7 original archive written by Adrian Aylward) and it's available from any good Public Domain library or Bulletin Board.

*Post* can take any kind of *PostScript* output and render it for whatever printer you have. This means that if you intend to do work that will eventually be output on film, you can first proof the pages on your Amiga to make sure there are no costly mistakes in your output. It also means you can use EPS (Encapsulated *PostScript*) graphics in your documents and print them out where in normal circumstances you would need a *PostScript* printer to do so.

If you have limited knowledge of *PostScript* this tool is a godsend to help you set up a full *PostScript* system the way you want. If you do have some knowledge of the *PostScript* system, *Post* can provide you with an interactive *PostScript* environment to test out effects and help you make your own *PostScript* programs.

*Post* runs on just about any Amiga, provided you have at least 1Mb of memory. In order to get the maximum benefit from the program and to render pages to a dot matrix printer at a decent rate, 2Mb and a hard drive is recommended.

## FULL-COLOUR PRINTING

If you want to print your documents in colour you need to choose the four colour separation option on your DTP program for full-colour CMYK printing. This option outputs the page four times, one for each of the primary colours of DTP: Cyan, Magenta, Yellow, and the Black, which is represented by the letter K so that it doesn't get confused with B for Blue. The K actually stands for Key colour.

Black is usually separated as well as the colour produced from the CMY to give sharper gray scales. Colour separations involve output to *PostScript* devices so you should ensure that the files you produce contain all the correct fonts that you need.

Once you have got the *PostScript* file on disk you can take it to a bureau to output it to film at 1270dpi or 2540dpi, depending on complexity of the document and the detail required. This film should then be taken to an offset printer, who makes metal plates from the film which are put on to the presses. The page goes through four times, once for each colour to build up the final page.

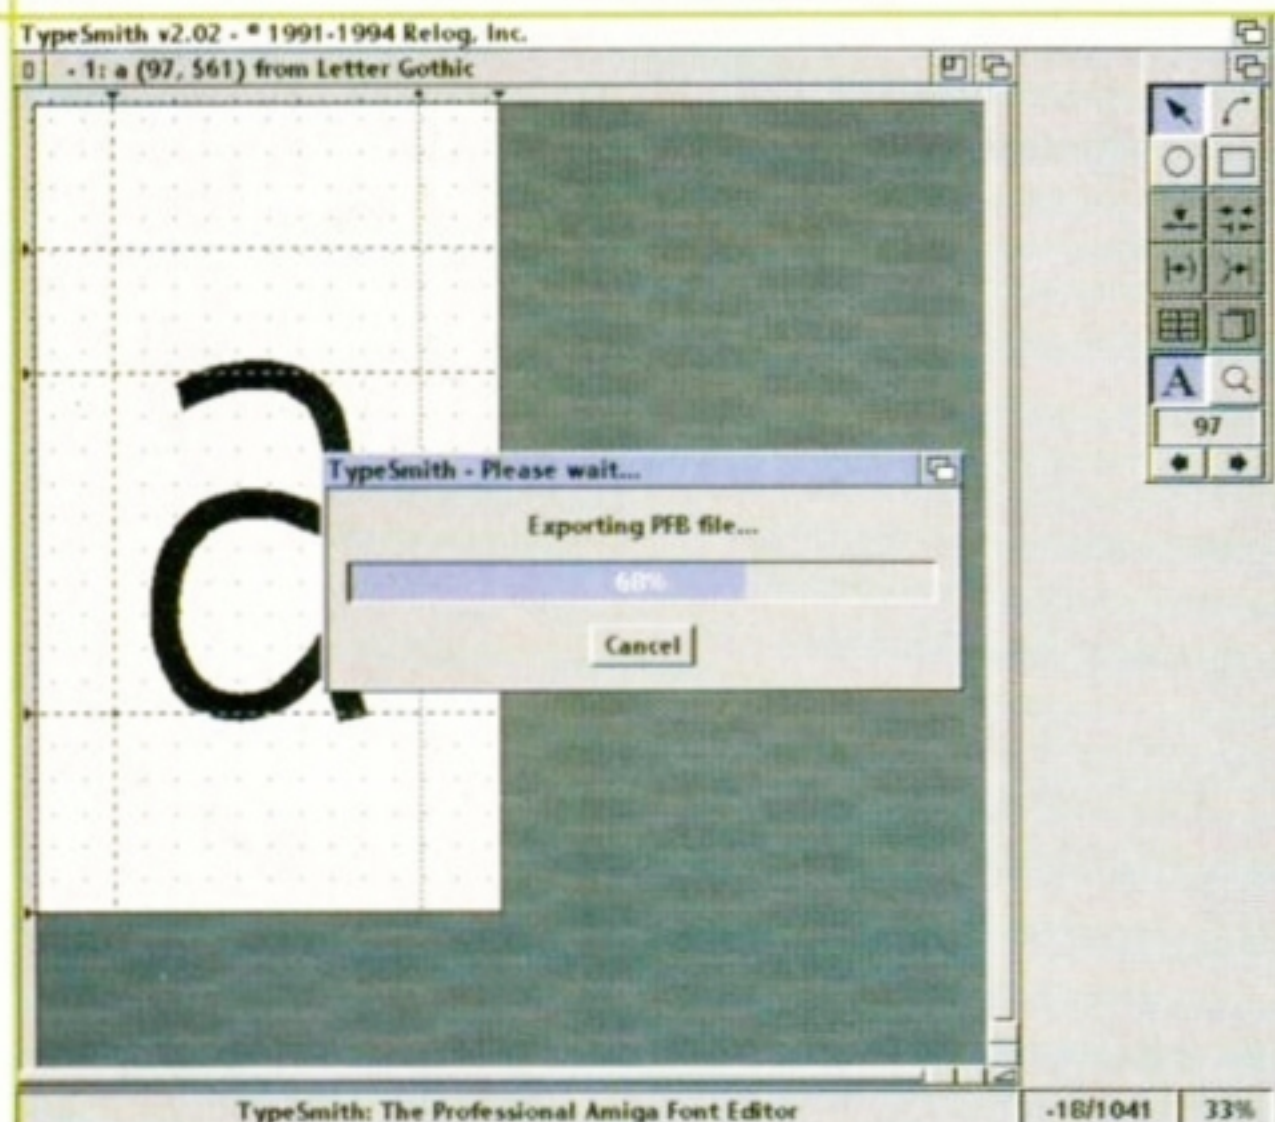

When outputting for full colour separations you should select crop and registration marks to be printed as well. These special marks help the printers align all the plates correctly and indicate to the printer where the pages should be cut.

When you see the output from your Amiga in full colour at magazine quality it can be quite impressively sharp and clear. Some of the work I have output myself can easily rival anything produced on a Macintosh.

This picture is Cyan in the top left, C and M top right, CMY, bottom left and full-colour CMYK on the bottom right.

your nearest DTP bureau with the file on a 720K MS-DOS disk (using a utility such as *CrossDos*) to get the file printed at high resolution. Where the *PostScript* files use lots of fonts and graphics and are too big to fit on to a 720K disk (or 1.44Mb for owners of high-density drives), most good DTP bureaus allow you to transfer the *PostScript* files using a modem.

### DO THE WRITE THING

The main problem Amiga users might have with the *PostScript* system is with fonts. The Amiga uses Agfa CompuGraphic Intellifonts as its native outline font system, but it's incompatible with *PostScript*. In order to use Intellifonts with *PostScript* devices, they must be converted into *PostScript* format before they can be downloaded to the printer. Most DTP packages get around this to some extent by using equivalence tables for fonts that are built into the *PostScript* printer.

For example CStimes is automatically replaced by the *PostScript* version when the document is printed. Other fonts however, such as those not built in to the printer, require separate downloadable font files for *PostScript* or they are replaced by a default font such as Courier.

**TypeSmith** is an invaluable aid for DTPers, especially for being able to convert font formats as well as creating and editing fonts.

*PageStream* eliminates the need to have separate CompuGraphic and *PostScript* versions of fonts by allowing you to output *PostScript* fonts to any kind of printer. If you buy *PostScript* Type 1 fonts, it is simple to output them, but the Gold Disk system is a little more complex. In order to use *PostScript* fonts, they must be converted into Intellifont format using the supplied *FontManager* program so that *ProPage* and *PageSetter* can display them on screen.

### HOT OFF THE PRESS

If you buy Intellifonts, in order to use them with *PostScript* devices, they must be converted using the supplied *CreateFont* utility so that there is a downloadable *PostScript* version for such devices. *PageStream* doesn't have such a utility, so in order to use Intellifonts on *PostScript* devices a program such as the superb *TypeSmith* font creator must be used to export fonts in *PostScript* format which *PageStream* can then use.

Whichever desktop publishing package you use, *TypeSmith* is an invaluable utility for manipulating your fonts.

*PostScript* is the industry standard page description language and virtually all publications that are set on an imagesetter use a desktop publishing package of some description outputting *PostScript* files.

The Amiga is capable of producing such *PostScript* output and therefore the quality of Amiga-produced documents can easily be as good as anything generated on a Macintosh or a PC Compatible. *PostScript* is to dot matrix as outline fonts are to bitmap fonts.

### SHOW US YOUR PAGES

If you create something special with your *PageSetter 2* Coverdisk, tell us about it. We'll publish some of the best

examples, and there may even be a smattering of prizes. Oh, and if it's something really special we may just invite you in to lay out a page or two of *Amiga Format*.

Send your disks to:

Design Of The Times, *Amiga Format*, 30 Monmouth Street, Bath BA1 2BW.

## JARGON BUSTING

**24-BIT:** A 'true' colour bitmap type using up to 16,777,216 colours.

**CMYK:** A printing process where all colours are made up from varying combinations of Cyan, Magenta, Yellow and Black.

**CAMERA-READY:** A term used when a page is ready for the film stage.

**EPS/EPST:** Encapsulated *PostScript* files that contain drawings defined in the *PostScript* language.

**FONT:** A collection of letters and numerals of one type style.

**GIF:** Graphics Interchange Format. A bitmap format which was developed by CompuServe.

**IFF DR2D:** Interchange File Format Drawing 2-Dimensional. A structured drawing format.

**IFF ILBM:** Interchange File Format InterLeaved BitMap.

**LEADING:** The vertical space between lines of text.

**PCX:** A PC bitmap format.

**PICA:** A DTP measuring system (approximately 1/6th of an inch).

**POINT:** 1/12th of a pica or 1/72th of an inch approximately. Font size is generally referred to in points.

**POSTSCRIPT:** The industry-standard page description language.

**RESOLUTION:** The dot-density of an output device.

**SANS-SERIF:** A font without serifs.

**SERIF:** A font with little spurs (serifs) on the stems of characters.

**STYLE TAG:** A defined set of formatting commands that indicate how your text should appear.

**TIFF:** Tagged Image File Format. A bitmap graphics format used extensively in the DTP world.

**TRACKING:** The horizontal space between individual characters.

**TYPOGRAPHY:** The design of the text in printed matter.

Future Music

# Your favourite magazines come to life...

## The World of Amiga

Welcome to The World of Amiga – a whole show in itself, this is the place where you'll be able to see everything that's new and exciting for the Amiga, still Britain's liveliest home computer. Developments in CD-ROM, FMV, graphics, games and more will be there for you to see and try, and you can buy the biggest Amiga bargains too!

## Amiga Theatre

The Amiga Theatre will be the focus for all things Amiga: run by Amiga Format editor Steve Jarratt, with contributions from the eds of Amiga Power and Amiga Shopper. It will be the place where you can meet and quiz the experts such as magazine writers, software developers, technical gurus, and the people who are deciding the future of the Amiga. You'll be able to learn, take part, ask questions - get involved!

## The Future Music Feature

Come to The Future Music Feature – discover the amazing world of modern music, and find out how you can make music for yourself without having to spend a fortune or take years learning to play. Music is one of the most exciting areas of computer use, but so few people get involved: we can show you how! And if you're a musician already, we'll have all the most exciting new kit lined up for you to try, and lots of experts on hand to help you explore new ideas!

## Earls Court 2, London

## 26th-30th October

## CD-ROM Today Area

Don't miss the CD-ROM Today Area, where you'll be able to see everything that's new on compact disc – currently the most exciting area of leisure computing. See and try the latest games, edutainment and multimedia products on disc, perhaps buy a CD-ROM drive

or multimedia expansion for your computer from the many dealers at the Show and get a taste of the future with MPEG, FMV and more.

• Co-sponsored by OPUS.

## THEME PARK

### AMIGA FORMAT

busy and we've been to the wilds of Saffron Walden this month to check the progress of *World Of Soccer*, *Sensible Golf* and *Cannon Fodder 2* – flick to page 40 for the lowdown. Also in progress is Empire's impressive World War One flight sim *Dawn Patrol*.

It's here. At last. We take the first look at the Amiga version of Bullfrog's fairground attraction, *Theme Park*. To find out whether it's a rollercoaster or just a bumpy ride, turn to page 46. And still the footie games keep appearing – this time it's *On The Ball* and the eagerly-awaited *World Cup USA '94*. One of them is nice, the other a stinker – check out pages 64-66 to find which is which.

No fewer than three platform games dropped on the AF welcome mat this month and great fun they are too – one in particular is quite splendid. As for the rest, it's a fabulous mix of re-releases, CD32s, tips and cheats.

### A SENSIBLE ATTITUDE

Another month, another addition to the team. This time it's a (very) tall Scotsman who goes by the name of Steve McGill, poached from our friendly neighbours *Amiga Power*. Welcome (very) tall Scotsman. *Sensible Software* are keeping

### AMIGA FORMAT'S REVIEW POLICY

Every month we scour the world's software houses for the latest and greatest Amiga games. We try to ensure we keep you as up-to-date as possible, and we'll stop at nothing to bring you the best, definitive, no-nonsense reviews of the games that matter.

### WHAT OUR REVIEW SCORES MEAN

#### 90+%

The *crème de la crème* of Amiga games. Only the very best, most playable and original games are awarded an *Amiga Format* Gold – the most highly-prized rating there is.

#### 80-89%

These games are considered to be very good, but due to minor flaws are not the finest examples of their genre.

#### 70-79%

These are good games which are worth buying, especially if you have a special interest in a certain game type.

#### 60-69%

Average releases with limited gameplay and appeal. Games in this category tend to have significant flaws.

#### 50-59%

Below average games like this are unlikely to impress your mates or your wallet. Try to avoid if you can.

#### 40-49%

Overwhelmingly poor quality games with major flaws and appalling gameplay. They're an embarrassment.

#### Less than 40%

The lowest of the low. Don't even consider borrowing 'em.

# COMING AT

Work <sup>in</sup>  
progress

With only 100 shopping days left before Christmas (or something), there are already three potential stocking fillers coming your way from Sensible Software.

# Anything but SENSIBLE

**S**ensible Software are based in sleepy Saffron Walden, about 15 miles south of Cambridge, and according to former top *Amiga Power* journo Stuart Campbell, so little happens there that it's not even a one-horse town.

This is the guy who has landed a job most folk can but dream of – Stuart checks the quality of Sensible's game conversions on other formats, designs levels for *Cannon Fodder 2* and generally tries to keep the programmers grafting and out of the pub – no easy task – while keeping track of the various coverdisks that magazines constantly pester him for. Oh, and he plays a lot of pool and pinball in their gamesroom downstairs. But Saffron Walden is just a bit too quiet for our Stuart.

Not that the Sensible offices are so peaceful. *Sensible Golf* putter-togetherer Jools Jameson shares an office with *Cannon Fodder 2* programmer John Lilly (or JL, as he's more commonly known) and their stereo's speakers are louder than the none-horse town's only nightclub.

### Three of a kind

But suggesting that very little happens in Saffron Walden may be a tad premature. It's more than likely that before the year is out three of the best Amiga games ever will be coming out of the almost-comatose Essex hollow.

Yes, prepare for another invasion of the little people. Sensible Software's tiny sprites are the most loved in the Amiga world, and come November they're going to be appearing in *Sensible World Of Soccer*, *Cannon Fodder 2* and *Sensible Golf*. And don't let it be said that the guys at Sensible want much for Christmas. "One, two and three in the charts will do us," offers supremo Jon Hare. Any particular order? "Number one will hopefully be the one that brings us the most royalties." Fair enough then.

*Sensible World Of Soccer* is the fourth incarnation in the series and it's likely to be the most comprehensive football game ever – on any format. Virtually every team from every country is included – if you want to play a friendly, pitting a popular team from the third division in El Salvador

**CANNON FODDER:**  
Fancy taking on Al Capone and his gang of cronies? Or how about a visit to medieval England? You can in *Cannon Fodder 2*.

against someone as obscure as Kilmarnock from Scotland then you can. And all the players have real names – something that US Gold's official *World Cup USA '94* failed to manage.

Not only is *SWOS* an arcade game, it's also a management simulation. You can play, manage or do both, and Jon Hare reckons that *SWOS* will effectively make all other serious footie games, both management and arcade, redundant.

The players are all valued and there is a huge

transfer system operating around the world – Jon and I signed Andy Cole for five million at PSV Eindhoven and we romped to the Dutch league title and European Cup Winners Cup. Cole couldn't score to save his life, mind. When this game appears, it could seriously effect absences from both school and work. Fortunately, we'll be able to play it at work. All day. Hurrah!

Bruce Forsyth is kicking his heels. His Amiga has lain barren for months as he patiently waits for

# TRACTIONS

**SENSIBLE GOLF:** Small men in check trousers remind one of Ronnie Corbett. This may not be the most sensible of golf games but it should be one of the most playable. Hopefully, the chaps will include some humorous features within the game. Maybe a tiny Ronnie Corbett?

was gloriously gory fun and its sequel should prove to be even better. The theme that level designer Stuart Campbell is working on is that of the 'universal soldier', where the little fellows get to travel through time to places such as Chicago in the 1930s and medieval England.

The idea is to destroy a particular world then head for a special pad where you get picked up by a spaceship and taken to the next A-team-esque task. Not that Jon Hare is taking this idea lying down – he doesn't feel that you need any

the arrival of *Sensible Golf*, the game that promises to be a tiny-sprited, top-down viewed, check-trousered extravaganza.

There are 72 holes and they are mixed and matched to make up 20 courses around the world – if you wish, you can travel the world and compete for an entire season. The players themselves are of similar size to their soccer counterparts but when putting on the greens, the screen zooms in. Of course, Sensible are not producing a golf game in the traditional sense – there should be a few gags along the way, although what form they'll take, they're not quite sure. It's the sort of stuff you bung in at the last minute, apparently.

## Rupert Bear trousers

There are four skill levels – the best players get to potter around in golf buggies while the worst have to lug the bag around. All the four characters sport choice checks and V-necks. Control itself is very much in the traditional swing and wristsnap bar vein, though you won't have to worry about your stance. And who wants to?

Hopefully (though perhaps not likely), programmer Jools will have the time to stick in a few quirky bits, though it remains to be seen whether the players will refer to each other in unpleasant terms when they play fine shots.

Many of us spent Christmas '93 merrily blowing away folk with our mice. *Cannon Fodder*

**SENSIBLE WORLD OF SOCCER:** Every team in every division in every country has been included in this, perhaps the ultimate football game, though how Kilmarnock got in we'll never know.

## SENSIBLE WORLD OF SOCCER, SENSIBLE GOLF AND CANNON FODDER 2

**FROM:** Renegade, C1 Metropolitan Wharf, Wapping Wall, London E1 9SS.

**TELEPHONE:** 071-481 9214

(*Sensible World Of Soccer*)

**FROM:** Virgin Interactive Entertainment, 338A Ladbroke Grove, London W10 5AH.

**TELEPHONE:** 081-960 2255

(*Sensible Golf, Cannon Fodder 2*)

**RELEASE DATE:** November '94

**DEVELOPERS:** Sensible Software

**PRICE:** All £25.99

spaceships, but it would seem rather choppy to jump from Beirut straight in to Chicago 60 years ago. And perhaps a tiny bit confusing. But we shall see.

The gameplay will be much the same as the first *Cannon Fodder* and it's likely that the difficulty level will be similar, although it's mooted that publishers Virgin would prefer the sequel to be a little easier. With bated breath, we look forward to what should be a tremendous trio.

Work in progress

# DAWN PATROL

## THE FIRST AIR WAR

**DAWN PATROL:** World War One fighter pilots had it tough and *Dawn Patrol* captures the excitement of aerial combat.

There is a veritable feast of air combat stories to be told from World War One and Rowan Software have tapped this rich vein of anecdotes for their latest flight sim, *Dawn Patrol*.

The game is written as an interactive multimedia history book combining real characters and detailing historically factual encounters. The pages of the book appear on screen and detail both the history and the mission ahead together with a small animation. Rowan feel that many players prefer realism because it makes for a better, more exciting game.

Back in the Great War (1914-1918) fighter planes were much slower than the hi-tech jets of today ('oh, really, I would never have thought'); you couldn't lock a missile on to your opponent in those days, it was pure head-to-head dogfighting and in flight simulator terms, this ensures that the combat sequences last a lot longer and involve more aeroplanes, and the action is pure close-up machine gun blasting which requires a tremendous amount of skill. Not courage though, because you're sitting at home in your bedroom.

Rowan's managing director Rod Hyde eventually picked out 20 planes that he felt deserved attention and the project was erm, off the ground, as they say. The pilots are French, German, English and American and on most missions it's possible to fly for either side.

Unfortunately, I only got to see the PC version but admittedly, it looks absolutely fantastic – the visuals are truly excellent. The Amiga version will automatically recognise the AGA chip, and in 32 colours, it should look pretty good.

The missions are not just restricted to air-to-air

ing 16°	Speed 76	Mph	Alt 30038	ft
Brq 29°	Range 5	Miles	Alt 7998	ft
Brq 29°	Range 5	Miles	Alt 0	ft
Enemy	Range 0	Miles	State Free	

combat. Tasks include demolishing balloons and blasting ground vehicles while trying to escape the attentions of the bloke firing on your tail.

They've also included something called 'balloon logic' whereby men in balloons can spot enemy aircraft and fighters, but if the enemy craft get too close the balloon can be winched down. Unfortunately, no serial link option is being planned but *Dawn Patrol* promises to be one of the best Amiga flight sims to date.

## N.I.B

And there's more! Here's a brief rundown of other games on their way...

**PINBALL ILLUSIONS:** At last. A pinball game with a multiball feature. We at AF can hardly wait.

*Marvin's Marvellous Adventure* is the title of 21st Century's forthcoming CD32 platformer. Marvin is a pizza delivery boy and to present this particular American dish, he must battle through a massive 90 levels and 10 different worlds. There are

six layers of scrolling, and from what we've seen it all looks rather slick, though whether Marvin has the personality to capture the hearts of CD32 owners, only time will tell. Due in September.

The eagerly-awaited *Pinball Illusions* with a multi-ball feature is due for release on both floppy and CD formats in November and we at AF are looking forward to it. Hurry up!

*Swallow Hastily* is not a good title for a game and those renowned visionaries ICE recognised this, opting instead for *Gulp!* (a fishular platform spectacle). Apparently the Earth is underwater, life as we know it is about to end and only Captain Gulp and the Aquarons can save the day – it should be packed to the gills with action.

It's with some trepidation that AF announces the official *Mr Blobby* game. It seems that Noel Edmonds' spotty pink pal is ripe for the full platform treatment and with bated breath we wait for Millenium to deliver the goods.

Thirteenth-century England was a time of Norman rule and the country was split into counties, each with it's own ruler. *Impressions' Lords Of The Realm* is a strategy game where you can indulge in sieges, build castles or engage in some fascinating crop-rotation sequences. There are posh digitised video sequences to add atmosphere and it should be out in October.

*High Seas Trader* is a strategy game which uses the first person perspective and with 256 colours, it should look tasty. There are some 120 ports to visit and the gameplay is affected by shifting political alliances in all of the countries. Available from Impressions, December-time.

**MARVIN'S MARVELLOUS ADVENTURES:** 21st Century's platform romp could be a big hit on CD32.

# CHARTS

Welcome to *Amiga Format's* monthly round-up of the hottest Amiga games around.

## TOP 10 BUDGET GAMES

- |                                      |                 |

**CANNON FODDER:** Take four small men and go off and shoot people.

**PREMIER MANAGER 2:** Still riding high in the charts after all this time.

**K240:** Empire building in space should start when the Chunnel is finished.

**MUPLC:** Surely they can't win the title for three seasons running. Oh, no.

# The Ammi Roads

## Civic Centre Car Park!!!! Op Weston Super Mare!!! Thur

Hey young people, listen up! You already know that AMIGA POWER is the World's Best Selling Amiga Games Magazine – you already know that we bring you the finest, coolest and funniest reviews and previews – but did you know that we're now on tour with the biggest bunch of skillage you've ever seen? Well – WE ARE!!

1975 has been THE year for the AMIGA, with such happenin' games as *Six Million Dollar Man Olympics*, *Vauxhall Turbo Viva Challenge* and *Triangle 2 - North Sea Ferry Wars*, and we'll be giving away hundreds of these games - AND MANY MORE in our barmy compos. We're just completely loopy we are! Why we haven't been locked up, we just don't know!

So come on down to the Civic Centre car park, Weston Super Mare for a morning of live entertainment and top thrills, including:

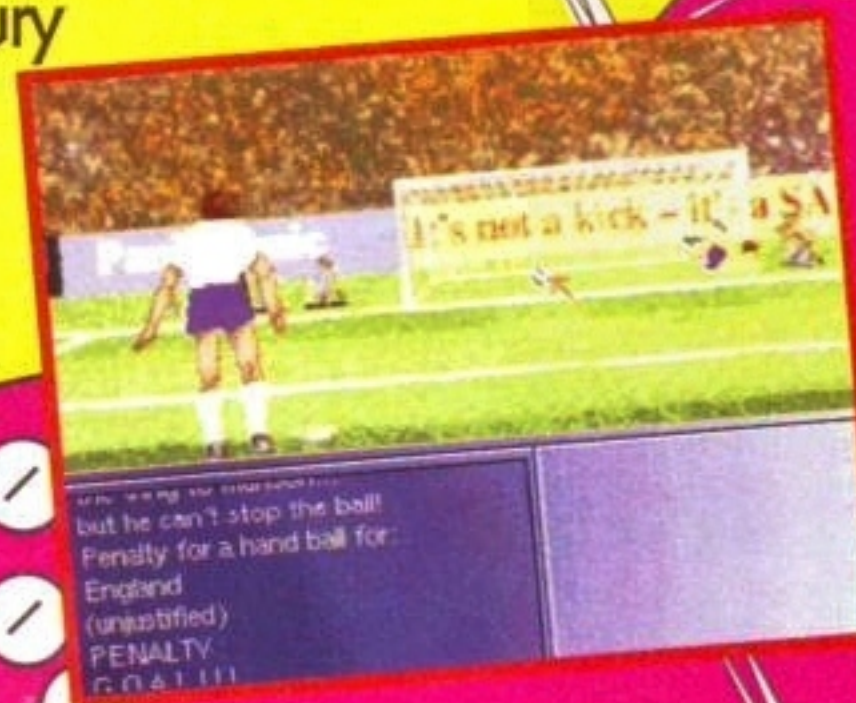

- On-stage review of System 3's stunning new A1200 levels 'n'

ladders game *Puny Squad*. It's so fab, we're giving away a massive 8 level demo on disk for everyone who turns up. Epic suss!

- Top AMIGA POWER eggheads explain the craze that's sweeping the globe - the Internet! With the help of diagrams drawn by Noddy Holder from Slade, we'll show you how to do everything, from e-mailing heads of state to catching up on all the gossip about your fave pop groups. Using a computer!!

- What's that, Amy? Hey, young people – Amy Power, our 19th Century porcelain doll, sez not to forget about the great reviews of new games such as *Kid Chaos*, *King's Quest 6* and *On the Ball*! Thanks, Amy!

# BETTER

# ga Power how!!!!

posite the Leisure Centre!!!!  
sday, August 18th, 1975!!!!

● Win a gear new CD-ROM drive. It not only lets you play CD32 games, but you can also listen to the latest single from The Bay City Rollers on it. For your man!!!

## PLUS!!!

● Maggie Philbin invites you to Egg The Ed!

● BA Robertson's Open Air Top Pop Singalongsong!

● You've seen our All-Time Top 100, but now it's our turn to listen to YOU!! Take part in our monster-mega survey and win

Amy's undying appreciation in compiling the definitive Reader's Top 100. Of all time!! No, really!!!

● Abba's Pop Palindrome Partython!!

...and don't forget that all the barmy inmates of the AMIGA POWER asylum and the cast of TV's famous Canoe Squad will be there too!!

See ya there, Thursday, August 18th mateys!!

# FOR BESQUARE!!!

# THEME

## BUILDING A DREAM THEME PARK

Anyone familiar with brush painting in *DPaint IV* will feel at home while building the park. Below are some of the basic components that make up the infrastructure of a successful park.

Pathways constitute the basic building block of the park.

You can create a basic queue to direct the punters to the entrance of rides...

...and tweak the design for maximum efficiency when the crowds roll in.

Junctions can be a profitable location for shops and stalls.

Plant trees and rose bushes to make the park seem more pleasant.

After placing your ride, choose sensible exit and entrance points.

# PARK

**Exclusive!**  
Amiga review

**T**he main aim of *Theme Park* is simple. Start out with a modest wad of cash, build, maintain and constantly seek to improve a Theme Park and squeeze every last penny of profitability out of it.

To do this efficiently and effectively, you must learn and master the mechanics and disciplines of the game, but even before you do this you must first build your park. This is deceptively simple to do. Imagine cutting and pasting brushes and creating a collage in *Deluxe Paint IV*. That's basically what it's like. Only simpler and faster.

After initially mucking about and placing things willy nilly, the game forces you to think in terms of design. The aim of this is to make the most efficient use of space to maximise the number of rides, shops and amenities that constitute a profitable Theme Park. This is easier said than done. Only after many plays does visualisation of space-efficient designs begin to take place in your mind's eye. By this time, you'll have interacted with the little computer people who visit

Continued overleaf →

the park. There's a lot more to these small folk than meets the cartoon graphic eye. Each one has sophisticated artificial intelligence algorithms programmed into their metaphorical little brains.

Apart from the initial sum of money you get at the start of the game, these people are your only source of income and need cultivation as a profitable resource. Each of them has their own traits and preferences, and acquainting yourself with their peccadilloes makes sense.

For example, young people pay most attention to the exciting rides. The more exciting rides you have, the longer they'll stay in your park. The longer they stay in the park, the more they'll spend on the rides and food. The more they spend, the more profit you make. The more profit you make, the more you'll be able to spend on building exciting rides. The more exciting you make the rides, the more young people you'll attract - ad infinitum.

**Swings and roundabouts** Young people are only one of several niche types worth exploiting. But what about the oldies? They've got money to spend too. But their wants and needs are different. They're more likely to be impressed by facilities such as toilets, the amount of litter on the ground, the pleasantness of the surroundings and the quality of the amenities. So catering for older people should be a consideration too.

To aid you in your understanding of what the punters are thinking, you can opt to question them as they walk about the park - a form of instant market research. Replies are shown as thought bubbles above their heads.

1000	2000	3000	4000	5000
6000	7000	8000	9000	10000
11000	12000	13000	14000	15000
16000	17000	18000	19000	20000
21000	22000	23000	24000	25000
26000	27000	28000	29000	30000
31000	32000	33000	34000	35000
36000	37000	38000	39000	40000
41000	42000	43000	44000	45000
46000	47000	48000	49000	50000

The rides are one of the most important parts of the park. That's why there are so many of them.

Successful negotiations with your staff and suppliers are an important part of running a happy business.

There are many grumbles to be gauged. They can take the shape of the person being too hungry, too thirsty, peeved at the price of admission, hacked off at the lack of basic facilities, disappointed in the attitude of the staff and so on. There are so many of these that it takes ages to remember them all.

**"Be prepared for a never-ending, nerve-wracking rollercoaster ride to game addiction hell and back."**

Keeping the almost innumerable variables balanced in your head is one of the great strengths of the game, but due to the very nature of the game's goals and mechanics, there's no perfect way to run the Theme Park and you'll constantly think of new ideas and approaches. Not one single theory can claim supremacy.

The highlighted question mark lets you find out what the punters are thinking about the services and rides.

Regular checks on financial performance help cut waste, boost performance and build a profitable Theme Park.

It's a mathematical model of life in a micro consumerist environment. In fact, if the mayor of Sim City met Rogue Supermarket Manager in a Theme Park, they'd probably dream up Peter Molyneux's prodigy. *Theme Park* lets you realise the dream.

It's a test of your intellectual capacity and ability to juggle figures in your head. Propeller-head marketing whizzkids with attitude, perceptive advertising people, retail managers with flair and anyone else who's ever balanced a budget will find rewards in the boundaries of this cyberspace Theme Park.

**Big wheel of fortune** The poorer your strategies, and management skills, the quicker you fail - just like real life business ventures. But this time, bankruptcy means that you can start afresh without the worry of the bailiffs coming round to haunt you.

The way that the four core marketing concepts of product, price, place and promotion meld together to form such an entertaining whole is amazing. Marketing is as boring a subject as economics, yet *Theme Park* builds on these rudiments in a way that induces worryingly compulsive behaviour.

If you buy this game, set aside a pre-ordained time. Set an alarm if necessary. Do not overstep this time. If you do, prepare for a never-ending rollercoaster ride to game addiction hell. It's that intense. So hey, be careful out there.

Steve McGill

## THEME PARK

### PROGRAMMERS

Bullfrog: MC Diskette, Demis Hassabis, Peter Molyneux

### PUBLISHER

Electronic Arts 0753 549442

### PRICE

£34.99 A500 and A1200

### RELEASED

A1200 September 9,  
A500 Sept 23

### GRAPHICS

Cartoony, charming graphics. The real work's gone into the artificial intelligence routines.

### SOUND

Atmospheric. Sometimes the effects are sinister, at other times they're pleasantly twee.

### ADDICTION

Compulsive. Creates power-mongers of anyone smart enough to take the challenge.

### PLAYABILITY

So many goals and strategies that you'll probably be playing for years.

### VERDICT

**"If entrepreneurial skills are your strength, then beware - you're likely to be addicted to Theme Park for years. If not, you'll probably only be addicted for a few months"**

at time of going to press.

The backgrounds in every level of *Putty Squad* are sumptuous, detailed and incredibly colourful. But why am I telling you this, you can see that for yourself?

The GI Pups you can see on this pic scream out with such a pitiful yelp when Putty punches them that you almost feel like reporting him to the RSPCA.

Parachuting GI Pups are the worst. One minute you see a helicopter, and the next they're descending on Putty and lobbing grenades at him.

# PUTTY SQUAD

When System 3 announced their new platform game we posed the questions: will *Putty Squad* shape up? And will it stretch to a Format Gold score?

Even if political correctness seems like the tool of the devil intent on breaking free speech, you've got to question the ethnic ethics of this level – Palace of Baghdad. It seems just a teensy weensy little bit derogatory, if not racist, toward Arabs.

There are so many platform games on the market that, in order to stand head and shoulders above the crowd, a new game has to offer something special, if not unique, to interest the potential buyer.

*Putty Squad* contains several of the best platform game elements. The most important of these – in *Putty Squad*'s case, at least – are characterisation and attention to detail. *Putty Squad* oozes both of these features from each and every one of its pixellated, and beautifully-crafted pores.

## Flexible friend

Putty is the eponymous central protagonist of the piece and he's a loveable little amorphous blue blob – take a look at the boxout at the top of the opposite page to see just how malleable and flexible he is.

He can wriggle, stretch, punch, bounce, run, melt, absorb, mould and inflate himself – whatever the situation demands. The layout of the various platforms and the demeanour of the many denizens loan themselves perfectly to these types of manoeuvres. As usual with platform games Putty has been laden down with a quite

ridiculously dumb plot. So we'll not go into it in any great detail here, other than to say that Putty's task is to rescue several captured putties, collect stars to increase his

offensive powers and make hilarious use of his ex-enemy – Dweezil The Ginger Cat.

The captured putties are strewn across each level in locations that vary from easy to find to just about, but not quite, impossible to fathom. Access to some of the areas requires ingenuity on the part of Putty's controller. And that's one of the main hooks of addictive gameplay.

If *Putty Squad*'s gameplay merely rested on the traversing and negotiation of tricky platforms, it would quickly falter and bore the gamer to tears. But no, all of the levels are dripping with effective, well-animated and humorously cute, cartoon-style guardians. Some of them even exude the same charm and strength of character as Putty or Dweezil themselves.

## Malleable mate

Take a look at these: Firework Imps, Frogs, Security Chickens, Hoodlum Chicks, Terminator Carrots, Cockroach Clusters, Floating Fakirs and, well you get the gist. And there are loads more would-be protectors.

The platform world inhabitants try to hinder Putty at every

## PUTTY'S PUNCH, STRETCH AND SQUASH WORKOUT ROUTINE

Stretching to the side helps Putty cover ground faster than he would by wriggling.

Melting like this helps Putty absorb various pick-ups.

Putty can jump as well as stretch.

And here's the standard Putty run.

Punches make a good meaty impact sound.

The upward stretch helps when climbing stairs.

X-Ray specs are useful for finding secret doors.

Absorb a Fire Imp and Putty can act like one.

Inflate. Handy for inaccessible places.

The Putty balloon is very handy for scouting around large levels and locating captured Putties.

available opportunity. Some are easy to despatch, merely requiring a Putty punch. Others can be jumped on and then punched. Others require more fire power to dispose of adequately. Luckily enough, there are quite a few options open to Putty to do this. Firstly, he can absorb some Nitro – one of several useful

objects lying around that Putty can use to help him in his quest.

Once he has absorbed the necessary pick-up, Putty can drop time delay bombs at will. This is an incredibly handy ability for

One of the more satisfying aspects about taking out the frogs is that they can be blown up. Pyromaniac alert.

There are bonus levels to be discovered throughout the game. Some, such as the one above, are incredibly difficult to complete. Which can be a good or a bad thing.

The funniest bit of the whole game is when Uncle Ted starts scratching and everyone else starts boogying.

disposing of assorted enemies and other bad things.

Another method of killing the harder toonies is to call upon the services of Dweezil. You do this by absorbing a tin of cat food and then making use of it to summon Dweezil to your present location.

### Pliable pal

If you let Dweezil kick Putty, he snaps his fingers, speeds off on his skateboard and leaves a countdown bomb. This is very useful, especially if you need to rescue a Putty that is protected by a ring of barbed wire.

*Putty Squad* is the best platformer that I've played for a while. The graphics are absolutely lush. The animation is top notch. The gameplay and difficulty levels are just about perfect and the attention to detail is staggering. All in all, a well-earned Format Gold. Buy it today.

# At SoftWood we have o ...we don't just rest on them!

When your software repeatedly wins the highest accolades in reviews worldwide, what do you do?

Work even harder to stay ahead of course! New Final Writer Release 2 is the latest result of our intensive development - it's even easier to use, and even more powerful. It's the best there is, and it's designed for those who expect the most from their Amigas. But, if you don't have a hard drive system, don't despair, we can still help. At SoftWood we offer you a choice of two Word Processor/Page Publishing packages.

But why TWO?

Well, this means that whatever specification Amiga you have, SoftWood have the perfect solution for your requirements - and always the most powerful possible for your system. Final Copy II is at the peak of what can be achieved when running with twin floppies, it's not possible to offer more without losing performance. Final Writer is the first and only hard drive compulsory Amiga word processor; the only package that doesn't make compromises to be floppy compatible!

## Final Copy II Release 2

Our word processors go beyond simply producing normal letters and documents, at which they naturally excel, and progress into a world where "how the whole document looks" is just as important as "what it says". Admittedly, this can be achieved with Desk Top Publishers - but they're not so easily used as word processors, especially when a good looking letter needs creating quickly - they're far too cumbersome.

Final Copy II offers the perfect balance between the two requirements... Ease and speed of use, with total control over the perfect printed presentation.

**Complete control over how documents look, now you have it at your finger tips on your Amiga!** Features include:

**FastDraw™** (on-screen drawing tools for use with the generation of borders, boxes and lines or arrows at any angle), Multiple Newspaper Style snaking columns, **PerfectPrint™** (the unique ability to use **Post Script™** outline fonts on absolutely any printer in either portrait or landscape) and Text Auto Flows around graphic objects and imported pictures (placed anywhere, scaled or cropped) with the highest print quality. Text can also be printed over graphics!

It's features like these that explain why there are some professional magazines, with 200+ pages, that are produced entirely with Final Copy II! Publishers, and many others, have quickly discovered that...

**No other Amiga Word Processor in the same category, and at such a competitive price, has all the capabilities Final Copy II users have always taken for granted! Isn't it time for you to take a look too!**

**SoftWood Direct Price: £49.95**

## The SoftWood Advantage...

Final Copy II (upgradable to Final Writer as your needs grow) and Final Writer are the only word processors that

give you **PerfectPrint™** - a unique printing advantage giving silky smooth Industry Standard Adobe™ Type 1 or Nimbus Q scalable outline fonts direct to **any** printer (even dot matrix and ink jet), in both landscape and portrait. Others use a restrictive and unnecessary jumble of different fonts with complex driver programs for outputting to various printers. The launch of Final Copy II introduced **FastDraw™** - a special set of structured drawing tools for constructing lines, borders, arrows, circles etc. directly on the page.

## Final Writer, extending innovation...

Now, as others are just starting to add similar features, saying they're 'revolutionary', Final Writer extends the innovation further with **FastDraw Plus™** - adding even faster and more functional options, including a new rotate command. Final Writer Release 2 is again leading the way with the introduction of **TouchTools™** and **PowerUser Bar™** technologies. These features give the user a definable area at the top of each document window where up to eight "one-touch" button strips can be configured. Each strip contains easily customisable sets of functions giving instant access to all the major commands/features - with a simple click of the mouse! There is even a set of buttons allowing "one-touch" selections of font style and size plus variations including Plain, Bold, Italic and Underline! It's no wonder we've received top reviews, ratings and awards from all the leading magazines...

## "What the Papers Say..."

**Amiga Shopper...** "Final Writer is the closest thing to Microsoft Word to appear on the Amiga" **Amiga Computing...** Final Copy II voted "Best DTP Package" **Amiga Shopper...** "If ever there was a good reason to buy a hard drive for your Amiga, Final Writer is that reason - Amiga Word Processing has come of age with Final Writer" **Amiga Format...** Final Copy II is "The Best Word Publisher" **Amiga Pro...** "In comparison (to Wordworth 3), Final Writer 2 is slick, solid and reliable and... is a damn site more usable" **Amiga User International...** Final Writer is "a powerful program that produces excellent results" **Amiga Computing...** Final Writer is "easily the most configurable Amiga WP ever" **CU Amiga...** Final Writer is the "most powerful WP ever to grace the Amiga" **Amiga Format...** "I'd go for Final Writer over Wordworth (3) - Final Writer is a joy to use"

## NEW Final Writer Release 2

Final Writer was launched last year with the power user in mind. It is the Amiga's only Hard Drive compulsory word processor - neither performance nor features have been compromised to maintain compatibility with floppy drive only systems. As well as having a unique list of features for the author of longer documents and publications - automatic indexing, table of illustrations, table of contents and bibliography generation - Final Writer with its **TextBlocks™** was the first word processor to put a character (or group of characters) anywhere on the page, at any size and any angle. It offers a virtually unlimited ability for effects with graphics and text. Just like Final Copy II, Final Writer also includes **PerfectPrint™** and has a set of tools to create structured graphics with new **FastDraw Plus™** (now with additional functionality that includes new options like rotation). And... you can also access features unique to SoftWood

### Tools™ & PowerUser Bar™

"one-touch" technologies. Simply 'clicking' a button, means you can define, change and save such things as the 'Paragraph Styles' (ie. Font, Font Size, Text Position, Bold, Italic, Underline etc.) and 'Layout Options' (left, right, centre or justified, bullets, line spacing, indents etc.). The options you have through single button selections are nothing less than remarkable! Indeed, one magazine heralded these as "the closest thing to Microsoft Word to appear on the Amiga"! Also uniquely, Final Writer can import, scale, crop, view on screen and output structured PostScript EPS clip-art images (we supply a hundred free with the package) to any printer (>2mb system RAM required). And... if you own a PostScript printer Final Writer is the only word processor with a set of output options including scaling, crop marks, thumbnails, and half-toning. Combine features like AREXX/Macros and

Actual Clip Art as Supplied

**Text Clips™**, with others new to Final Writer, including floating palettes and UNDO/ REDO (on text, formatting and graphics actions) - and you have... **Final Writer Release 2.**

Available now from SoftWood Direct (and all other good Amiga software stockists) - offering you the...

**Perfect Word Processing/Page Publishing Solution.**

## Introducing - SoftWood Direct

We recently surveyed a sample group from of our tens of thousands of users asking for their opinions or comments about our software. The results were overwhelmingly positive with many users saying that **they regretted not buying Final Copy II or Final Writer much sooner!**

When we asked them why they hadn't, the most common answers were price and availability, combined with the fact that they often had another word processor they'd owned for some time or had received free. They couldn't see the need to upgrade! Once they had however, and found just how much more easily and more productively they could work, and how much better the output could be from their own printer... **they couldn't believe what they'd been missing!**

When you can buy a brand new Amiga for under £300, it's obvious that software has got to be priced competitively. Even now though, some Amiga software vendors are raising their prices to counter faltering sales. Some even charge you, again and again, each time you call them for support! Our increasing sales mean we can now lower our prices to the best we've ever charged! Buying from SoftWood Direct ensures you get **the Best Possible Software at the Best Possible Price!**

But... don't just take our word for it; magazine reviews of Amiga word processors in the UK, and worldwide, have bestowed higher marks and more awards on Final Copy II and Final Writer than any others. We prefer not to say we're number one - the experts do it for us! Our packages have consistently been acclaimed for their "bullet-proof" reliability right from the day of launch. SoftWood software **works first time, every time!**

We listen to feedback from our users... and we act on it! We're so confident you'll be delighted with our programs, we now offer a no-risk chance to find out. SoftWood Direct's promise to you is that if you find we don't live up to any of our claims... **We'll give you your money back!** When you've decided you're completely happy, by simply returning your registration card you'll qualify for **free lifetime technical support.** And... Final Writer owners will also receive **50 additional outline fonts, completely free of charge;** Fonts that others may charge £££'s for.

**Call Today...** to find out what you've been missing!

Bubble And Squeak has a shoot-em-up level at the end of each world. And the little chaps get to ride in a fine craft.

Neon City is the last of the worlds and it's as tough as boots that have seen better days. Charlie Brown-ringer, Bubble, takes it all in his stride.

# BUBBLE AND SQUEAK

**There's nothing like a mess of fried potato and cabbage for breakfast. Except... bacon, eggs, sausage, tomato and chips (with beans).**

Everyone needs a pal don't they? *Subbuteo* was always a much better game with two – crawling across the carpet on your hands and knees trying to perform for both teams of mini-men became a bind after a while, particularly when attempting to avoid the floodlights. However, I digress.

Bubble (the one who squeaks) has a pal – a very stupid one, but a pal nonetheless, and for that he must be grateful, though perhaps not eternally.

Bubble and sidekick Squeak (the one who is too stupid to squeak) never get to play *Subbuteo*. No sir, for their task is to (oh no, it's daft plot time) rid the formerly joyous planet of Grool of the heinous villain, Kat Of Nine Tails and his accompanying band of cronies.

The title screen warms the very cockles of your heart, delightfully portraying Squeak providing a comforting, protectively pally arm

across the shoulders of Bubble, yet this glowing image couldn't be further from the truth.

Let me explain further. You don the cloak of Bubble, a short, balding young fellow while Squeak is the sidekick. You have to do all the work while Squeak, your be-masked, red-nosed chum follows automatically, a short distance behind.

And now the dilemma. In order to complete a level, you must usher Squeak to the top of the platform giving him a firm handshake upon

realisation of the task – there are two ways that this can be accomplished.

You either let the blue chap come along for the whole ride, in which case extreme care must be taken when dealing with the nasties, or you can leave him on his own (risking baleful glances from your plump pal) while you clear the level of any obstacles before returning to escort him to the summit. Every time you pull down on the joystick,

Blow away the nasties and spinning coins appear for a few seconds. Collect a few to buy the candy to make Squeak a superpal.

Bubble makes one of two squeaky remarks; "come on", or "wait here".

Now as you can imagine, playing a platform game involves wagging the stick in all directions and at times you find yourself wandering across ledges, shooting fowl and the like, with the squeaky remarks ringing in your ears – poor Squeak doesn't know whether he's coming or going and you often have to backtrack and check he's OK.

Even with Squeak at heel, there's no guarantee that he can perform the manoeuvre you've just finished, which leads to moments of hair-tearing frustration. Imagine you're close to the summit, one more ledge to scale, Squeak but inches behind. You hop triumphantly skyward with consummate ease while your red-nosed pal misses the ledge completely and drops half-way down the level. He can be very stupid.

But we shall let it lie. We shall also let the fact that the levels gradually fill with water lie. It's not a problem early on but in the trickier, later levels it can be a mite

disheartening as you attempt to get Squeak above water before seeing him drown horribly. Sob.

*Bubble And Squeak* also recognises joypads, which eliminates the problem of making Squeak stop and start by accident. So gripes aside, let us celebrate what is essentially a jolly platform romp. The 30 levels divide between five worlds and at the end of each one there's a shoot-em-up section to add flavour – the craft in which our pals travel is a Stingrayesque delight. And 10 bonus levels are also crammed in.

As is the tradition, the levels are by no means bereft of pick-ups. Collect the coins and you can buy Squeak gumballs which gives him a superpower – he becomes a tad more useful after consuming his favourite confectionery.

The worlds are reasonably varied, the puzzles are solvable and the levels organised – you never find yourself jumping on a wing and a prayer. *Bubble And Squeak* can frustrate but its endearing qualities pull you round and you end up grinning, albeit with one lip slightly curled.

Steve Bradley

Charlie Brown meets Zebedee. Unfortunately, there's no magic roundabout in sight.

Squeak is not long for this mortal coil as he gradually submerges.

Our pal in blue looks on in horror as his balding chum, Bubble, gradually sinks to the depths. And drowns horribly.

Upon completion of a level, the little fellows shake hands with gusto.

Poor old Squeak. He can see the gumball machine yet Bubble doesn't seem inclined to invest in any candy.

Eek a worm (sounds like a good name for a reggae band)! An air of uncertainty surrounds our heroes' quest.

And pigs might fly. Bubble can jump mighty high and has the added bonus of a hand that can shoot stars.

## BUBBLE AND SQUEAK

### PROGRAMMER

Alex Slater

### PUBLISHER

Audiogenic 081-424 2244

### PRICE

£29.99

### RELEASED

Early September

### GRAPHICS

1 2 3 4 5 6 7 8 9 10

Peanuts on acid. The parallax scrolling is fluid and the protagonists have character.

### SOUND

1 2 3 4 5 6 7 8 9 10

The music is pleasantly pipeful although Bubble's squeaky voice grates after a while.

### ADDICTION

1 2 3 4 5 6 7 8 9 10

Tricky one this. If you can see the comedy in Squeak's idiocy then you'll play for hours.

### PLAYABILITY

1 2 3 4 5 6 7 8 9 10

Less frustrating with a joypad, this is frolicsome fun. Great for committed fans of the genre.

## VERDICT

**"Bubble And Squeak rides a fine line between hair-tearing frustration and endearing platform fun. The characters make the best double act since Morecambe and Wise."**

We are open...  
MON to SAT 9.00am to 5.30pm,  
Wednesday 9.00am to 1.00pm

## How to order...

**BY PHONE:** Phone our Order Hotline with your Access, Visa, Mastercard, Connect, Delta, Switch or Lloyds Card giving card number & expiry date (most Debits, Carrys, and other 'store' cards are Lloyds Cardcharge and are happily accepted by us) & issue number where necessary (eg. Switch etc)

**BY POST:** Make cheques, bankers' building society drafts or postal orders payable to GORDON HARWOOD COMPUTERS. (Personal/business cheques take 7 days to clear from day of receipt whereas your order will be despatched). Please send Name, Address, and most importantly if possible, a daytime Telephone Number along with your order requirements. Please check you are ordering from our latest advertisement before ordering (phone if you require confirmation).

**PRICES:** Please remember that for example "September issue" magazines may be on sale during July, meaning that prices and offers advertised therein (which may appear up to date), could have been changed (we often have to provide artwork to magazines up to a month before the magazine is on sale). We therefore reserve the right to alter a specific item or pack price (either up or down) in the unlikely event of the cost price we pay changing. Please phone FIRST! **EXPORT:** Most items are available at TAX FREE PRICES to non UK residents and service personnel. Please contact us for confirmation of export prices before ordering.

**FREE DELIVERY:** By Parcel Force (UK Mainland only) OR SPEEDY NEXT WORKING DAY COURIER SERVICE. Add just £3.95 per major item for guaranteed delivery (or £10.00 for Saturday delivery). UK Mainland most regions. (Despatch normally on day of order or payment received). Overseas rates on request.

All listed prices are what YOU PAY, and there are NO HIDDEN COSTS. Prices are correct at time of going to press (Price details may vary from time to time). Offers and Services are subject to availability and to being the latest advertised products, prices and prices. Please note goods are not supplied on a first basis. **EMAIL:**

## Why Harwoods?

WHEN THERE ARE SO MANY DEALERS TO CHOOSE FROM WHY SHOULD YOUR CHOICE BE GORDON HARWOOD COMPUTERS? Well here's just a few GOOD reasons...

### FREE SERVICE POLICY...

- NEW Replacements for faulty goods (first 30 days)
- FREE UK Mainland collection of major hardware units requiring warranty service in the first year (unless on-site warranty is applicable)
- FREE rapid courier return of serviced products
- ACCESS to our ex-directory Customer Helpline

### 'LifeTime' Warranty Plan

Add an Extended Warranty to ANY hardware from Harwoods! Take up to 5 yrs cover & at the end of that period extend again on an annual basis... Thus, a LIFETIME'S PEACE OF MIND. Fully transferable, enhancing resale values! Even available on hardware purchased elsewhere - Phone for details!

## THE ACCLAIMED BLIZZARDS The BEST Price & Performance Around!!!

### 1220/4 Turbo Memory

Even more powerful than its predecessor (which had already received the coveted Amiga Format Gold Award).

- 4Mb AUTO-CONFIGURING 32Bit FAST RAM as standard (with an option of a further 4Mb to a total of 8Mb).
- Integrated Clock Speed Doubler to run the FAST RAM at 28MHz - overall performance increase up to 300% over a standard A1200
- Integral Battery-Backed Real Time Clock
- Board can be disabled WITHOUT removal - full game compatibility
- Sockets for Maths FPU & Crystal-68881/82 upto 40MHz speed.
- Retains computers on-site warranty
- Easy to fit in computers Expansion Trapdoor
- Latest SMT (surface mounted technology)
- Full 12 Months Warranty

**BLIZZARD 1220/4Mb BOARD** £229.95  
**4Mb RAM EXPANSION (Blizzards Own)** £169.95  
**33MHz FPU MATHS CO-PRO** £69.95

### 1230-II Turbo Accelerator

Choose either... 40MHz or 50MHz Accelerators to make your Amiga A1200 REALLY FAST!!!

- 400-500% performance increase on all applications (when the 1230-II Board has 1Mb. or more RAM installed).
- Optional fast (up to 10Mb/sec) DMA SCSI-II interface for CD ROM etc. (CDTV, ISO-9660 Formats, Removables (eg Syquest, etc).
- 40MHz 68EC030 CPU or 50MHz 68030 CPU with MMU
- Up to 50MHz 68882 PLCC/PGA FPU's (Maths Co-Processors)
- Up to 64Mb of 32-Bit RAM using standard 72 Pin SIMMS
- Easy trap door installation. Does NOT invalidate warranties
- Incorporates a Battery backed real time clock

**BLIZZARD 1230-II TURBO (0Mb.) 40MHz 68EC030** £244.95\*  
**BLIZZARD 1230-II TURBO (0Mb.) 50MHz 68030 & MMU** £329.95  
**1Mb. RAM Exp, 32Bit SIMM** £49.95  
**4Mb. RAM Exp, 32Bit SIMM** £139.95  
**33MHz FPU** £69.95  
**40MHz FPU** £79.95  
**50MHz** £89.95  
**NEW...SCSI-II Module** £89.95

**BUY ALL 3 ITEMS MARKED\* (see right) TOGETHER AND GET AN EVEN BETTER BARGAIN... £439.95**

## POWER Memory/Accelerator Boards

**Viper 68030 Turbo**

VIPER 2Mb (No FPU) £238.95  
VIPER 4Mb (No FPU) £308.95  
VIPER 8Mb (No FPU) £478.95

- Full 030 and MMU running at 28MHz
- Optional FPU running at up to 50MHz
- Standard 72Pin SIMMS sockets, RAM upgradable to 128Mb using 1.2,4,8, 16,32,64 or 128Mb SIMMS
- Optional SCSI adaptor and 68882 Maths Co-Processor
- On Board battery backed clock

### POWERPC 1202-8 ACCELERATOR/MEMORY BOARDS...

IF YOUR DRIVE IS FITTED BY OUR ENGINEERS, FOR JUST £25, YOU WILL BENEFIT FROM...

- Speedy collection of your Amiga
- Fitting by experienced technicians
- Hard Disk configuration including installation of back up and repair utility software
- FULL 1 Year HARWOODS GOLD warranty on BOTH Hard Drive AND existing computer!
- Courier delivery back to you
- Formatting with Workbench installation

**NO ONE ELSE OFFERS ALL THIS... you normally get warranty ONLY for the Hard Drive!**

### NEW A600/1200 Portable/External Hard Drives

**OVERDRIVE**

**OVERDRIVE '25'**

**ARCHOS**

**AmiQuest**

**FAST, FULLY PORTABLE, & EASY TO FIT!!!**  
This fantastic new standard 2.5" IDE Drive is FASTER than those internally fitted by Commodore, and... it's TRULY PORTABLE! Super Compact Design that fits into your Pocket for True Portability - Weighs Only 288g! Fitted Footprint only 7.6x11.5cm (3"x4.5") Plugs straight into PCMCIA Slot Faster Access Times than Internal Drives Can be used as a 2nd HD - ideal for backups High Quality Robust Casing Supplied complete with Installation Software 12 MONTHS WARRANTY!

Capacity	85Mb	130Mb	250Mb	340Mb
PRICE	£224.95	£259.95	£339.95	£409.95

### A1200 External Hard Drives

An EXTERNAL Hard Drive that plugs into the PCMCIA slot of your A1200 & retains its FULL Commodore Warranty!

**THE EASY TO FIT ANSWER FEATURING...**  
ABS Casing styled to match your A1200, 2Mb/sec FAST Transfer Rates, Manual & Installation Software, Independent PSU, ALL our Overdrives are pre-formatted, fully tested and ready to go!

Capacity	210Mb	340Mb	420Mb	540Mb
PRICE	£249.95	£289.95	£299.95	£374.95

### A4000 FASTLANE Z3 SCSI II INTERFACE

Fast (upto 10Mb/sec) DMA SCSI-II interface for CD ROM etc. Expandable up to 64Mb of 32-Bit Fast RAM Requires no Buster Chip upgrade! Compatible with existing 4000's 4 x 32-Bit SIMM Sockets Exceptional Value at Only... £329.95

COMING SOON!!

## HARWOOD REAL TIME 24 BIT COLOUR COMPOSITE VHS VIDEO DIGITISER

WE'RE EXPECTING A GREAT NEW DIGITISER AT A FRACTION OF THE COST YOU'D EXPECT!  
 ☆ Grab images in 16.7 Million Colours ☆ Use Any Video Source (ie. Video, TV, Satellite, Video Camera etc.) ☆ 512K of Built In Memory ☆ Can be used on ALL Amigas with Kickstart 2.04 or higher and 1.5Mb RAM min.  
 ☆ Max 24Bit Buffer Res. 736x283 or 736x512 (interlaced) ☆ Max Display Res. up to 1472x512 HAM8 (on AGA machines) ☆ External fitting via supplied cable (for convenient desktop location) ☆ Colour Co-ordinated ABS Casing ☆ Includes PSU ☆ SMT Technology ☆ Full Status Confirmation LED's ☆ Optional Teletext Decoder available soon

**FANTASTIC VALUE VIDEO DIGITISER Around...£129.95**

## HAMA GENLOCKING EQUIPMENT

A GREAT RANGE OF GENLOCKS FOR ALL AMIGAS THAT WILL GIVE YOU PROFESSIONAL VIDEO/COMPUTER EFFECTS - Phone for in-store demonstration.

### HAMA 292 GENLOCK

S-Video and Composite Compatible. Incorporates Single Fader Control, RGB Colouration Controls etc.

**Call for latest price!**

### HAMA 290 GENLOCK

S-Video and Composite Compatible. Incorporates a Video Mixer, Dual Fader Controls, Monitor Throughport etc.

**Call for latest price!**

## GREAT SUPRA PRODUCTS

### A500/500+ TURBO 28MHz ACCELERATOR BOARDS

Compatible with ALL A500's & A500 Plus (Please ask about 1500/2000 versions)

1. Plugs into sidecar/expansion slot
2. Speeds up Amiga - up to 4 TIMES NORMAL speed!
3. Throughport for RAM/HD Exp. etc.

Amiga MUST have some FAST RAM (only std A500 Plus does not). Any sidecar or GVP HD RAM already fitted is FAST RAM.

**A1200 Performance...£129.95**

### SUPRA AMIGA FAX/DATA MODEMS

**144LC FAX MODEM V.32bis** £144.95  
 Transmit & receive faxes and data at up to 14400bps. Amiga cable & modem to modem COMMS s/w included. (Fax software available separately SEE DETAILS).

**144LC FAX MODEM V.32bis** £144.95  
 Transmit & receive faxes and data at up to 14400bps. Amiga cable & modem to modem COMMS s/w included. (Fax software available separately SEE DETAILS).

**FAX PLUS MODEM V.23bis** £114.95  
 Transmit & receive faxes at 9600/4800bps & data at 2400bps. Amiga cable & modem to modem COMMS s/w included. (Fax software available separately).

### NEW SUPER FAST SUPRA FAX MODEM

**288 V.FAST FAX MODEM** £244.95  
 Fax at a stunning 14400 bps or send Data at an even more remarkable 28800 bps!!! Amiga cable and modem to modem COMMS software included (FAX software available separately)

**SPECIAL OFFER...** GP FAX SOFTWARE required for any of the above to transmit & receive faxes... **ONLY £49.95**

## AMIGA RAM (MEMORY) UPGRADES

# The Best Selling Word Processor and Database for the Amiga...

## Pen Pal

Since its launch, Pen Pal has become the most popular package of its type!

Not surprising when you consider the array of extensive features at your fingertips. Combined with its user friendly simplicity, it was bound to be a winner!

Amiga Format, when reviewing word processors, said there was "little to fault Pen Pal". Quite a prediction it seems as in a later feature they confirmed Pen Pal was "still the best value for money".

If you're not already a Pen Pal user, we hope you soon will be - because at the new lower price of just...

**£39.95rrp**

the current Best Seller is bound to sell even better!

Pen Pal is a superb package with immense power to fulfil all your Word Processing needs, and... a truly comprehensive Database too! Pen Pal is easy to use though and the extensive 250 page manual is on hand should you need it. Users frequently tell us that they've never found a program they get on with so well.

**The Word Processor:** Open multiple documents simultaneously; search & replace; cut, copy, paste; check your spelling with a 110000+ dictionary; import your favourite IFF/HAM graphics or clip art files in various sizes & colours; auto flow text around graphics (even as you type); view a full page then position, edit & create graphic objects; use the forms designer; ALL THIS and much more! From the documents on this page you can see this is no ordinary program!

**The Database:** With 32 fields per record, 32000 records per database & FAST sort of 1000 records in less than 5 seconds, this is a REAL database. Mail merge information into the word processor simply and create templates for letters, reports etc. into which data can be merged too!

Remember that just like other SoftWood Products, Pen Pal comes with free telephone support!

Pen Pal is compatible with any Amiga - from the A500 to the latest A1200/4000 ranges with a minimum of 1Mb available free RAM. Available from all good Amiga software dealers or SoftWood. Please phone for a list of nationwide stockists.

A digression from the original *Ishaar* is the inclusion of animated sequences, such as this one.

It doesn't matter whether you're a paragon of saintly goodness or the personification of demonically malignant evil. If you crave security, you need some form of insurance policy. Especially if you happen to be in the business of malicious wizardry and have set your twisted mind on getting the fair people of the mightiest kingdom in *Ishaar* under your ghastly thrall. You never know, pesky adventurers might pop up at the most inopportune moment and spoil your best-planned strategy for oppression.

That's what happened in *Ishaar 2*. Shandar, the malevolent sorcerer anti-hero of the piece, was defeated and banished to the netherworld reserved for failed malignant tyrants.

Unfortunately for *Ishaar*, the kingdom of Kendoria and its

# ISHAR 3

## THE SEVEN GATES OF INFINITY

**It has an even more convoluted plot than the first two *Ishaar* games. But does it improve upon them?**

misbegotten inhabitants, Shandar took out an insurance policy in the shape of a third party planetary fire and conjunction clause.

Yes, as soon as two of the moons, the sun and the planet *Ishaar* align, Shandar can cash in his policy and transfer his spirit to the body of a Black Dragon with a name that sounds like Weetabix (Wohrntax). If

this happens, the land of *Ishaar* will be blighted.

Of course, this horrible scenario can be thwarted if you turn up at the right place and time – time travel features heavily throughout the game. Seven different eras and key plot points await visitation.

The engine driving the game is the same as the previous two *Ishars* – lots of mouse clicks and traipsing around to gain money, arms, armour, spells, character interaction, combat and stuff. Several changes have been made to the chassis however. The most noteworthy of these is at the start of the game. Aside from the ability to load in your favourite party of characters from

The map of the city before it gets cluttered up with marker flags.

previous *Ishaar* excursions, you can also create a brand new party.

All of the major features – race, class, appearance, strength, constitution, agility, intelligence and wisdom are under the RPG'ers control and the abilities can be

Not quite as flexible as the *Tardis*, this is the first of the Time Portals that you have to explore.

### TOOL UP AND HIT OUT

Anyone familiar with the *Ishars* of old will recognise the inventory screen. Anyone else is going to have to take our word for it that they're the same.

Combat and control panel. Again, it's the same fare as of old.

Arrange fighting positions with this tool.

You start with about two spells. This guy's lucky.

The character interaction screen. From here you can hire, fire, hot wire and heal fellow adventurers. It's debatable whether this is a good thing or not.

Harry the demon never quite managed to scare anyone.

adjusted in order to capitalise on the class chosen for that character. Creating a party from scratch helps to speed up the game.

Other changes include location flagging on the main map – if you visit a tavern, from that point onward it's pinpointed with a flag on the map. Each location, be it tavern, shop or armourers has a colour code. This is pretty handy even though the map inevitably ends up looking cluttered and messy.

The last of the changes worth noting is the inclusion of photo-realistic townspeople and assorted characters. The addition of these background characters means fewer U-turns, wrong turns and less general directional disorientation.

Oh, and the other reason for the characters being there is to enhance the atmosphere. But it doesn't quite work. Leather-clad fetishists rub shoulders with cider-swilling country bumpkins – the effect is ludicrously laughable rather than atmospheric. Worse still, these characters can't be interacted with, conversed with or fought with. It's a flaw and it spoils the role playing flavour.

Gripes aside, *Ishar 3* is still recommended. Especially if you're a fan of either of the previous incarnations. The same criticism still applies to the actual mechanics of the gameplay – most of your time is spent traipsing around looking for fights to gain money before you can access the meat of the game in the form of puzzle solving and evil monster beating.

But, if that's the sort of thing you like, then *Ishar 3* delivers brilliantly.

Steve McGill

It's another of those pesky cardboard cut-out non-interactive city dwellers.

## ISHAR 3

### PRICE

£32.99

### RELEASED

Out now

### GRAPHICS

1 2 3 4 5 6 7 8 9 10

Familiarity makes the heart grow fonder. The graphics are still lush and lovely to look at.

### SOUND

1 2 3 4 5 6 7 8 9 10

Functional. Nothing to wax lyrical about. Combat could be a bit more bashy and clangy.

### ADDICTION

1 2 3 4 5 6 7 8 9 10

RPGers and *Ishar* fans will find *Ishar 3* addictive. Others may find the travelling time irksome.

### PLAYABILITY

1 2 3 4 5 6 7 8 9 10

Trudging around continually becomes tedious. Combat needs overhauling in this instance.

### VERDICT

**"A miasmic mish mash of apocryphal Tolkienism, cut and paste plagiarism, hack and slash institutionalism and engagingly evil endeavours."**

**72%**

# Coming soon

from the people who bring you

*Amiga Format*

It's an **essential** purchase

You just might not

realise it yet...

When running at top speed, pull down on the joystick and you spin, knocking out everything in sight.

**W**hen a small child is driven cruelly from his Stone Age homeland to an Artificial Environment Centre sometime in the future, his socialisation process is likely to be affected. Not for him a trouble free upbringing of cheese cloth shirts, *Screen Test* and camping holidays in the South of England. No siree. This kid is gonna have a whole load of readjustment problems.

And as luck would have it, I'm not talking utter nonsense (well, I am) because Kid Chaos has found himself in exactly this situation.

Sporting an outfit which would have

# KID CHAOS

done an extra from *West Side Story* proud, Kid Chaos wants out of the modern world. To get back to his prehistoric paradise he must batter his way through five worlds of platform action. This is no cutesy affair; the Kid has a club which he can swing indiscriminately, crushing everything in his path.

He can spin and knock everything out of the way and... oh I can't go on with this; Kid Chaos is Sonic The Hedgehog - replace the blue spiky thing with Kirk Brandon from popular Eighties rock combo *Spear Of Destiny*, bring to the boil and simmer. A recipe for success or half-baked nonsense?

original - but then you could say that about most platform fare. They range from Toy and Techno lands to Ruined Cities and Toxic Wastelands. No, what you get is speed - if you feel the need. Kid Chaos is one of the quickest fellows around - you bound along taking out the nasties and the power pods *a toute vitesse*, as they say somewhere abroad.

It's darned tricky though. At the end of each level you're informed of the damage done and as often as not only 50-60 per cent has been completed. And the task times differ greatly - on one level you may have 15 minutes to bob around while on the next it could be only 90 seconds,

Each level is littered with traps - spikes proliferate - sometimes you just can't get away.

Model cars and bullet-spraying airships are fiendish foes in Toy World.

Anyway, each world is split into four levels, some huge, some short but devilishly tricky, concluding with a classic-style arcade game at the end of each world, including a *Breakout* and a *Space Invaders* clone. And my, they are splendid fun.

But what of the meat? The worlds themselves aren't wildly

Technofear. Our Stone Age hero batters modern technology to pieces.

which means collecting as much time as possible, and it can be frustrating, particularly when the exit is elusive.

Some of the manoeuvring is very tricky, and you're often caught between grabbing the pick-ups, carefully avoiding the many traps and just bombing along hoping everything will be all right.

But Kid Chaos is a pretty comprehensive platformer. The worlds are varied enough to sustain

Hanging around underwater saps your energy levels, so head for the surface.

Steve Bradley

## ENTERING THE LAW OF CHAOS...

Batter the balls to break the walls.

Blow away those nine speeding barrels.

Hit the teddies and avoid the ducks.

Er... Wonder what you're supposed to do here?

Watch out for the spikes and shatter the ceiling.

## KID CHAOS

# D-DAY

## THE BEGINNING OF THE END

If the first casualty of war is innocence, then the first casualty of poor wargames must be patience. The initial test of your tetchiness comes when you're confronted with the tortuous terrain of the manual layout. Many wargames of this depth and complexity offer a quick-start tutorial. It familiarises you with the controls and quickly introduces you to the potential of the game – making the learning curve easier to climb.

The only thing is, *D-Day's* tutorial is the equivalent of "humping the boonies" for 10 miles at 100 degrees Fahrenheit with no water. I'm not joking either.

It's even a difficult task working out just why

the tutorial is so unhelpful. It may be that the game's user interface is just so unhelpful. There are loads of little buttons to press, but unfortunately, there's no visual or aural feedback informing you that you've actually pressed the button, or that the button press has registered with the Amiga.

Buttons like this should indent when they're clicked on – in gaming terms and user terms, it's good manners. Something that most gamers expect nowadays. Consequently, every time you play *D-Day*, it feels as if the programmers are being rude to you which is unsettling and ever so slightly distressing.

But no, the main reason for the tutorial's unhelpfulness is the way it's written and presented – no pictures, illustrations or diagrams. Learning curve times could have been drastically cut with the inclusion of at least a few cursory pictographs.

The game doesn't play that well either. It starts just as the landings are about to proceed. Control of the armies is by individual unit (divisions) and there is no opportunity to move divisions en masse, which is a shame.

Much of your time is spent tediously shuffling individual ground units around. Sure, productive use of all this movement can give the gamer a strategic edge, but so much time is spent doing this that you end up not caring what becomes of the units – just so long as you get them on to the beaches and marching eastward. Some sort of macro command would have been appreciated.

Individual battles are taken care of by the familiar (to some anyway) Micro Miniatures combat sequences. Take a look at some of the screenshots on the page to obtain a better idea of what they look like.

The Micro Miniatures help the gamer fight battles at an almost individual level. Like the rest of the game, the user interface is clumsy. But this part of the game is the most enjoyable, if only because you can split up units and try out manoeuvres.

If you're a die-hard, committed wargamer you may like *D-Day* – there's hours and hours worth of play tucked away in here. Anyone else should give it a miss.

Steve McGill

"We will fight them on the beaches." Or something.

Perched on the edge of danger, the allies prepared to advance.

Rewrite World Cup history with Ascon's *On The Ball*.

**Football's football. If that weren't the case, it wouldn't be the game that it is.**

# ON THE BALL

## WORLD CUP EDITION

**T**ake football management as the basic premise of a game. Stylise and refine the inevitable number-crunching textual element. Finally, wrap it up and lovingly encase it in lavish retina massaging aesthetics. Well done,

Attempting to keep everyone happy can result in a headache.

you've just about grasped the impact and concept of *On The Ball*.

Ascon are a German outfit and they're the people responsible for *The Patrician* (AF51 89%). Aside from being a very playable trading game, *The Patrician*'s main impact lay firmly at the door of its opulent, attention-grabbing graphics.

*On The Ball* adopts a similarly effective mechanism. Rather than being a traditional text-based grid system, each of the information and control screens is a scanned-in picture of a watercolour painting.

The operation is implemented by sweeping the mouse over the screen in the same manner used in adventure games. At first, this is a bit confusing. Football management game preconceptions are hard to break. Take a look at the control screen on the top right of this page.

All of the functions are logical and are related to their graphical representation. For example, if you want to see the latest headlines in the press, click on the newspaper on your desk.

This system of information presentation could easily have slipped into graphic overkill. Fortunately, the game engine and control system is slick, unobtrusive and reeks with playability.

The game viewed as a whole looks and feels like *Beneath A Steel Sky* or *Innocent Until Caught*. As such, you tend to end up concentrating on playing the game

rather than remembering abstract rules, results and fixtures.

The most important feature of *On The Ball* is the players. Their form is affected by all sorts of events, both physical and psychological. Remembering the performance of each one can make all the difference with team selection and overall rating. Thankfully, the players' abilities only depend on two traits, strength and form.

Form is the most volatile of the two. It can wildly fluctuate depending on external events such as training, domestic life, injuries, not being selected, personal talks with the coach (you) and response to

Chop and change your team at will from this screen.

NO PAIN, NO GAIN

Training can improve the form and strength of your team. The following is the training regime that you can choose to inflict on your players.

HEADER

Bannon plays it up front to Treanor... Treanor gets the ball in the penalty area... Treanor turns into his opponent and falls down theatrically!

the penalty area but the ball goes behind Penalty for a hand ball for: Scotland (I've seen them given before) PENALTY:

Match highlights with *On The Ball* are the best you'll encounter in any football management game.

Penalties are the one form of interaction in the match that the coach can take part in.

the media – an important part of the game is the performance of the coach at press conferences. Saying the wrong thing in public can affect the morale and consequently the form of the whole team.

Of course, these elements wouldn't be important if the mechanism and graphic representation of the game in play wasn't up to scratch. The game performance is the most fun. It uses a combination of textual commentary and animated highlights.

The highlights are the best I've ever seen in a football management sim. They use a combination of long, medium and close-up views of the action which cut and flow much like watching a water coloured *Match Of The Day*.

A genuine feeling of tension builds up when your team make a break or are under pressure from the opposition's attack. Despite the number of games I played in the process of this review, fatigue or boredom with the highlights never entered the equation. They still managed to induce mild excitement and that's got to be a good thing.

Good thing or not, there are a few gripes regarding *On The Ball* that afflict all football management games. And that's the sections where you're left to screen watch. The worst culprit is the training section. The

intention behind the training is player improvement – a good idea. Unfortunately, you have to watch the whole thing as a passive spectator. You can't click out of it or abort or speed it up, you just have to sit there like a lumpen mass and observe.

Admittedly, there is a running textual commentary which informs you of who's improving and who's not. But the achievements of individual players is summarised on a post training screen anyway, so why are you forced to wait? It's a dark grey, verging on black, mark against an otherwise very impressive gaming performance from Ascon.

Gripes aside, *On The Ball* is the best management game you'll play. It's atmospheric, addictive and incredibly playful. Recommended.

Steve McGill

Fine tune your match tactics from here.

TRAINING GAME

**“ This is Beneath A Steel Sky for football fans. *On The Ball* will grip you and won't let you go until you've won the World Cup. ”**

80%

This pooch-based game has gone to the dogs.

When you click on your chosen team, a handy football bounces on to the map pinpointing the geographical location of said team. It's most helpful.

# WORLD CUP USA '94

**O**h dear. Oh dear, oh dear, oh dear. The official footie game for the World Cup goes on sale well after Brazil have lifted the cup – and what on earth could have held it up?

Anyway, the box arrives on my desk and I bung the disks into my trusty A1200. Guess how long it took before I got two teams out on to the field for a kickabout? Go on. Six minutes and 13 seconds. So I play this really average footie game and decide I want to replay the game, as you do when reviewing stuff.

How long does it take to get the same two teams back out on the park? Well over four minutes, and no mistake, guvnor.

## Poor saps

*Sensible Soccer* takes a matter of seconds; *World Cup USA '94* a matter of minutes. When will these people learn? As luck would have it for US Gold (think irony here), the game was out on the shelves before we received a copy so the poor saps who rushed out and bought it weren't to know these trifling details. And Lord knows how long it takes to

The pitch is divided into nine sectors enabling you to tailor formations accordingly. Apparently.

Floored by Johnny Foreigner, Alvin stayed on the ground and the menace was booked. Hurrah!

load on an A500 (it's your job to know – Ed). Sorry Ed. However, it is hard drive installable which dramatically cuts the loading times, but this is one of the few points in the game's favour, and not everyone has the said desirable piece of hard drive equipment.

Anyway, what the hell's going on inside there to have to swap the disks twice to replay a damn game of football. And I swear, if I ever see the loading screen picturing that daft World Cup dog clutching a disk and sliding the shutter back and forth I'll, I'll... well I just will, right.

So I install it on to my hard drive and calm down a little. Upon loading, you're treated to a barrowload of pooch-based icons –

World Cup USA '94 is riddled with the 'incredibly daft icon' syndrome.

and they're baffling. What's wrong with words such as Friendly and Tactics? Why do you need lots of little dogs doing stupid things?

This game has more options than Sainsbury's have trolleys but what's the point when the basic standard of gameplay is below par, the major fault being that often you are not controlling the player closest to the ball. Yes, I was going to get around to the game itself. And I have.

## Nearest toilet

*World Cup USA '94* uses the now traditional top-down view but the sprites are horrible and run like people desperately heading for the nearest toilet. This is the official game of World Cup '94 – why are none of players' real names used? Answers on a postcard to US Gold.

This is by no means the worst football game ever, it's just that I can't think of any reason why you should buy it if you've already got *Sensible Soccer*, which is both smoother and far more playable. And easier to load. *World Cup USA '94* is desperately average and I'm disappointed because I had hoped this was going to be a real contender. Oh, by the way, the music is quite tremendous.

# PROFESSIONAL FOOTBALL MASTERS 4

VERSION

Quite simply the best Football management game for your computer.

We have served thousands of satisfied customers during our 4 years of trading. Over 10,000 man hours (during 5 years) has been dedicated to the production of this constantly improving game. It is one of the most realistic and accurate representations of a professional football managers annual challenge to tactically out wit and conquer every opponent.

**Managers :** 1 to 4 Human players, Ratings, Performance statistics, sack and offers. 3 Difficulty levels, Manager of the month and season awarded, Pools, Pick any team in any division to begin with.

**League & Cup :** Premier 22 teams, Division 1, 2 & 3 have 24 teams, Play-offs, Tables. 7 Cup competitions with precise rules (2 legs, extra time, away goal rule, seeded draws, European Cup tables, 5 subs, non-domestic player restrictions etc.), Finalist route to glory.

**Games :** Yearly fixture/previous list, Week fixtures/results, Results from previous meeting with opponent (goes back up to 6 seasons).

**Players :** Real life statistics reflecting the start of 93/94 season with real positions, height, age. Live transfer market, Contract & wage negotiations, Preferred foot (left/right/both), Loans, Injuries, Training, Special talents, Trainees, Goalkeepers (separate skill categories), Defenders, Midfielders, Attackers & Utility, Retirements, Foreign transfers, Unhappy players, Top 10 Hot shots.

**Team :** Training, Tactics (15 different styles), Aggression, Formation allows specific player field settings (Left winger, Sweeper etc.).

**Club :** Sponsorship, Ground improvements, View opponent, Finances The Match : Real time scoreboard reporting goals & injuries yellow/red cards, Sound effects, Interventions permitted at any time to change tactics, formations and make subs. Physical graphical penalty participation (optional). Over 80 different referees.

**Other :** Fast load/save, Printer access, 20 Options to set various game preferences, Instruction book, Easy to play, Technical support.

**Plus :** Over 100 other meticulous refinements impossible to list here.

**Editor:** Allows you to amend various items in saved games. £12 Extra

**Scottish :** Dedicated version full details upon request.

## STABLE MASTERS VERSION 2

This game has been designed to be as close to real racing as possible. Five years of development by a clever racing expert has led to the second revision of this Flat Horse Racing Simulation.

Up to 4 players can participate as Owner Trainers with the primary objective of becoming the top rated trainer, in respect of prize money won, at the end of each racing season (March to November). There are up to 35 other intelligently controlled computer trainers to compete against and compare your personal performance. To achieve this aim you must discover a potential champion and train them so that they become capable of competing well and winning any of the 47 big prize money races (Handicap and Group). eg. The Derby. To give you an idea of the tools provided in this game to assist you reaching your objective we have listed the main features below:-

- 250 horses each with over 60 independent variables.
- 26 different race courses (2 all weather), real life characteristics mirroring the diversity of racecourses in the UK (descriptions provided).
- Formbook and Win Summary Cards cover the previous 200 races.
- Animated race display or just the result. View Declaration List for races.
- 20 Jockeys who vary in ability and booking fees, Orders & Feedback.
- Very informative report by Head stable lad. Tipsters. Bookmakers.
- Racecards similar to racing press. Real life. Handicaps & Race Types.
- Injuries & Vets. Load/Save game. Many other items included.

## ORACLE RACING SYSTEM

**NEW REVOLUTIONARY HORSE TIPPING SOFTWARE YOU COULD HAVE WON**

**£46,518**

Winnings based on a maximum stake of £100.

During the period 01/01/93 to 31/12/93.

ONLY using the main meeting of the day.

245 Recommended Bets, 146 Wins, 62 Placed.

Statistics & details available upon request.

**Open National Tipping Competition :** Organised by Racecall, Tate regulated, this program achieved joint second. This led to a serious approach from a well known national book maker. Rejected in favour of supporting the public.

**Betting Formula :** This program tells you exactly what to do. You are NOT permitted to amend our system unlike so many other similar programs. How confident can you be in something that invites amendments!

**User Friendly :** No racing knowledge required, easy to use, full tutorial book plus full time technical support.

**Research & Development :** 3 years full time race analysis (ongoing) to refine and test the prediction system.

**Inside Knowledge :** Unique tips from contacts in the know eg. includes a list of horses expected to win next race.

**Monthly Updates :** Recommended optional extra and if it fails to break even we'll send the next one free of charge.

**Program Price :** £99.95 Buy now before success forces increase.

**Computers :** PC Compatible, Atari ST and Amiga.

**Latest Press Comment :**

## CRICKET MASTERS

This is a purely managerial cricket manager game that concentrates on strategy and includes plenty of relevant statistics. The game has been designed and developed by a true fan of the sport. It replicates everything that a real manager has to contend with and it's a totally unique production that all Cricket fans should experience.

A summary of the main features is shown below:-

- AXA EQUITY & LAW 18 league county teams, 50 overs per game.
- 4 Cup competitions including Benson & Hedges, Nat West.
- 20 different match umpires with accurate names and strictness.
- Accurate player details Surname, height and age.
- 27 different player attributes. Most skills have a direct impact on the effectiveness of each individuals actions during a simulated match.
- Easy player selection. All game text is clearly presented.
- Batting and bowling averages. Top batting and bowling tables.
- 3 Different training intensities to boost batting, bowling or fielding.
- Weather, pitch and light often make an impact on ground condition.
- Full match highlights let you watch the action ball by ball with full graphics and/or realistic sampled sound effects for significant events (Fours, Umpire decisions, etc.). Interventions are permitted at any time to change batting tactics or fielding placings.
- 3 Batting/Bowling classifications.
- 15 different field placings.
- Full scorecard results with best batting and bowling figures.
- Other staff (Physio, Groundkeeper, Scout) can be hired and fired.
- Annual league fixtures listing. Current week and last league results.
- View current cup competition draws and historic records.
- Real time transfer market. Player contract and wage negotiations.
- Sponsors, Finances, Poor ground fines, Manager rating.
- 15 Options to alter game prefs., Load & Save game, Printer access.
- Full instruction book with plenty of examples. Plus Many More.

## WORLD CUP CRICKET MASTERS

A fantastic graphical and/or tactical representation of Cricket that has been completely written by a traditional fan. You can physically participate with batting and/or bowling or leave it to the computer to automatically handle. See full feature list below :-

### PLAYER VARIETY

- Rated on 8 adjustable factors.
- Left and right handed players.
- Range of batting types.
- Editor to amend game stats.
- Bowler types include seam, swing, change and both types of spin with 8 speed levels.

### GAME OPTIONS

- 1 Day limited overs or test.
- White or coloured clothing.
- Three Cricket grounds.
- Load/Save game. Skill levels.
- Computer/Human players.

### FRIENDLY CONTROLS

- Icon driven with point & click.
- Large 3D scrolling screen covering the entire playing area.
- Mouse controls bowler's line, length, direction field settings.
- Joystick control of batsman's attack level, strokes and running between wickets.

### STATISTICS

- Scorecard & bowling analysis.
- Weather and ground reports
- Wagon Wheel
- Manhattan Chart.

### VARIABLE CONDITIONS

- Surface and pace of pitch
- Rain, bad light, cloud cover, temperature and humidity.

### ANIMATED ACTION

- Sound Commentary.
- Umpire signals.
- All the strokes cut, pull, drive, etc.
- Appeals, dropped catches, run outs.
- Bouncers, wides and no balls.

Concentrate. See nothing but the skittles. Imagine you are the skittles. And then throw the ball.

The mighty adventure hero, Boris, utters a phrase to instill fear into anyone that may oppose him. Well, maybe not.

**B**efore I start telling you about this one, let me make a couple of things clear. First of all, I really love point-and-click adventures (even after all this time, I still think that *Monkey Island 2* is the best Amiga game ever). Second, I always start out a game review thinking that everything has the potential to be good, with bad points dropping marks as we go on and good points recapturing lost percentages. Now with those two factors in mind I should like *Universe* – but I don't.

The game is a point-and-click

often wobbles about unconvincingly and things glitch horribly at times – not because of the programming – although this often shows holes, objects disappearing and stuff – but just because the animation hasn't been drawn properly.

The next problem rears its ugly head

metal bar into the panel. Whaaat!?! Later on you need to access a panel to open a door – or so I thought. It subsequently turns out that you have to attack the panel with the metal bar. Oh yes. It's so obvious isn't it.

This is typical of many of the problems in controlling the game. The reason being that there is a three-tiered control panel. Pressing the right mouse button calls up seven general commands which lead into eight additional options and finally the inventory. Included in this lot are 10 controls just for using items.

Nine of these can go for a start – you only need a Use command. Surely by now programmers should have sussed this out. Having to use the command Combine shows how convoluted the whole thing is.

A short way into the game and another taboo crops up – an arcade sequence. Sorry, no. An adventure game should be designed around lateral thinking solutions to clever problems, not simply resorting to a fly-along-

# UNIVERSE

adventure set around Boris (the hero) trying to make his way home to Earth from a surreal futuristic galaxy. Right from the first screen you can tell that the scenery is going to be wonderful, with some beautifully-drawn backdrops displaying the scenes. The music is fantastic too, ranging from dreamy soundscapes to powerful chase tracks.

All looking good so far – this one could still be a winner. Well now we find the problems...

First of all, you can't install the five-disk adventure to hard drive and you should be able to do that with any adventure worth its salt. This is made worse because it doesn't even recognise a second drive. Plenty of disk swaps in store!

I've already mentioned the smart backdrops, but the sprites and animations are very ropy. Boris quite

The trains are running here, so it can't be a Wednesday. Platform access is a bit lacking, though.

when you start to play. You see Boris doesn't respond too well to the most basic of controls – walking. Click where you want him to go and he'll more often than not walk straight into an obstacle and just stop. Great.

The first puzzle involves a timed jump (I kid you not) on to an asteroid then a walkway. That's bad enough, but the next puzzle is worse. You want to access a control panel, so you (get this) insert a

and-shoot section when things get boring. And they do. Oh they do.

Weighing everything up, the balance tips in favour of the down sides. There are a few uppers, such as lovely backgrounds, occasional superb character graphics and the brilliant music, but a thin plot, poor puzzles and an appalling control system are just the tip of the 'setback iceberg' that dogs *Universe's* every playing moment.

Maff Evans

Boris checks a sign which reads "Boris... You're going to die horribly. Ha ha ha haaaal!".

The microcosmic form of this space world draws a direct comparison with the stifled atmosphere of inner city life.

## UNIVERSE

# CD32 GAMES

What's shiny, smooth, spins round and round and provides hours of fun? It could be AF designer Frank Bartucca's head, but Steve Bradley reviewed the new CD<sup>32</sup> releases instead...

**T**here are a few things in life more satisfying than the vertically-scrolling top-down shoot-em-up, but I can't think of any at the moment. So **Banshee** (Core Design, 0332 297797, £29.99) it is then. This game's hero has one of the finest names around – Sven Svardensvart, and it is he who must save the world from the equally exceptionally-monikered Blardax Maldrear, using only a bi-plane which emits a most pleasant drone.

But these details are trifling. **Banshee** is simply about blowing things away over four massive levels and tackling the odd horrible boss. The graphics are as pretty as a picture – there are some very sweet rotating ray-traced enemies – but you're so busy shooting folk you don't get a great deal of time to admire the surroundings, although the excellent two-player mode offers a little more respite. **Banshee** is one of the loveliest and most playable shoot-em-ups around.

I'm going out on a limb here but I reckon there's a fair chance that Pierre Le Chef (who happens to be **Out To Lunch**, Mindscape, 0444 246333, £25.99) is meant to be French. Sigh, you can't beat a bit of cultural stereotyping to set the scene for a game. Jumping across platforms and collecting things over 48 levels is the order of the day (on the menu, blah, blah, poor cookery

jokes etc) and more than competent fare it is too. Pierre chases ingredients across six countries while avoiding the attentions of arch-rival Le Chef Noir (the Cook In Black, or the Cook Of The Night, or something like that).

Graphically, it's a full fried breakfast; the parallax scrolling is a fondant fancy (*stop making a meal of this review – Ed*) yet in parts, **Out To Lunch** is tougher going than undercooked sprouts – lose a couple of lives here and there and you find yourself back at the start. But overall, it's pretty, and it's fun. And that's what counts.

**Emerald Mines** (Almathera, 081-687 0040, £14.95) is a huge collection of ageing *Pacman*-esque puzzle games and you either like this sort of thing or you don't. It's certainly exhausting though hardly inspiring stuff for a 32-bit machine. Still it's only 15 sovs. 

**BANSHEE:** A very large, very mean and exceedingly orange bad thing takes some beating. Extinguish cigarettes, fasten seat belts and take a swig of the Duty Free.

## LOOKING GOOD FOR A DEVIL OF A GAME

**LITAL DIVIL:** The quality of the animations and background sprites sets Gremlin's soon-to-be-released *Lital Divil* apart from the rest.

Gremlin are well known for their consistent output of high-quality game software for the Amiga family of computers, including CD<sup>32</sup>.

Their latest release, *Lital Divil* (Gremlin Graphics 0742 753423, price to be announced) has been three years in the making. It's basically a dungeon romp with a difference. The difference being the exceptionally high quality of the animation and the background graphics. *Lital Divil* himself wouldn't look out of place in a 50s episode of *Tom And Jerry*.

You guide him round a series of dungeon corridors and check out all of the rooms. Most rooms set either dextrous or intellectual puzzles for *Lital Divil* to solve. Several of them look like *Dragon's Lair*, but they are more interactive. Our grabbing system doesn't really do justice to the game's beautifully-crafted background graphics – they have to be seen to be believed. *Lital Divil* should be ready for your delectation in November.

**OUT TO LUNCH:** This tasty platformer is a feast of French fun and frolics. And it's responsible for more crap puns than any other game in this issue. Hurrah!

# RE-RELEASES

Steve McGill takes a look at the latest crop of re-releases and decides whether they are old classics or just plain clapped out.

**T**his month witnesses a veritable cornucopia of re-releases. Many of them have been repackaged and compiled, six games at a time, within Pandora-like boxes, each sporting a *Hits For Six* title and a Prism Leisure logo.

The first of these boxes – **Special Forces** (Prism Leisure 081-804 8100, £24.99) includes the following titles: **Special Forces**, **3D World Boxing**, **Windsurf Willy**, **Millemiglia**, **Nebulus** and **Blade Warrior**.

**Blade Warrior** (AF27 78%) is a hack-and-slash RPG-style arcade game. It's basically a collect-em-up with lots of mindless sword-play thrown in to maintain some semblance of interest. Silhouetted graphics add some stylised atmosphere, but not enough to save the gameplayer from linear hell.

**3D World Boxing** (pre Amiga Format) scores a masochistic knock-out

from the word go. Before you can play

60%

**SPECIAL FORCES:** This should sell quite well because of the title game (below). *Nebulus* (left) and *Blade Warrior* (right) hark back to an earlier Amiga era which may interest enough gamers with a historical perspective to buy the pack.

**SPECIAL FORCES:** *3D World Boxing* (right) looks pretty. The control system beggars belief though. *Windsurf Willy* (left) is one of the first forays into game publishing for Silmarils. It mildly entertained, hinting at better things to come.

it you've got to flick through a tedious copy protection screen – in terms of gameplay though, the copy protection is the best part of this feeble offering. The graphics are lush, but the animation leaves a lot to be desired and the playability dies the death of a thousand

frustrated joystick waggles. Moves and punches, such as uppercuts and jabs, are completely unresponsive to the joystick. Consequently, if you're playing against the Amiga you're almost guaranteed to be beaten to a pulp. Extremely poor fare.

Next up is *Millemiglia* (AF37 51%). We can't actually tell you anything about this game – frustratingly. For some reason the copy protection sheet that the game refers to doesn't make an appearance at all. Apparently, this has been corrected and you race pre-war cars which handle like whales and break apart like dry twigs. It all gets boring very quickly.

## A strange affair

*Nebulus* (pre-Amiga Format) is a strange platform affair set around a tower. You are a queer-looking frog-thing and your aim is to reach the top of the tower in order to get to the next level. For hardened arcade freaks only – ex-editor Marcus Dyson reckons this is a classic.

*Windsurf Willy* (also pre-Amiga Format) is one of the first forays into the world of game writing for Silmarils. Unfortunately, it's not very entertaining. The aim of the game is

to become the fastest windsurfer around. You'll find yourself getting bored of it very quickly.

The eponymous game of the piece is *Special Forces* (AF35 79%). Imagine a more complicated and in-depth *Cannon Fodder* – only not as good – and you've just about sussed the gameplay. It failed to become a classic game due to several inexcusable foibles, such as the ease with which you can get totally lost. Still, it stands head and shoulders above any of the other offerings in this poor man's compilation.

Another box set is called **Corkers Compilation**: (Core Design 0332 297797). Four titles grace this collection on Core's Corkers budget label. They are, in no particular order:

**Wonder Dog** (AF54 74%). A cutesy console-style platformer. The gameplay is the standard fare of collect whatever's worth collecting while avoiding or killing the baddies. Reach the end of each level safely and you'll finally complete the game. It's solid, rather than outstanding, gameplay.

**Blastar** (AF53 44%) Beautiful graphics complement outstandingly

Continued overleaf →

74%

**CORKERS COMPILATION:** Core have been responsible for some of the best-looking games on the market. It's just a pity that the gameplay isn't always up to scratch.

**KGB:** Bushy eyebrows were a prerequisite for any senior position in the Russian Secret Service. That and a stern stare would usually get you a job.

poor gameplay in this below average shoot-em-up. Core and everyone else on the planet expected more than a sub-standard version of *Xenon 2*. But that's exactly what the gameplaying public got. Shame that.

**Cyberpunks** (AF54 74%) is a search-em-out, blast-em-up spaceship romp. Three cute little cartoon men have to search out useful objects, such as door passes and weapon power-ups, while exploring a humungously large ship full of deadly aliens. Control is easy enough to pick up straight away, but there's not enough here to keep your interest engaged for very long.

### Last, but not least

The last and best game of this compilation is **Blob** (AF51 83%). You control a blob who is so cute he should be made illegal. The gameplay takes you in, out, up, down, left, right, and anywhere else that's available on the screen as you bounce between platforms. This is classic platform fare with just about the perfect blend of playability and addiction to make it insomnia inducing – it features all the other

symptoms that usually accompany winning games.

Next up is **Supremacy** (AF15 90%). Power trip egomaniacs and would-be autonomous autocrats will jump at the chance to purchase this ageless classic for the now meagre budgetary sum of £12.99.

*Supremacy* is an imperial management game set in the vastness of planetary space. Your aim is to bring peace to variable-sized solar systems through your superior fire-power. In order to obtain that fire-power, you're going to have to tax the natives of your planets and ensure their overall well being.

It all boils down to an economic balancing act to get domestic commercial infrastructure coinciding harmoniously with militaristic expansionism. Get the equation

**RAILROAD TYCOON COMPILATION:** Playing tennis on the Brighton to London line isn't to be recommended. The ball boys keep getting run over.

**SUPREMACY:** Indulge your megalomaniacal fantasies with *Supremacy*. Rule your subjects with an iron will and crush your enemies with an iron fist. Or something.

wrong either way and there's plenty of similar dictators out there who'll do to you what you're trying to do to them. Highly recommended.

### Russian roulette

**KGB** (AF42 91%) is yet another *Amiga Format Gold*. Be warned though, this is an adventure set in post-Gorbachev Moscow. As such, some of the content and dialogue between characters is harrowing, graphic and explicit.

The graphics are pretty standard fare nowadays, but at the time they were exceptional. The plot is engaging without being overbearing and there's a novel rewind function that lets you restart from a key point in the game.

At £14.99 it's slightly more expensive than *Supremacy*, but adventure fans in search of a meaty, gritty game shouldn't let that put them off. It's back to the compilations, with another Prism Leisure *Hits For Six* title – **Railroad Tycoon**. The lead title, **Railroad Tycoon** (AF22 92%) steams ahead of the other

games in the pack. Start the game with a modest investment and set up a railroad empire in any of the five continents spanning the globe. It's not all plain locomoting however. If you don't have a head for business or a bit of lateral thinking then you'll be derailed ignominiously and have to start all over again. Have your ticket ready.

**Football Manager World Cup Edition 1990** (not reviewed in AF) on the other hand is an embarrassment. *Football Manager* attracted people when it was a new program on the ZX Spectrum, because nothing had been seen like it before. Unfortunately, it never seems to have evolved into anything other than a simplistic pile of crap

that evokes sentimentality from the gamer. It's worth no more than five minutes and an unsympathetic sigh.

**International Tennis** (AF45 82%) is a saveable, if not overly simplistic, tennis sim. There's a reasonable amount of fun to be had here if you're playing against a friend. A surprising amount of skill is required to master this, although you'll probably beat the Amiga on your first game.

**Netherworld** (not reviewed in AF) is a four-way shoot-em-up from the king of the 8-bits – Hewson. It shows its age badly in the graphics department but it still plays reasonably well. You have to collect diamonds against a time limit and er, that's it.

### Rough and tumble

**Targhan 2** (not reviewed in AF) is a not quite run of the mill hack-and-slash-em-up in the style of *Barbarian 2*. The background doesn't scroll, rather it flips in a tile-like manner. This may interest younger gamers. Everyone else will laugh at it. You have been warned.

And finally, there's **Big Game Fishing** (not reviewed in AF). As far as we know this is the only big game fishing game on the market. If you buy this and find that you don't have the copy protection sheet, phone Prism Leisure. But judging by this effort, it's probably just as well. Exceptionally poor.

## MAKING THE MARKS ADD UP

Many of the games here have two marks – one in the text and one on the picture. The first is the mark the game received when it was originally reviewed in *Amiga Format*. The score on the picture is what we now think the game is worth, taking into account the re-release price, how it's aged and whether it's been superseded by a new generation of better or faster games.

# AMIGA

**NEW! CD<sup>32</sup> EXPANSION MODULE**  
& CD-ROM DRIVE FOR A600/1200  
FROM SILICA - THE UK's No1 AMIGA SPECIALISTS

**FREE! FROM SILICA**

When you buy your Amiga computer from Silica, at our advertised prices, we will give you one or more free gifts. The gifts include the new Chaos pack, enhanced AGA version for A1200 and A4000, GFA Basic & Photon Paint II. Check this ad to see which gifts come with each Amiga from Silica.

## SOFTWARE PACK

CHAOS ENGINE ..... £25.99  
SYNDICATE ..... £34.99

## AMIGA 4000 SPECIFICATIONS

1 YEAR ON SITE/AT HOME WARRANTY ON ALL CONFIGURATIONS

**FREE DELIVERY IN UK MAINLAND**

The A4000 030EC runs at least 9 times faster than the speed of the A600.

**GRAPHICS:**

- 16.7 MILLION COLOURS
- RESOLUTIONS UP TO 1280x1024 AND 800x600

**OPEN ARCHITECTURE:**  
The A4000 has been designed for maximum flexibility providing plenty of room for memory & peripheral expansion.

• 4x16-bit ZORRO III SLOTS  
• 3xPC-AT SLOTS  
• 1x24-bit VIDEO SLOT

**POWER:**  
• 1.7W 31" FLOPPY DRIVE

## AMIGA 4000 CONFIGURATIONS

The Amiga 4000 030EC is available in a 4Mb RAM, 214Mb Hard Drive version from Silica (please see below). It is fully configured and approved and carries Commodore's full one year on-site warranty. RAM upgrades are also available from Silica. Due to current fluctuations in the market, please call for upgrade prices.

**FREE SOFTWARE INCLUDED**

Deluxe Paint IV AGA ... WORTH £99.99

WordWorth V2 AGA ... WORTH £129.99

DIGITA Print Manager for WordWorth ... WORTH £39.99

TOTAL VALUE: £269.97

**25MHz 68030EC DESKTOP**

**4Mb RAM 214Mb HARD DRIVE**

**£999**

INCLUDING VAT - AMB 3215

**RAM UPGRADES CALL FOR PRICES**

**APPROVED**

Silica are a fully authorised Amiga dealer. We can upgrade Amiga 600 or 1200's with hard drives, for new or existing owners, without affecting Commodore's official on-site warranty. We offer other upgrades and repair service for A500 and A500plus computers.

**UPGRADES & REPAIRS**

• Latest test equipment

• 20 trained technicians

• 1,000s of parts in stock

• FAST, 48 hour service

• We can collect (£5+VAT)

• FREE return courier

• All work guaranteed

## CHAMPIONSHIP MANAGER 93-94

Reviewed AF48 82% ■ Domark 081-780 2222

Here are a whole terrace-full of codes and tips for the footie management sim, *Championship Manager 93-94*.

One of the most important parts of the game is the protection code. The result that you are asked to key in seems to determine all the major factors of the game, such as the stats of the players, the teams that want to buy them and their injuries. It also determines the names and promise of the reserve players.

The best protection code results usually contain a bagful of goals but if you get a result that you are fed up with, don't think that purposely typing it in wrongly and getting the next result right does any good because you get the same set-up. Instead just reload the program.

### NICE ONE

On one of the results, Claus Christiansen, the Danish right back on the foreign players list has the best stats ever. They are: 15 Passing; 18 Tackling; 20 Pace; 20 Heading; 16 Flair; 20 Creativity; 20 Stamina; 20 Influence

TOTTENHAM		IPSWICH	
01	1. WALKER	01	C. FORREST
02	2. J. BODENBURGH	02	N. THOMPSON
03	3. M. SPURRY	03	0. J. MURPHY

28	28. G. WILKINSON	28	0. P. GUNTER
29	29. G. WILKINSON	29	0. P. GUNTER
30	30. G. WILKINSON	30	0. P. GUNTER

By the break the Ipswich pressure has paid off. They'll enjoy their half-time cup of tea all the more with that 3-0 cushion.

The next important thing is to pick a winning team, they need quite a few empty spaces to fill with new players, a healthy bank account with a good weekly turnover, budding youth players and experienced players who are not wilting as much as those around them. Here are a few of the better teams in each of the divisions:

Division	Team
Premier	Newcastle United
Premier	Leeds United
Premier	Chelsea
Div. 1	Portsmouth
Div. 1	Derby County
Div. 2	Port Vale
Div. 2	Brentford
Div. 2	Luton Town
Div. 3	Cambridge United
Div. 3	Crewe
Div. 3	Leyton Orient

The best of these by far is Port Vale where I have managed to gain promotion to the Premier Division in only two seasons. Also, I have had a top average rating in the Second Division by Martin Foyle of Port Vale of 8.36.

Set your formation as follows 1, 3, 3, 1, 2 Goalkeeper, Right Back (normal), Left Back (normal), Sweeper, Centre Back (normal), Centre Mid (back), 2 Centre Mid (normal), Support, Centre Att (normal), Centre Att (forward).

The Sweeper needs to be fast with good ball-winning skills. The Centre Mid (going back) needs good passing, tackling and stamina. The Support man needs to be someone who can play Centre Mid or Att, needs good passing, flair and creativity. The Normal Att needs to be unselfish or responsible and needs passing, flair and creativity. The Att going forward needs to have pace, flair and stamina. Another important section

After 12 minutes Spurs and Ipswich are locked at 0-0. But this looks like a confident penalty appeal by Ipswich.

is the buying of players. I have again come up with a hotlist of the best players to buy and in what division to buy them (see the table below).

Getting the player a good contract is also important. Occasionally the best players in the Premier League get snatched up by foreign clubs. To stop this happening, make sure their contracts don't expire between the age of 25 and 28.

If they don't accept a contract that expires during that time, don't worry, if you leave them without a contract for a week they tend to change their mind about how long they want a contract for. Buy British players if you can because, if they reach their national squads, their value goes up and they become more confident. Never keep a player whose personality is withdrawn and has influence below 5, he won't benefit the team. A good captain has influence of 15+ and a responsible, confident or thoughtful personality.

### MARSEILLE NIL

Here's a useful cheat. Before the end of each season, insure the players in your squad who are 30 years old or over, then transfer list them for as much as you can and make sure they don't have a shirt number – even a substitute's one.

Come the new season you'll find your account nicely increased and one extra space in your squad because the player has retired into non-league soccer. Don't do this if the player features in your next season's plans and be careful – they may retire when you don't expect it! Once I even managed to increase my money by £9,000,000 when retiring Gary McAllister at Leeds United.

If players are unhappy, list them. As soon as anyone is after them, take them from the list, then list them again. This makes the teams not want to buy them. If you do this for a while, the player decides no-one wants him and stays at the club.

Michael Stubbs, Staffordshire

Each month, the sender of the best Gamebusters players' guide is entitled to a £25 Amiga Format Mail Order voucher or a Gremlin game of their choice.

DIVISION	PLAYER	TEAM	BEST SEASON
1/2	Dele Adebola	Crewe	4, 5, 6, 7
Prem/1	Tommy Johnson	Derby	3, 4
1/2/3	Claus Christiansen	Denmark	4, 5, 6

# TACTICAL MANAGER

If the boys don't perform on the day, it could mean a long walk from the dug-out to the Job Centre. Unless, of course, you've got these handy *Tactical Manager* cheats...

Reviewed AF60 78% ■ Black Legend 0438 840034

**H**ere are the extra codes that the manual to *Tactical Manager* doesn't give, and also a few other cheats. The first ones are activated by typing CODE on the main screen (it makes it easier if you pause the game), and then typing:

**CONT** – Randomises all contract lengths.

**BIDS** – Erases all bids from memory.

**LIMI** – Disables the limit of 110 applied to the overall team rating, allowing you to acquire and play all the best players by typing....

**FREE** – Enables managers to buy all your players free of charge.

**POOL** – Saves the European pool to disk.

**VIEW** – Shows something to do with the memory, no use to mere mortals like us, only those clever programmer types.

**PROM** – Shows all of last season's promotions and relegations.

**MEMO** – Displays the amount of free memory.

These last couple are activated by typing them in on the main screen WITHOUT first typing CODE. Simply type:

**EDIT** – Gains access to the full editor.

**W** – Enables you to manage any team, but make sure you have already typed EDIT to get the full editor because W doesn't work on its own.

Once you have typed in W, a small green and yellow strip should appear just along from the LOGO and AUTO icon things, under the second

*Tactical Manager* is a game of footballing skill, team strategy and judgement. But it always helps if you cheat as well.

logo space. You can now go to the Manager's menu and JOIN any club. Your rating automatically jumps to that of the new team, unless you are joining a lesser club.

Finally, if you want to alter teams because of transfers among Premiership and Division 1 teams, to maintain more accurate club records, instead of creating a whole new player in the editor, it is best to make yourself the manager of the club who bought the player, enable FREE transfers, and transfer the player that way. This means the player keeps his original ID number.

For example, Paul Furlong was bought by Chelsea from Watford, so to enable this change, simply become Chelsea manager, enable FREE transfers, and approach Watford.

## GRAHAM GOOCH'S WORLD CLASS CRICKET

You can cheat at *Graham Gooch's World Class Cricket* without putting your hands in your pocket.

Reviewed AF47 78% ■ Audiogenic 081-424 2244

Here are a few tips to help you with Audiogenic's cricket game.

When bowling, select a fast bowler and go to the fielder set-up screen. Go to Keeper-Slip and put the Keeper up behind the wicket and move him slightly to the left (or to the right for a left-handed batsman). Make sure he is right up against the stumps then lightly touch the joystick back two or three times.

Exit the fielder set-up and bowl with the bowling square on the crease line. Bowl at any speed and with luck the batsman gets an inside edge and is caught by the Keeper. If the ball goes through the Keeper, place a Slip and Third Man behind him.

When batting, press P to pause the game before the bowler moves his square. When you unpause the game the bowler bowls to the position the square was in, giving you either an easy hit or a wide.

If you hit the Esc key, the fielders are paused, but you can continue running. After the scoreboard reaches 9 the letters of the alphabet appear on the board, but your score continues to increase.

## FRANKLY, CANNON FODDER

I am stuck on Mission 19 of Cannon Fodder. Whenever I try to put my men on the circle pads to get the chopper they all get horribly killed and make a foul, red mess.

**Paul Roberts, Brighton**

Three men are required to complete this mission – if any get killed, press the Escape key and have another go. Head up to the building at the top and position the troops to the right side. Split two men off and head to the pile of junk at the right. You'll come under fire from a jeep so you must run towards the junk, chuck a grenade over the other side and run like Linford Christie. And his mates.

Head the two chaps to the wall on the right while avoiding the chopper fire – it will get bored after a while and land. Hug the right of the screen and avoid the turret, rocket the chopper then go back to the wall and stand on the white pad in front of the door.

Switch to the rest of the blokes, split one off and leave him on the other white pad, then go to the other pad near the wall at the bottom left of the screen via the building in the middle. Again, you have to avoid fire from the turrets, but when you stand on the final pad it glows red and the helicopter flies over to you. Jump in and blow the gaff to smithereens.

Thanks to Amiga Power's Cam Winstanley for the pugnacious pointers. For details of Cam's complete Cannon Fodder book, turn to page 78.

## HOOKED OFF

I've recently bought Hook and I cannot get the pants or the clock, only three gold pieces.

**Fintan Maher, Dublin**

At the pub, if you give the barmen the three mugs and three gold pieces, he gives you three mugs of cocoa. Give them to the pirate in the blue cap and when he falls asleep, pick up his trousers and leave. Walk behind Pirate Square and use the

If you want to stop your sprites meeting a terrible end in Cannon Fodder, check out our expert advice.

roller blind – Pan then changes into a pirate outfit. Head for Good Form Pier and board Hook's ship and take nine pieces of gold from the three pots against the wall. Leave the ship and head for the tailor's and ask for a metal detector before departing for Good Form Beach. If you use the detector on the cross in the sand. A clock appears.

## CON-CRETE SOLUTION

I have had Indiana Jones And The Fate Of Atlantis for a while now and I'm stuck in Crete. I've found the bull's head and tail and the tall horns but I can't work out what to do next.

**Jack Woods, Ipswich**

OK, here goes. Near the bull's horns statue there are two piles of stones, push each one to reveal two statues. Use the surveyor's instrument on the bull's head statue, use transit-on-statue and line up the crosshair with the left horn. Indy should then say: "I see the left horn." If you put the surveyor's instrument on the bull's tail statue and line up with the right horn, Indy says: "I see the right horn" and an 'X-marks-the-spot' appears. Use the ship rib on the X. Now leave the dig site and walk to the right and use the sunstone on the stone pedestal and... oh, I won't spoil the rest for you.

## SEND US YOUR STUFF

Major credit cards accepted

**G**reat graphics never made a game great. It takes great gameplay to do that. But crap graphics sure did spoil the chances of one or two otherwise respectable efforts.

Surely it's a doddle to get great graphics? Just take a talented artist, lock them in a room for two months with an Amiga 4000/040, an Epson GT-8000 scanner, a pressure-sensitive digitising tablet, a Harlequin 24-bit card, copies of *TV Paint* and *Art Department Professional* and stick trays of cola and chocolate under the door at regular intervals. Et voila! Great art.

Although famous artist Rico Holmes works in a way similar to the one described above for his title screens, the technical requirements of how a game is programmed mean that in-game graphics demand a very different approach. In fact it's possible to make top-quality game graphics on a basic Amiga 600 with a copy of *DPaint 4 AGA* or *DPaint 3*, (or even 2).

### Sprites and bobs

If an element of a game's graphics moves, it has to be programmed to do so. This includes either movement in terms of motion, like the aeroplane in *Banshee*, or movement in terms of frames of animation in a fixed position on screen, like a collapsing wall in *Tower Assault* (the soon-to-be-released follow-up to *Alien Breed 2*).

Programmers have two options for creating these motions – they can use either sprites or bobs. Although game reviewers often talk about the main sprite or the end-of-level sprite, these objects are often not sprites at all, but bobs.

Sprites are made by setting aside an area of Chip memory, and creating a sprite register in that bit of

# The Art of GAME GRAPHICS

**Drawing pictures for Amiga games is not as easy as you might think! This is an area where artistic ambition has to compromise itself to technical capability. Marcus Dyson gives all aspiring Amiga game artists a few tips.**

Due to the technical restrictions on the size of games graphics, most work is done at very high magnifications.

memory. To animate the sprite, move the pointer ins memory which tells the computer where to find the data. This process only takes up a little processor time and no shunting about of data, so sprites can be moved quickly, and updated frequently giving an illusion of smooth-scrolling and animation.

The number of sprites that can be displayed is limited, as are the size and number of colours of each sprite, by the way sprite data is stored and retrieved. An Amiga 1200 can display up to eight sprites.

Programmer Stefan Boberg explains why: "Each scan line contains data for the sprites at the start of the line, but there are only eight cycles where the machine can go and get the sprite data, so you can have eight sprites on any one scan line. But this is reduced if you wish to expand the screen using overscan. If you widen the screen by 32 pixels on the left side, you can only have six sprites."

Each sprite can be up to 64 pixels wide and as many pixels tall as you wish, but is only displayed in four colours. Programmers can place two sprites at the same point on screen, which doubles the amount of bitplanes available and results in a 16-colour sprite.

Images like these, from Rico Holmes, are stunning, but they can only be used as title screens. Rico works in 24-bit, making use of devices such as scanners and digitising tablets to achieve this impressive level of detail. But the resolution and amount of colours mean that an Amiga 1200 could not animate pictures such as these.

Bobs are Blitter OBjects, and they are created by placing data in the registers of the Blitter (Block Image TransFER) Chip. Bobs are not limited in terms of colour or size. But because a bigger bob, or one with more colours, requires more data to be transferred to the Blitter, there is an overhead in terms of processor time. Since the screen has to wait for the Blitter before it can re-draw, using too many bobs slows down the frame rate of the game.

It is important for artists to be aware of these technical limitations before they begin to create the graphics for a game.

### Palette control

More colours means more work for the computer to do, and that, in turn, means slower games. So it is advisable to produce a game in as

few colours as possible. To do this the artist has to be very skilled in the choice of palette colours. Too many colours and the gameplay suffers, too few and the graphics suffer.

Although the Amiga 1200 can display up to 256 colours at a time without resorting to trick techniques like HAM mode, the 68020 processor is not sufficiently fast to allow most games to use all of these colours. It can, however, handle 64 colours with ease, and this is the size of the palette of most A1200 games.

Picking which 64 colours to use is one of the great skills of computer graphic art. Stefan explains: "On the ECS (Enhanced Chip Set), the sprite colours start at colour 16. If you double the sprite, you must use the second 16 colours in the palette."

Tony Turunen, artist on *Tower Assault* continues: "You are also

All the graphics for a level of *Tower Assault* are here on this one bitmap. The completed level will be many screens high and wide.

There is no quick way to learn how to create images like this one from *Super Stardust*. It takes hard work, skill and an awful lot of practice.

Game levels are constructed in custom-written programs called Map Editors. These programs are basically highly-specialised paint packages. Beneath the level that is being built up, another level is created which tells the game program about the properties of each individual square of screen.

going to need a grey scale, you can use that to create tones of other colours by dithering. Look at the work of Dan Malone who did *Chaos Engine*. He is the king by the way!"

### Pixel level

Once our artist has selected their very limited palette, they face the other limitation of computer games graphics, resolution. The best way to make an image look sharp and realistic is to render it at the highest resolution the machine will allow.

Amiga games are usually done at a 320 by 256 screen size, and as we've already explained, the size of sprites and bobs are constrained by the technical limits of the machine. Games artists must quickly become adept at making every pixel count, and if one watches Tony in action, you will virtually always find his

copy of *DPaint* set in magnify mode. This way of working may be unfamiliar to many computer artists, but when you are trying to convey the appearance of an object in a space 16 or 32 pixels wide it soon becomes second nature.

Often what is visible on the main window of Tony's screen appears like random dots, but the left hand side of the screen shows the image at normal size, so it's possible to edit at pixel level while retaining an idea of what the result will look like.

### Mapping the levels

The levels of some games, most notably shoot-em-ups and platform games, can be huge. Levels of 20, 30, even 50 screens are quite common, and to make up the backgrounds for all that game area requires what seems like a huge

## ANIMATION MATTERS

As if drawing recognisable images at such small scale is not difficult enough, a successful graphic artist is also called upon to animate them. This is another skill that is vital to a games artist.

Just using *DPaint*'s rotate function is sometimes enough – for instance when a top-down view of a spaceship or vehicle is required – but more often than not, animating a sprite means drawing it over and over again in various positions.

With just a few pixels to define your character, you have to maintain its scale and proportions while you draw it in a host of different positions, orientations and (occasionally) sizes. There are no short cuts to becoming a good graphic artist, the secret of success is hard work and practice.

Good animation is vital to the look of an attractive game. Even if the coding is fast, and the scrolling smooth, if a sprite has too few frames of animation the result will look poor. If there are too many frames, the machine cannot display them all fast enough. Again it is important that programmer and artist communicate effectively to assure the best results.

Background animation and sprite movement can make a game look far more impressive. These frames show a sprite being created in *Tower Assault*.

amount of graphics. But this is not how things are done. Programs don't actually store the backgrounds as huge bitmaps. If a game has 81,920 pixels on screen (320 by 256) and each pixel requires six bits of data (64-colour graphics), then each screen would require 61K of memory. A level of 14 screen's size would take up a whole floppy disk.

Instead a table of codes is used which tells the program to go to a clip file and select a block of that image to draw on the screen – a bit like a mosaic. The data for a whole level of a game background can be stored on a bitmap image of between two and four screens in size. So all the graphics of one world of a platform game take up around 200K.

In order to create this mosaic the people who design the game levels use a program called a Map Editor. Most games developers write their own Map Editors, but they usually work in a fairly similar fashion. The artists arrange their data in blocks of pixels. These blocks are usually 16x16 pixels in size, but some Map Editors use 8x8 blocks.

The advantage of smaller blocks is that level designers can use more combinations of blocks, and the resultant scene is therefore less

repetitive. The disadvantage of smaller blocks is that four times as many blocks have to be placed to create the same sized level.

The Map Editor program doesn't just offer a nice way of making big levels from a small amount of graphics, the code matrices that are created also convey important data to the program. The codes which tell the program which bit of the clip file to use for the graphics can also control what happens when sprites move to that part of the screen.

### Hidden trap

The codes control whether the sprite can pass through that area of the screen, or whether colliding with it results in an explosion, loss of a life, or whether the player just bounces off. The Map Editor codes tell the program if that square contains a pick-up or a hidden trap.

The skill of being a good background artist, and these are not always the same people who make the best sprite artists, is being able to create blocks that can be used again and again in a scene without it being obvious that they have been.

The blocks have to be like the pieces of a jigsaw in that the picture on them has to fit seamlessly next to the picture on the adjacent block. But unlike a jigsaw piece, every graphics block has to be able to be used in conjunction with any other one to create a picture. Levels are usually designed by someone other than the graphic artist, so all an aspiring artist really needs to know is what size blocks to create.

Now you know how three screens of 16-pixel-square graphics can become the awesome games you see on your Amiga. To find out how this information could really change your life, turn the page.

Artists such as Tony Turunen use *DPaint* to create their graphics. The game here is Team 17's *Alien Breed*.

# WIN A JOB AT TEAM 17!

Enter our competition and you could end up working as a game designer for one of the UK's top software houses.

The pictures on this page are from forthcoming Team 17 games. They are: *Super Stardust* (main pic) *Super Frog* (top right), *All Terrain Racing* (far right) and *Tower Assault* (below).

Send in your entries on a floppy disk with your name and address clearly marked on the label – do you realise how difficult it is to keep hundreds of unidentified disks together with the correct letter during judging?

Then all you have to do is wait for that phone call which begins: "Ee up lad, does tha' fancy moving up North?"

**Marcus Dyson, Team 17**

\*Money paid in monthly lumps, subject to PAYE and National Insurance.

## CONDITIONS

- Entries must be the original work of the named entrant.
- Employees of Future Publishing are welcome to enter, as are employees of Team 17, but that would be a bit pointless because we won't let you win.
- The successful entrant must be willing and able to take a full-time position with Team 17 Software Limited (working either from their own home, or preferably from our luxuriously appointed offices in the posh bit of Wakefield), should the pay offer meet with their approval.

**T**he pictures scattered about this page are some of the graphics from Team 17's forthcoming games. Think you can do better? If so, you could win a life sentence at Britain's most Amiga-friendly software house, and lots of money too.\*

When I was the editor of *Amiga Format*, I was constantly amazed at the sheer quality of the graphics that we received as entries for The Gallery. I know that *Amiga Format*

readers are a talented bunch, but some of the pictures we were sent were so good that software houses used to ring us up and ask to be put in touch with the artists who created them.

Now I am working for Team 17, and we are constantly on the lookout for talented artists. Then it occurred to us, why not draw on the biggest assembly of Amiga talent in the world, the readers of *Amiga Format*? So what we're offering is the chance of a job – an opportunity to sit at your Amiga all day using your favourite paint package, and get paid for it too.

OK, so we're not about to reveal how much we pay our graphic

artists in the pages of *Amiga Format*, because it would only make the employees of other software developers feel hard-done-by. But you'll earn enough to keep you in a steady supply of beer and pizzas. Even if you happen to be an alcoholic pizza-addict.

## What you need to do

And all you have to do to enter our competition is draw some fabulous games graphics. Remember what you've learnt from the games graphics feature on the previous two pages – we don't want any sprites that are 65 pixels wide, and no level designs with 6,000,000 bobs on every screen.

**TEAM 17**

**Send your entries to:

# QUALITY PERIPHERALS FOR THE AMIGA

## HAWK RAM UPGRADE & MATHS ACCELERATOR FOR THE AMIGA 1200

Maximise the processing power of your standard A1200. Be ready for the new generation of software which makes more demands on Amiga memory and technology. The AmiTek Hawk RAM expansion includes up to 8Mb fast 32-bit RAM, the ability to support a sophisticated 68882 FPU (Floating Point Unit - drastically increases the speed of maths intensive operations) and a battery backed up clock. Built to a high standard, this board can be easily installed and comes with a 2 year warranty. The Hawk RAM board is available in 9 pre-configured versions enabling you to select the model which best suits your requirements.

- Plugs straight into A1200 trapdoor - No soldering required
- Upgradeable FAST RAM board to 1, 2, 4 or 8Mb
- Uses industry standard socketed SIMMs for easy upgrades
- Two types of optional Floating Point Unit - 33MHz or 40MHz PLCC 68882 co-processor
- Comprehensive manual with illustrations
- Works with all A1200 and A1200HD computers
- Does not invalidate your A1200 warranty
- 2 year warranty

## 1Mb SONY 3 1/2" DELUXE FLOPPY DRIVE FOR ALL AMIGA COMPUTERS

### DELUXE FEATURES

The AmiTek drive has been specially designed to meet the needs of Amiga users and has many deluxe features which are not included in other drives - check out the competition!

### ANTI-CLICK

The anti-click feature stops your drive from making lengthy whirs and clicks that occur when the drive is empty and searching for a disk.

### ANTI-VIRUS

The switchable Anti-Virus mode stops track 0 viruses infecting the disk while in the drive. Yet, unlike many other drives which have virus killers, this Anti-Virus mode can be disabled, allowing some fussy copy protected software to run.

### ADD ADDITIONAL DRIVES

As a double sided mechanism, the AmiTek drive gives 880K of disk space after formatting. It is also daisy-chainable, which means that you may add further drives to your system and, uses very little power from your Amiga.

### HIGH QUALITY SONY MECHANISM

AmiTek took the time to source a mechanism that has all the features, quality and reliability that Amiga owners have been crying out for. After vigorously testing Sony's mechanism, it proved to be the best by far available.

Details taken from models available MARCH '94	ANTI-CLICK	ANTI-VIRUS	ROBUST STEEL CASE	QUALITY SONY MECHANISM	TOP RATED CU-AMIGA MAY '94 90%	2 YEAR WARRANTY

# AMIGA FORMAT PRESENTS

**"This range of videos has been designed to help you, the readers of Amiga Format, get the most out of your machine. I'm sure you'll find our expert tuition absolutely vital!"**  
Steve Jarratt, Editor, Amiga Format

From the people who bring you *Amiga Format* comes a series of specially-created videos, enabling you to get the most out of your Amiga. All videos are just **£14.99**, but you can **save £10** by buying **three titles for just £34.95!**

**SAVE  
£10.00**  
Buy any 3 videos for £34.95

## FIRST STEPS WITH PERSONAL PAINT

*Personal Paint* is the brilliant package from Cloanto that Commodore now bundle with the A1200. The AF video brings you expert advice on:

- Bitmap graphics.
- Brush operations.
- In-depth tutorials on stencils and image processing.
- File techniques.
- File formats and much more.

(AF0001)

## GUIDE TO A1200 HARD DRIVES

Buying a hard drive will open up a whole new world of Amiga use. We tell you how to:

- Choose a drive.
- Install a drive.
- Partition and format your disk.
- Install your Workbench disks and other software.
- Take care of your drive.
- Use useful disk utilities.

(AF0003)

## AN INTRODUCTION TO THE A1200

AF experts show you how to get the most out of this powerful, versatile home computer, by explaining:

- How to care for your Amiga.
- How to perform basic disk operations and care for your disks.
- All you need to know about icons, files, menus and drawers.
- How to set your preferences.
- How to install a monitor.

(AF0002)

## GET THE MOST OUT OF MUSIC-X

*Music-X* is one of the most powerful sequencer packages for the Amiga. We show you how to get in tune by:

- Explaining how to set preferences.
- Telling you how to get the most out of Amiga samples.
- Giving you in-depth tutorials.
- Guiding you through the world of MIDI equipment.

(AF0005)

## THE GUIDE TO UPGRADING YOUR MACHINE

As you begin to realise the amazing power and potential of your Amiga you'll want to make it even bigger and faster. We show you how to:

- Install the latest versions of Workbench and Kickstart.
- Add RAM to your Amiga.
- Install and get the most out of a Floating Point Unit.
- Buy add-ons and upgrades from mail order companies.
- Dismantle your machine.

## THE GUIDE TO MULTIMEDIA

One of the Amiga's greatest strengths is its ability to handle video and music to create multimedia presentations. We show you:

- The ways in which you can use multimedia presentations.
- How to choose the best package for your needs.
- How to create your own multimedia title.
- How to get to grips with the concepts of multimedia.

(AF0006)

## THE BEGINNER'S GUIDE TO DESKTOP VIDEO

Are you a budding Spielberg? Well, he uses the Amiga to create some of his astounding effects. Find out how to harness Amiga video power with:

- Our top tips for building a home video system based on your Amiga.
- Tutorials on how to create and title your own videos.
- Advice on how to choose and use a genlock and a chromakey.
- How to use fades and wipes.
- How to add music.

(AF0007)

## THE ADVANCED GUIDE TO DESKTOP VIDEO

If you've already got to grips with the basics of Amiga DTV, then expand your knowledge with our advanced course which includes in-depth advice on:

- How to choose and use advanced video hardware.
- Image processing and 24-bit graphics cards.
- How to use a digitiser.
- Learning professional video editing techniques.
- How to get the most out of different video formats.

(AF0008)

## GET THE MOST OUT OF CLARISSA

Say goodbye to jerky IFF sequences with the remarkable *ClariSSA* animation utility from the AF61 Coverdisk. Find out how to:

- Bring your art to life with the Super Smooth Animation facility.
- Use *ClariSSA*'s colour effects.
- Apply fade and other effects to your animations.
- Convert your animations.

(AF0009)

# SERIOUSLY AMIGA

This glowing plasma sphere was generated by *Lightwave* on an A4000 equipped with a Warp Engine. Find out how it was created over the page, and how fast the Warp can go on page 97.

**AMIGA**  
FORMAT

**WELCOME!**

Hurrah! The unbundled version of *Lightwave* has finally arrived, and as you can see from the picture on this page, I've been shirking my editorial responsibilities in order to play with it. We will have a full review of it and the PAR system it will be bundled with next month, but for now there's a tantalising preview.

Before you turn the page though, take a look at some of the other goodies we've got for you. The Warp Engine, from Macro System, is the perfect companion to *Lightwave*. It allows huge memory expansion, and super fast rendering times, but it is useful for any processor-heavy tasks.

A1200 owners can get in on the act too, with a useful round up of A1200 accelerator cards. As if this wasn't enough, we also have an exclusive review of the latest version of Workbench 3.1, which will be available for all Amigas. Have fun!

Nick Veitch

## REVIEWS

<b>Lightwave</b>	<b>92</b>
The most exciting software in the world will now be available without the Toaster. Nick Veitch serves up an appetiser for the delights to come.	
<b>Warp Engine</b>	<b>97</b>
John Kennedy boldly manages to get through a review of this fantastic accelerator without once mentioning Scotty or dilithium crystals.	
<b>A1200 Expansion Round-up</b>	<b>99</b>
Jason Holborn sorts through the vast array of accelerator, FPU and RAM cards currently available for the thrill-seeking A1200 owner.	
<b>Workbench 3.1</b>	<b>106</b>
At last, an operating system upgrade for users of all Amigas. Whatever model you own, you should read this exclusive review.	
<b>Communicator</b>	<b>111</b>
A continental solution to the familiar problem of trying to transfer data between the CD <sup>32</sup> and your Amiga.	
<b>Aceex 1414</b>	<b>113</b>
It's a modem, it's a fax machine, it's the new Aceex 1414 personal communications solution.	

# LIGHTWAVE

In the beginning there was darkness. Then some bright chaps in Texas came up with the idea of *Lightwave*. Nick Veitch takes a sneak preview of the unbundled version.

**T**he philosophy of rendering in *Lightwave* is a simple one. Its creators were a group of wannabee filmmakers. Realising that the chances of Paramount giving them a \$200 million budget to create a cinematic masterpiece were rather slim, they created a virtual world of their own.

*Lightwave* is probably the best known piece of Amiga software ever. In fact, in some circles it is known better than the Amiga itself. This success is not undeserved. From *Babylon5* to *Jurassic Park*, *SeaQuest* and *RoboCop3*, *Lightwave* has been used all over Hollywood for feasibility projects, storyboarding or actual motion picture-quality effects. The movie-like touches can be seen throughout the

## NEW THINGS

There are quite a few new things about *Lightwave 3.5*.

Firstly, now you can render in more than just the standard resolutions. Older versions based their five pre-determined resolutions on video frame sizes. These are still available and they range from 160x128 pixels up to a colossal 3008x1920 pixels, but they do not allow the configurability required for some applications.

OK, for animated sequences, which are to be dumped to video, there is no point in exceeding a standard Overscan PAL resolution, but there are plenty of times when you might want a resolution somewhere in between. So, the latest version also allows a customisable image size. Support has also been added for 24-bit Raw and Targa image formats.

In the modeller, there is a new subdivide option called *Metaform*, which creates more organic (ie blobby) subdivisions of an object.

An animation such as this takes a very respectable 30 seconds to set up in *Lightwave*, thanks to the motion control feature and intelligent frame tweening.

software. The wireframe layout screen draws in cameras and lights as they would appear in a real Hollywood backlot, and the camera settings range from a 110 instamatic to a 65mm motion picture camera.

In many ways, the Video Toaster, excellent as it is, just became a system requirement to use the *Lightwave* software, making it the most complicated dongle ever. The Toaster is a very useful system, but there are an awful lot of people who use the Toaster just to run *Lightwave*, people who have no need of *Toasterpaint*, digital video effects and titling software, people like Amblimation, and the award-winning creators of *Babylon5's* graphics, Foundation Imaging.

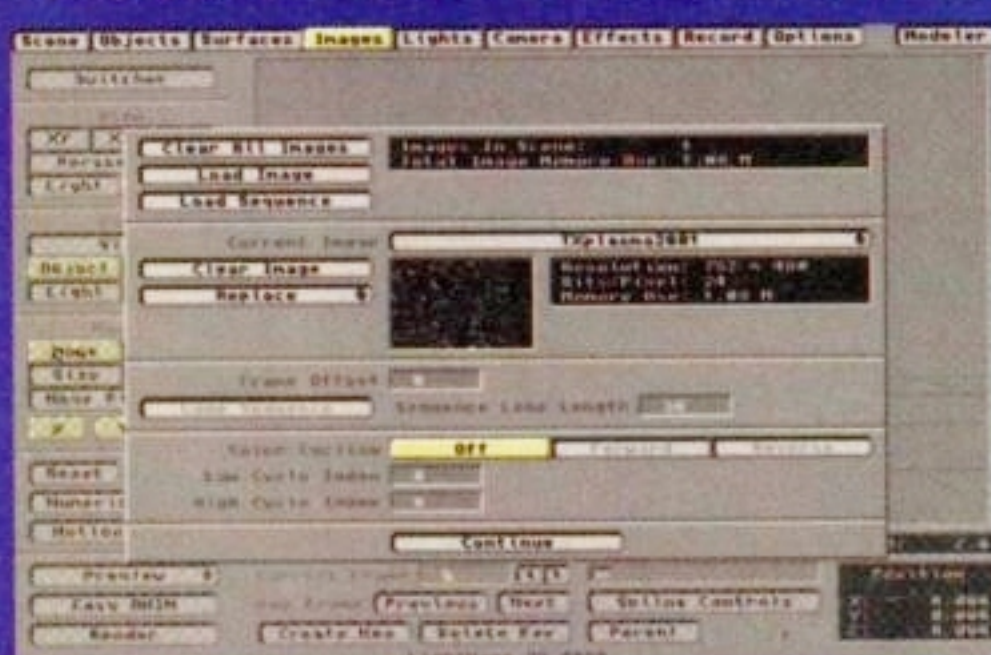

**The gap was** bridged by a morally and legally rather dubious hardware/software combination known as *LightRave*. This product essentially allowed the owner to run *Lightwave* without the cumbersome Toaster filling two slots of their Amigas.

Understandably, Newtek were angered by this encroachment on their intellectual property. Although they won't admit it, it seems likely that this was the proverbial straw that had the coders up all night producing their own, standalone version.

*Lightwave 3.5* no longer needs the Toaster, but it still needs 8Mb of RAM, a hard drive and Workbench 2, so don't take a hammer to your piggybank in haste. *Lightwave* consists of two separate modules: the Modeller, which is used to generate objects, and the Layout module, which is used to set up the scenes to render.

The Modeller is reasonably similar to *Sculpt 4D*, if you remember that classic

## FROM THE MIND TO THE SCREEN – THE BACK COVER PLASMA SPHERE FROM

**1** Read a copy of *Lightwave Pro* and steal a good idea from there. Model a box with a marble texture, to use as a texture map.

**2** Generate a sphere and map the image you generated as a diffusion, luminosity and transparency map.

**3** Generate a smaller sphere and place it inside. Give it some luminosity and a fractal noise texture map.

## THE VOICE OF THE MYSTERONS

A few weeks ago we caught up with Lee Stranahan, who was on a worldwide tour, teaching people how to use *Lightwave*. After 55,000 miles travelling around America in a year, he was preaching to the European Market.

"NewTek has a commitment to make *Lightwave* the industry standard 3D modelling software. We want it to become the 3D equivalent of *Photoshop* (on the Macintosh)," he said.

This would obviously not be possible if *Lightwave* were to remain Toaster-only

software, so unbundling it from the Toaster is the first step in bringing *Lightwave* to a far bigger audience.

"Obviously we are planning versions of the software for other platforms to achieve this goal, in fact these versions are already underway," adds Lee.

So, *Lightwave* will not remain an exclusively Amiga product, but it will at least be fully-compatible with versions on other platforms. This could be a good thing, as it will certainly generate more PD objects and plug-in modules.

original ray-tracing program. All objects are constructed from a series of polygons. Polygons may have three or four sides, and each point on the polygon may form other polygons with other points in the object. In this way a lattice-like surface is built up.

Purists who are used to the mathematical precision of *Real 3D* may balk at this, but given the rather excellent phong/smoothing modes available when rendering, you'll never see a faceted surface – unless you want to.

**Lightwave enables you** to construct objects by deforming primitives. Either a graphic (dragging out shapes on the three view screens) or numeric construction method is possible. Primitives can then be subjected to any amount of bevelling, twisting, shearing, magnetism, drilling, lathing and any amount of Boolean addition, subtraction and XORing that you, or they, can stand.

There is no Quickrender option, so *Imagine* users may be slightly disappointed, but to aid the production of objects, they can be constructed using different layers. There are eight layers available, each of

Improving on nature no longer requires expensive plastic surgery, just click and drag with the *Lightwave* magnet.

which may be selected as the foreground or the background. This means that you can view two objects simultaneously, and use this view to plot your combinations or multi-object manipulations.

**The layout screen** has only one view window, which may be a little weird for all but hardened *Caligari* users, but it is a system that works well. For a start, the view can be set from any of the X-Y-Z plane combinations, or from the camera, or any of the lights or objects. This is very useful, especially when setting up spotlights, because you can make sure that they shine in the right places.

The surface attributes are also controlled in the layout module. This is probably the most powerful part of *Lightwave*. You can control things such as specularity, reflection, transparency and luminosity by percentage values, or by supplying an IFF "map". In this way complicated and impressive surface textures can be produced.

The entire interface is controlled by clicking on buttons with the mouse, no menu options are used at all. This is

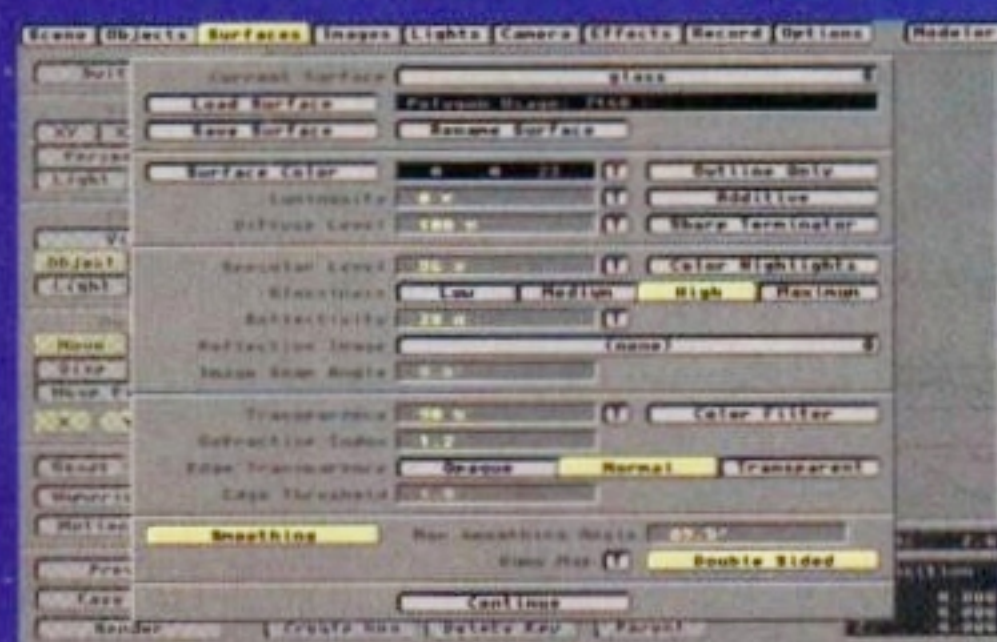

because the Toaster wasn't designed for Amiga users, but for video professionals, whose previous experience of computers would have been limited run-ins with Apple Macs. This is not a bad thing at all, because everything is laid out logically and is easy to find. For software that produces such stunning results, *Lightwave* is surprisingly easy to use.

In these days of worry and trouble over the future of Commodore, it is good to see that the Amiga still leads the way in some things. Ray-tracing is certainly one of them, for as long as *Lightwave* continues to be used.

## NEXT MONTH

See next month's *AF* for a full review of *Lightwave 3.5* (the version that is actually going to be released, not 3.2) and the *PAR* system from DPS. With software of this complexity and expense, we think it only fair to spend the time required to review it properly. We will also have more of *Lightwave* expert Lee Stranahan's informed comments and a full table of features.

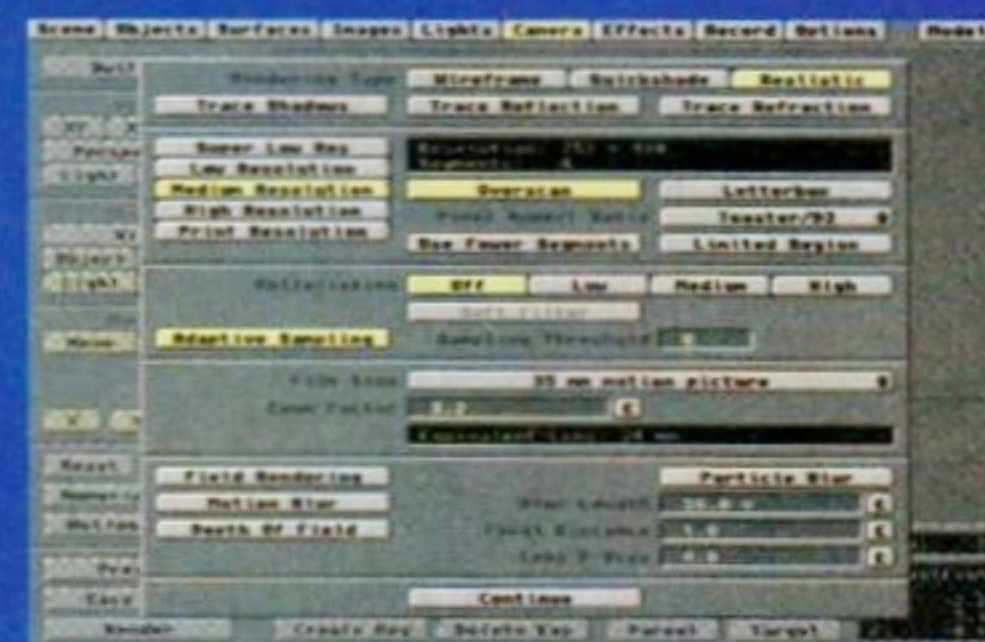

## IMAGINATION TO REALITY.

**4** Make one final sphere and give it glass-type attributes. Scale it up to be slightly bigger than the first sphere.

**5** Position the light and camera where you like. The light will provide a specular reflection on the glass.

**6** Set your render screen and go away for a long time. You should end up with something like the picture on the back cover of this mag. Hurrah!

## Football Forecast Generator

## The New Version

This outstanding football result predictor program gives you the intelligent way to win - predictions are generated from user entered values.

The stored information of the software can be combined with additional team and fixture information from your own sources (e.g. newspapers, tips, latest results etc..) to give you maximum flexibility.

You decide how the predictions are calculated by applying your own choice of 'weights' (e.g. Home advantage, Current form etc..).

**Faster than a very fast thing indeed, John Kennedy tries to keep up with the hottest piece of silicon he's ever stuck in an A4000.**

**T**he Warp Engine heralds the next generation of Amiga computing and it is designed specifically for the A3000 and A4000. The Warp is a beautifully-engineered card which is available in several guises, depending on how much you want to spend (see verdict box). You can even buy the card without a 68040 – specifically for A4000/040 owners to transplant their existing CPU.

Interestingly, the A4000 was actually designed with the older 68030 in mind, especially with regard to memory access. The 25MHz Motorola 68040 present in the high-end Amiga 4000 is unable to access memory well below the theoretical maximum, which means there is plenty of scope for improvement.

MacroSystem have solved this design flaw by coupling the memory directly to the 68040 bus. The Warp board actually features four sockets which accept standard SIMMs of all shapes and sizes (and combinations), and integrates them into the normal system memory.

The standard Fast Memory SIMMs fitted to the Amiga motherboard can therefore be moved to the Warp, which means you won't need to buy more memory to get started.

**That said, the** new processors are so fast that the speed of the memory becomes very important: the 33MHz Warp requires 70ns SIMMs and the 40MHz Warp needs 60ns for best results. Although we tested the 040 card, we only had standard 80ns memory which cramped the Warp's style very slightly as extra wait states had to be inserted by setting a jumper on the card.

The price to pay for the tremendous flexibility in terms of different SIMMs means that certain configurations of memory refuse to form contiguous blocks – apparently you need memory of the correct speed and/or SIMMs larger than 4Mb for this to operate properly.

This might be a problem for *Art Department* users operating with very large objects, and it's worth getting some advice from Premier Vision regarding your own requirements. The maximum memory allowed on the Warp is four 32Mb SIMMs which is almost too large to contemplate.

Of course, the important feature of the Warp is the speed increase: and even a 28MHz Warp card (which consists of a slightly over-clocked 25Mhz chip) runs much faster than a standard A4000/040.

The MIPS rating (a measure of the number of million instructions per second) stays roughly the same, but in

Full speed ahead with the Warp Engine – Sysinfo rates it at over 30 MIPS and 7.7 MFLOPS: more than 50 times faster than an A600.

**WARP ENGINE**

general programs run faster as memory access improves. With the 40MHz Warp card, memory speeds leap from about 14Mb/second to about 64Mb/second.

Combined with the very quick CPU, an Amiga fitted with a 40MHz Warp card runs about three times faster than a traditional A4000/040 – which is about 50 times faster than an A600.

In ordinary, everyday Workbench use this kind of power is mostly hidden, but sheer rippling muscle isn't all this card provides. Included on every Warp Engine card is a full SCSI-II interface. Again, this interface is coupled tightly to the memory and CPU and so works at terrific speeds.

The efficient DMA (Direct Memory Access) design means the CPU doesn't have to constantly deal with the data transfers, so it's ideal for situations which need both processing power and fast data

throughput, such as animation. In tests, we achieved 2.5Mb/second, although with top-of-the-range drives, rates should approach (or exceed) 5Mb/second.

Software supplied with the Warp is limited to a ROM remapper (which uses 512K to shadow the system ROM and so speeds up *Intuition* slightly), and some tools to prepare SCSI hard drives. The lack of other software isn't a problem – it just indicates how transparent the new processor system is for the Amiga.

The only competition for the Warp Engine is the GVP G-Force 040 card, which is priced almost identically. When comparing them, remember that the Warp includes a 'free' SCSI-II interface and unlike the G-Force doesn't require special SIMM modules. The difference in speed between the cards is so close to be almost negligible: they are both incredibly fast.

## WARP ENGINE

### DISTRIBUTOR

Premier Vision 071-721 7050

### PRICE

28MHz without 68040 (for existing A4000/040s) – £599

28MHz with 68040 – £799

33MHz with 68040 – £999

40MHz with 68040 – £1,199

(Ask before ordering, prices may fluctuate)

### SPEED

With the 40MHz Warp Engine, image rendering is so fast it's fun.

### MANUAL

Good manual, although perhaps a little too techie in places.

### ACCESSIBILITY

Stick it in and forget about it. It's fast and no special software is needed.

### FEATURES

Good memory handling, super-speedy SCSI-II interface and full (MMU, FPU) 68040 – all on a card that doesn't need a special Buster or a Zorro slot.

### VALUE

With different versions for different budgets, all A4000/30 owners and most A4000/40 owners should buy it.

**“Fast, elegant, reliable – it places the A4000 back at number one.”**

**93%**

# LIFE IN THE FAST LANE

Tired of getting dirt kicked in your A1200's face by every A4000 that happens to wander by? Tire no more – **Jason Holborn** is here to show you how to get even.

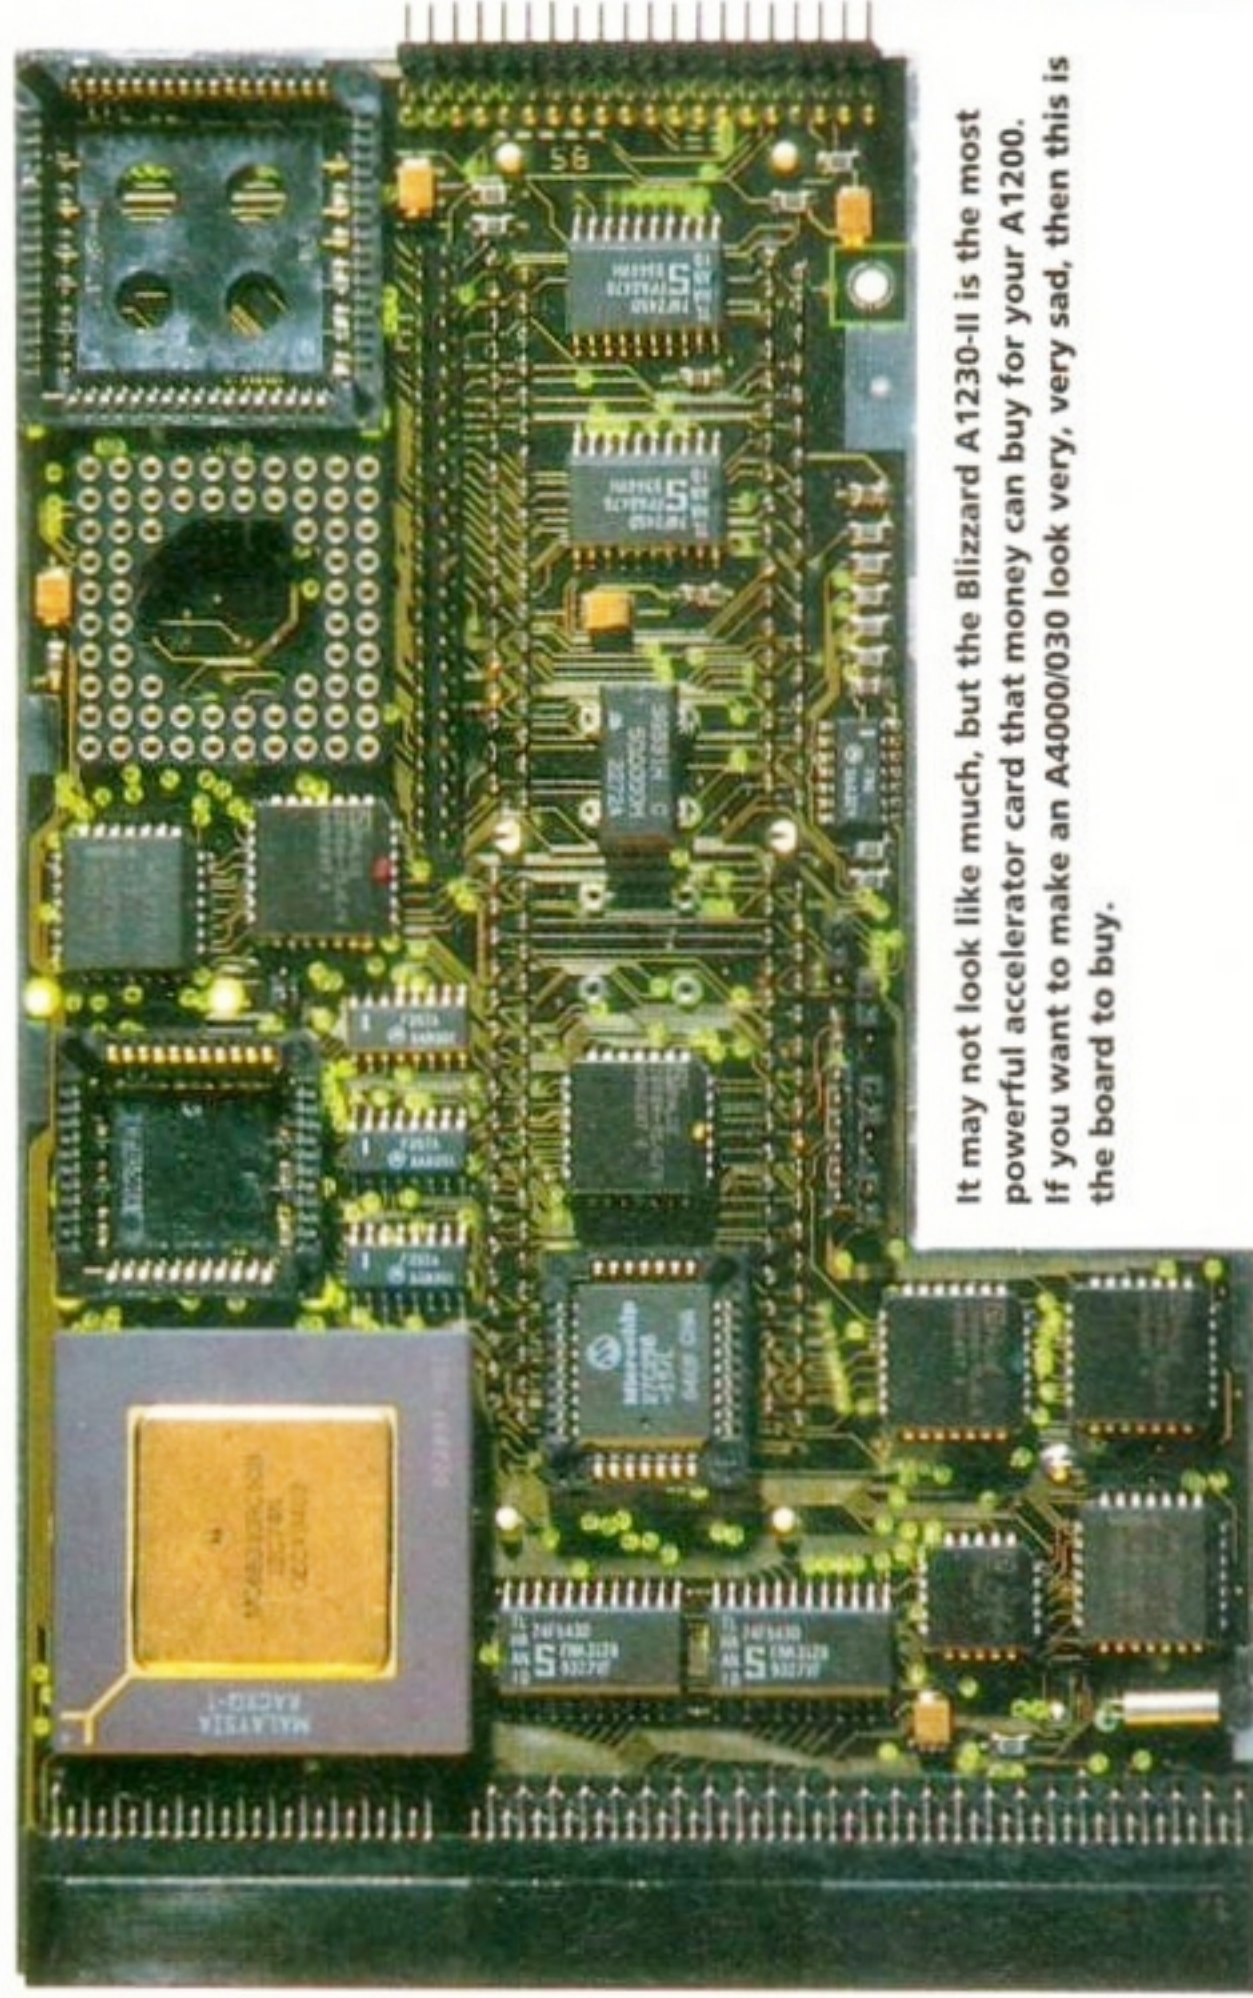

The A1200 is hardly a wimp in the power stakes, but even its huge 68020 processor doesn't cut it when compared to its closest 'big box' brother, the A4000/030. Considering the specification of the A4000, it's easy to see why it kicks butt – for starters, it's based around a 25MHz 68030 CPU (as opposed to the A1200's 14MHz 68020), a processor that is not only more advanced than the A1200's '020 chip but is double its speed too!

Help is at hand, however, in the shape of the processor accelerator cards available for the A1200. With an accelerator card fitted, your A1200 is no longer forced to play second fiddle to the A4000/030 – in some cases, an accelerated A1200 not only matches an A4000/030 but positively leaves it for dead. Ray tracing isn't the only application that benefits from a faster processor – whether you use your Amiga for desktop publishing, image processing, word processing or even playing games, a processor accelerator significantly enhances how fast these programs run.

Most A1200 accelerator cards are based around the Motorola 68030, the big brother of the A1200's own 68020. Like the '020, the 68030 is a true 32-bit processor but it runs much faster than the '020, thanks to a more advanced design and faster internal operation. Like the '020, the 68030 is available in a number of speeds ranging from 16MHz right up to 50MHz – not surprisingly, the faster the chip you buy, the better your system performance.

**Continued overleaf →**

It may not look like much, but the Blizzard A1230-II is the most powerful accelerator card that money can buy for your A1200. If you want to make an A4000/030 look very, very sad, then this is the board to buy.

## BLIZZARD A1230-II

£244.95 (40MHz)/£329.95 (50MHz) ■ Gordon Harwoods ■ 0773 836781

**R**eviewed in last month's issue, the Blizzard A1230-II is possibly the closest to a state-of-the-art accelerator that you are likely to find. It should come as no surprise, therefore, that this little beauty doesn't come cheap – the 50MHz version with 4Mb of RAM (the bare minimum) costs almost £500! This does, however, buy you some serious computing power – stick one of these babies inside your A1200 and you will have a machine that runs almost twice as fast as an A4000/030!

The Blizzard A1230-II is available with a choice of two processors – a 40MHz 68030 with no MMU (Memory Management Unit), or a 50MHz version with MMU. The MMU should be ignored as very little Amiga software actually takes advantage of it – the only possible use we can think of is to run the virtual memory system GigaMem. The obvious attraction of the 50MHz card is its speed – on average, it runs 25% faster than the 40MHz A1230-II.

The Blizzard A1230-II is an exceptionally powerful product that delivers the sort of raw processing power that professionals require. This power does come at a price, though – unless you have a very generous bank manager, the A1230-II will probably remain the stuff that your dreams are made of.

### SPEED

The A1230-II is the fastest A1200 accelerator card available!

### MANUAL

Like all the Blizzard manuals, the main features are covered briefly and in a concise manner.

### FEATURES

The A1230-II not only offers the best performance but its expansion capabilities are state-of-the-art too.

### VALUE

Definitely not the most affordable card on the market but you get exactly what you pay for.

**“The most powerful A1200 accelerator money can buy.”**

# 88%

The Blizzard A1220/4 offers the performance of an '030 accelerator card for the price of a RAM expansion. What a bargain!

## BLIZZARD A1220/4

£229.95 ■ Gordon Harwoods ■ 0773 836781

### SPEED

Very impressive indeed. The A1220/4 is just as fast as its '030-based rivals!

### MANUAL

Although somewhat brief, everything you need to know is covered.

### FEATURES

Unless you need serious expansion capabilities, the A1220/4 does it all.

### VALUE

The A1220/4 is without doubt the best value A1200 accelerator available.

**“The Blizzard A1220/4 earns its Amiga Format Gold award with flying colours.”**

# 95%

**A**t the opposite end of the accelerators market to the A1230-II is the A1220/4, an accelerator card for the A1200 based around a 'clock doubled' version of the A1200's processor, the 68020. Unlike the rest of the competition, the A1220/4 comes as standard with 4Mb of 32-bit RAM – if you need more it can be expanded to a maximum of 8Mb with the addition of Blizzard's own custom memory board (£169.95).

I have to admit that I was a little sceptical of the A1220/4's performance but when I ran the card through the PD benchmark program AIBB 6.1 I discovered that its average speed was only slightly less than Power's 28MHz '030-based Viper board and actually faster than a 25MHz '030-based A4000/030! No, I didn't believe these figures either but continued tests consistently produced the same results.

Based on our tests, the Blizzard A1220/4 is nothing short of a miracle. Although it's not as expandable as Power's board, the price alone makes the A1220/4 the best A1200 accelerator around. It certainly deserves its Format Gold!

The new Viper-II board has been completely redesigned from the ground up to give even greater levels of performance. Unlike its little brother, the Viper-II is available with a faster 40MHz 68030.

## VIPER-II

£179.95 ■ Power Computing ■ 0234 273000

If you need an accelerator with a bit more poke than the standard Viper '030, Power have launched an upgraded version called the Viper-II. Instead of simply tinkering with the existing Viper board, this new Viper has been completely redesigned to give maximum performance for just £20 more than the standard Viper. Based around a 40MHz 68030 (although our review model was based around a 33MHz chip), the Viper-II gives a much needed boost to the A1200.

In terms of expansion, the Viper-II offers a similar range of features to the original Viper, although it can only handle a PGA-style FPU as opposed to the original Viper which can handle both PGA and PLCC-style chips. A minor point perhaps, but worth bearing in mind if you already have a PLCC FPU. Fast RAM can also be added to the board in the form of a single 72-pin SIMM module. Like its little brother, the Viper-II happily handles up to 128Mb of RAM.

Although the model we had for review was only a 33MHz version, the increase in speed was hardly noticeable. Considering that the board is nearing the clock speed of Blizzard's 40MHz A1230-II, I would have expected a 15% increase in performance over the original Viper card. As it is, the Viper-II isn't that much faster than the Blizzard A1220/4.

### SPEED

Considering its specification, the Viper-II's performance is fairly average.

### MANUAL

Power Computing's manuals have always been very good and the Viper-II's manual is no exception.

### FEATURES

A fully-featured board that offers an impressive level of expandability.

### VALUE

Despite its performance shortfalls, the Viper-II still represents good value for money.

**"The Viper-II offers a good balance between speed, expandability and value."**

# 80%

Power's Viper '030 board offers a 28MHz 68030 processor with a Memory Management Unit. RAM is fitted to the board using standard SIMM memory modules.

## VIPER '030

£159.95 ■ Power Computing ■ 0234 273000

Power Computing seem to have their corporate fingers in just about every pie these days – not content with already dominating the market in everything from scanners to RAM expansions and disk drives, the Power boys have something to offer A1200 speed freaks too.

The Viper '030 is an A1200 accelerator card based around a 28MHz 68030. Power's chip isn't an EC unit though – for your money you get a full-blown '030 complete with a Memory Management Unit.

The Viper '030 comes as standard with a battery-backed clock, a socket for an optional Floating Point Unit running at a maximum speed of 50MHz and a feature connector for the addition of an optional SCSI-II adaptor. The Viper '030 can accept RAM in the form of one 72-pin SIMM socket – add 4Mb to the Viper (the bare minimum) and the Viper board becomes a more realistic £309.

In use, the Viper board is certainly a rapid little fellow although its performance is put into perspective when compared to the Blizzard A1220/4. According to our benchmark tests, the Viper board is only around 5% faster than the cheaper A1220/4. Unless you need the Viper's impressive expansion capabilities, go for the A1220/4 instead.

### SPEED

Impressive when compared to a standard A1200 but the Blizzard A1220/4 is hot on its heels.

### MANUAL

A well-written and very readable tome.

### FEATURES

Like its big brother, the Viper offers a good selection of expansion options.

### VALUE

If you're going to buy a Viper, spend an extra £20 and get the Viper-II!

**"A highly expandable board that is let down by its fairly average performance."**

# 72%

The sheer size of the GVP A1230-II makes the task of fitting it to an A1200 very difficult indeed. We actually ended up having to open up the A1200's casing to fit the board.

# GVP A1230-II

£229 (40MHz) / £299 (50MHz) ■ Silica Systems ■ 081-309 1111

The Blizzard boards' most direct rival has to be these two GVP A1230-II boards which are A1200 accelerators that not only share a similar specification to the Blizzard boards but the same name too. Like the Blizzard A1230-II, GVP's accelerator card is available in either a 40MHz version or - for those requiring that extra spurt of speed - a 50MHz version complete with a Memory Management Unit.

The GVP board is impressive-looking, but trying to install it into the confined space of the A1200's trapdoor isn't impressive at all. In fact, it's a real pain because the board is just too big to fit without a considerable amount of nimble finger work. Once installed though, you're ready to burn rubber. And burn rubber this board certainly does - in our tests, the 50MHz board was biting at the heels of Blizzard's mighty 50MHz namesake. Like the Blizzard, the GVP board doesn't come with any expansion RAM or an FPU so these need to be bought either separately or at a combined price.

GVP have always been known to produce state-of-the-art hardware add-ons for the Amiga and the A1230-II is no exception. These days, however, GVP no longer have it all their own way - Blizzard's A1230-II is not only (slightly) faster but cheaper too.

## SPEED

An impressive performer that is only just pipped to the post by the Blizzard card.

## MANUAL

GVP's manual is clearly structured and well designed. A damned good read.

## FEATURES

In terms of features, the GVP card matches its rivals at every turn.

## VALUE

Although it's initially cheap, the higher specification GVP A1230-II is just too expensive in the end.

**"A brilliant performer that will give even the Blizzard A1230-II a run for its money."**

**82%**

## SPEED TESTS

All boards were tested with 4Mb of Fast RAM using the PD benchmark program *Amiga Intuition Based Benchmarks (AIBB)* version 6.1. All three tests were carried out using 68000 code with all floating point operations carried out by the processor rather than a dedicated Floating Point Unit (FPU).

All our tests were carried out using AIBB 6.1, the best Amiga benchmark program available.

## TABLE OF FEATURES

PRODUCT	SUPPLIER	*PRICE	CPU	SPEED	FPU	MMU	MAX RAM	RATING

# NEW! PRODUCTS & NEW LOW PRICES

## G-LOCK VIDEO GENLOCK FOR ALL AMIGAS

This extremely high quality Amiga genlock, from GVP, has an intuition-based software control panel with full AREXX and command line interfaces. It is easy to use and supports most VHS and S-VHS video models. For crisp overlays of scrolling, or static titles, graphics over live video and recording to videotape with high quality results.

**VIDEO:** G-Lock's six video control panels enable you to perform a wide array of special effects on still or motion video including:

- Colorizing for unique visual effects.
- Creating your own "Classic" black & white videos using the Colorkill feature.
- Colour filter effects.
- High-quality keying effects with bitplane or chroma keying.
- Manual or automatic (AREXX triggered) fades and cuts.

**AUDIO:** G-Lock's dual-input audio panel switches, mixes and shapes sound for effects such as:

- Combining stereo channels or separate inputs without a "Y" adaptor.
- Treble and bass equalization.
- Plus, add DSS8+, see below, or any Amiga created/modified digital audio samples to your final mix.

- Simple, Intuitive Mouse-Driven Software Control Panels. Full AREXX, CLI and Workbench Interfaces
- Software Selection of 2 Composite Video Inputs or 1 Y/C (S-Video) Input
- Simultaneous Composite & S-Video and RGB Outputs
- Software Selection or Mixing of 2 Audio Inputs with Volume, Bass and Treble Control
- Software-Driven Video Processing Amplifier Offering Complete Real-Time Signal Processing Control, Including Hue, Brightness and Saturation.
- Software-Controlled RGB Colour Splitter Compatible with Video Digitizers
- Built-in Transcoder Converts Input Video to Composite, Y/C, RGB or YUV Outputs
- Full ECS/AGA Support for Full Compatibility with A1200 and A4000 Systems
- Compatible with Popular Tinting Software like AmigaVision™, Scala-Multimedia 200/210/300™ and Gold Disk's Video Director™
- Full Audio Support

## A1230-II 40MHz & 50MHz ACCELERATORS FOR AMIGA 1200

The new GVP A1230-II advanced accelerators are available in 40MHz 68030EC and 50MHz 68030 configurations. They can make your Amiga run at least 6x times (40MHz version) or at least 8x times (50MHz version) faster than the standard A1200 and feature unique warranty safe module expandability - see right.

### MMU OR FPU?

The 50MHz version includes a built-in Memory Management Module (MMU), for more sophisticated memory control. An optional FPU (Floating Point Unit: for faster maths calculations) is available for the 40MHz and 50MHz versions (see below), both have RAM upgrade options (up to 32Mb, see right).

## EGS SPECTRUM 24-BIT GRAPHICS CARD

### FOR A1500/A2000/A3000/A4000 TAKES YOUR AMIGA BEYOND AGA!

EGS Spectrum is the answer to all your 24-bit graphics card requirements. It is a high performance, high resolution, 24-bit board that will take any Amiga 1500, 2000, 3000 or 4000 beyond AGA! But the hardware is only half of the picture. Without quality software, your investment will be wasted. Not only does GVP's own award winning graphics application ImageFX fully support EGS Spectrum, but also, using a Workbench driver, nearly all existing Amiga Workbench compatible applications will also work on and support the EGS Spectrum system.

- 2Mb of On-Board Memory  
2Mb gives higher resolutions & more colours (1600 x 1280)
- Programmable Resolutions Up To an Amazing 1600 x 1280 - 800 x 600 in 24-bit
- Real-Time 24-bit Display and Graphics Operating System!
- High-Performance 24-bit EGS-Paint Package for Professional Painting and Photographic Editing
- Amiga-RGB Pass-Through so the Amiga and the EGS SPECTRUM can Share a Single Monitor
- Zorro II (16-bit) and Zorro-III (32-bit) AutoSensing for Maximum Performance
- Scan Rates Up To 80KHz
- 80,000,000 Pixels/sec Pixel Display Speed (8-bit)

- Workbench driver to run Workbench directly on the EGS SPECTRUM Board, Freeing Up Valuable Chip RAM
- Hardware Blitter to Accelerate All GUI Operations, Including the Workbench Driver

- System Conforming Applications Can Use the EGS Screenmodes Directly from the Display Database
- EGS Requires Kickstart 2.04 or Higher

## G-FORCE 040 40MHz ACCELERATORS

### FOR A3000/A4000 MAKE YOUR AMIGA THE FASTEST IN THE WORLD!

Never before has such a powerful processor been available for the Amiga! The G-Force 040 puts a 40MHz Motorola 040, plus built-in 40MHz 68882 FPU into your A4000 (030 or 040) and couples it with up to 32Mb of super fast 32-bit SIMM memory on the board. The Standard board comes with 4Mb RAM - see left for RAM upgrades.

To further increase memory from the maximum 32Mb available on the G-Force 040 card, add one of the two 96Mb memory expansion boards available - see left. These enable you to take your total memory up to an amazing 128Mb RAM, directly connected to this blazing processor.

For maximum performance, a second optional module will be available soon, for a full 32-bit SCSI2FAST interface, capable of data transfer speeds up to an amazing 10Mb per second!

- Fast 040 Accelerator + RAM for A3000/A4000
- 40MHz 68040 Processor
- 40MHz 68882 FPU Built-in to the 68040 Chip
- Make your A4000/030 at least 12 Times Quicker
- 4Mb RAM Fitted, Expandable to 32Mb on the Board, to a Total of 128Mb via an Extra Card - see left
- SCSI-II Fast Optional (Pricing TBC)

### G-FORCE 040

40MHz 4Mb RAM

## 8-BIT SOUND SAMPLER FOR ALL AMIGAS

Capture sound from an external source and play it back in stereo or mono on your Amiga. The latest version of GVP's Digital Sound Studio (DSS8+) enables you to create audio effects for use in games or jingles.

- New Style High Impact, Clear Poly-Carbonate Casing
- Simultaneously Holds up to 31 Sound Samples in Memory
- Real-time Oscilloscope, Spectrum Analysis, Echo & Reverberation
- AREXX Compatible
- Microphone Input
- MOD File & MIDI Compatible
- FREE Samples Disk

### DSS8+

£69

**£49**

INCLUDING VAT - MUS 2510

## VIDEO EFFECTS FOR ALL AMIGAS WITH 3Mb RAM

CineMorph from GVP opens up the world of Morphing, the process of converting one image to another to create dazzling special effects. Currently very popular in music videos and feature films, morphing has become the fashionable video effect to use. Now with CineMorph you can create these stunning effects on your Amiga.

- Supports the AGA Chipset
- Static or Full Motion Morphing
- Single Image Warping
- Fast Render Times
- Renders to HAM-E and DCTV

### CINEMORPH

£19

**£19**

INCLUDING VAT - ASC 4422

## IMAGE PROCESSING FOR ALL AMIGAS WITH 4Mb RAM

Image FX is a complete solution for all your image creation and editing needs. It has a vast range of facilities, can read and write to many other different file formats and directly controls a wide variety of hardware.

- 24-bit Painting
- AREXX Compatible
- Virtual Memory Support
- Load, Save and Convert to the Following Formats: ANIM, BMP, Clipboard, DCTV, DPIIE, GIF, HAM-E, ILBM, IMPULSE, JPEG, RENDITION, SCULPT, TARGA, TIFF AND MORE
- Scanning, Framgrabbing & 24-bit Board Support
- Comes with Modules for Several Hardware Devices: JX100, IV24, AGA/AA Chipset
- Create Animations
- Numerous Special Effects: Edge Feathering, Shading, Alpha Channel, Morphing, Compositing etc

## THE SILICA SERVICE

Before you decide when to buy your new Amiga products, we suggest you think very carefully about WHERE you buy them. Consider what it will be like a few months after you have made your purchase, when you may require additional peripherals or software, or help and advice. And, will the company you buy from contact you with details of new products? At Silica, we ensure that you will have nothing to worry about. With our unrivalled experience and expertise, we can meet our customers' requirements with an understanding which is second to none. Complete and return the coupon now for our latest FREE literature and begin to experience the "Silica Service".

- FREE OVERNIGHT DELIVERY:**  
On all hardware orders shipped in the UK mainland (there is a small charge for Saturday delivery).
- TECHNICAL SUPPORT HELPLINE:**  
A team of technical experts will be at your service.
- PRICE MATCH:**  
We match competitors on a "Same product - Same price" basis.
- ESTABLISHED 16 YEARS:**  
We have a proven track record in professional computer sales.

# AMIGA OS 3.1

**With the launch of Workbench 3.1, A500 and A2000 owners no longer have to sit back and watch as the new 32-bit Amigas steal the limelight. Jason Holborn injects new life into his old A500.**

**A**lthough the advancements in Amiga technology have certainly been good news for those with enough money to upgrade, the release of the AGA chip set and Workbench 3.0 back in October 1992 seemed to mark the end of the road for the 16-bit Amigas.

Commodore attempted to appease A500 and A2000 owners with Workbench 2.1 (a stripped down version of Workbench 3.0), but also made it clear that the age of 16-bit computing had come to an end – from then on, you either upgraded to a swish new 32-bit AGA Amiga or you were left behind.

**Two years on** from that decision, Commodore's latest upgrade to the Amiga's operating system, OS 3.1, has been designed to run on all (well, most) Amigas ranging from the mighty A4000/040 to the humble A500. Surprisingly, however, the new operating system isn't sold by Commodore, but the

German software distributor VillageTronic. According to one developer we spoke to, Commodore were forced to license OS 3.1 simply because they couldn't afford to distribute the product themselves! As it is, VillageTronic sell OS 3.1 and Commodore get a licence fee from each copy sold.

The upgrade consists of a rather hefty box containing three manuals covering Workbench, AmigaDOS and ARexx, six disks

If you have a Picasso II graphics card inside your A2000 or A3000, OS 3.1 enables you to open a 256-colour Workbench.

and a Kickstart ROM. Although the disks are the same whichever version you buy, it is important to make sure that you buy the upgrade pack designed for your machine.

At the last count, there were three different versions of the upgrade – one for the A500 and the A2000, another for A3000 and A3000T owners and one for the A4000. Surprisingly, there isn't an upgrade for either the A600 or the A1200.

## CD-ROM SUPPORT AT LAST!

This new version of the Amiga's operating system finally provides direct support for CD-ROM drives, a feature which has held the machine back in the face of stiff competition from the PC and Mac. Although OS 3.1 enables you to read data from any standard ISO9660 CD-ROM, it's not quite as well implemented as we had been led to believe.

Commodore claimed that the CD-ROM filing system they were developing would be built into ROM but this is not the case. Instead, CD-ROM drives are handled via a file system handler called CDFileSystem which can be found in the L: directory.

Like the PD and commercial CD file systems that we've been forced to use prior to the launch of Kickstart 3.1, a CD-ROM drive connected to your Amiga is not recognised until it is mounted either manually or during boot up. What this essentially means is that it's still not possible to boot an Amiga from CD-ROM. Come on guys, this is unacceptable!

One nice addition to the Amiga operating system that isn't even mentioned in the three manuals that come with OS 3.1 is the new chunky planar functions built in to the graphics library. These functions provide the Amiga with something that will make CD-ROM developers jump with joy – Akiko emulation.

This means that any Amiga equipped with Kickstart 3.1 can run CD<sup>32</sup> games that make use of the Akiko chip (*Microcosm*, for example). Obviously, you still need the AGA chip set and so this feature is probably only of any use to A4000 owners who wish to run CD<sup>32</sup> games.

The Amiga graphics library now has Akiko emulation which allows CD-ROM owners to run CD<sup>32</sup> games such as *Microcosm* that make use of the Akiko chip.

**Have Commodore deserted** A1200 owners? Well, not quite. According to Toby Simpson, lead programmer at Millenium, there's very little difference between Kickstart 3.1 and the Kickstart 3.0 ROM used by the A1200 and A4000.

## FITTING 3.1 TO AN A500/2000

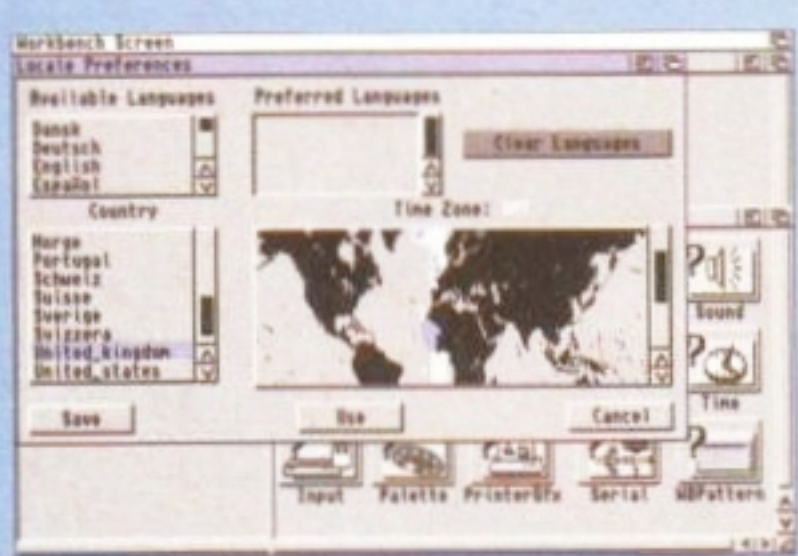

Even if you don't own a revision 6A B2000 or an A500 Plus, it's still possible to upgrade your 16-bit Amiga. Kickstart 3.1 can be fitted to just about any A500 or A2000 regardless of the board revision, although simple modifications need to be carried out on older machines.

In the case of the A500, for example, the chip can be slotted straight into a revision 6A machine (the A500 Plus) although it is necessary to fit a jumper between pins 1 and 31 on revision 3 or 5 A500s. The same modification is also necessary on A2000s with revision 3 or less boards.

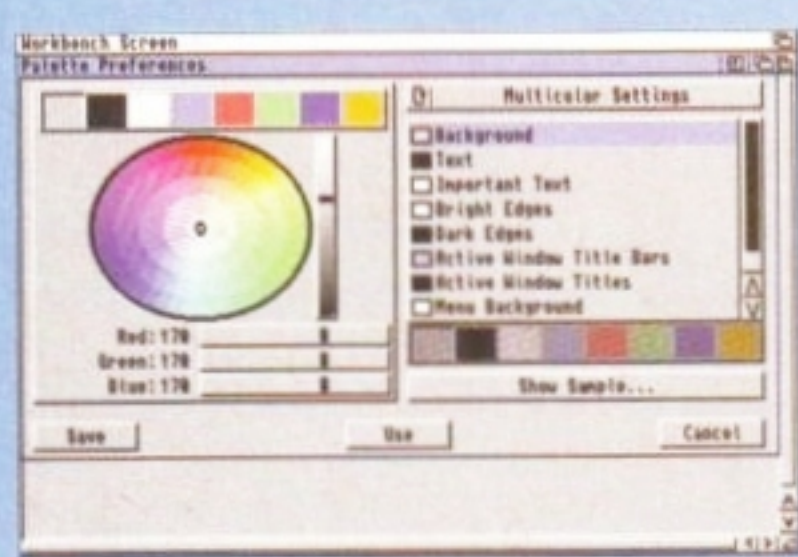

# OS 3.1 LAID BARE

If you already own a Workbench 3.0-based Amiga then OS 3.1 won't offer anything particularly new. For those fresh to the joys of the latest Amiga operating system, however, here's a run-down of what's on offer.

**LOCALISATION**  
Localisation is a brand new feature added to the Amiga which enables programmers to develop applications that can be run in a number of different languages. All the user has to do is to choose which language they want

to use from a Preference editor. Any applications that support localisation then automatically display text in that chosen language.

**IMPROVED PREFERENCES**  
Virtually all the Preference editors have been revamped to make them easier to use and more capable. The Palette requester, for example, now provides precise control over the rendering colours of

a whole range of Workbench elements - window title bars, menu text and so on. Picking colours is also a lot easier thanks to a new colour wheel gadget which is similar to that used on the Macintosh. You can now place an IFF picture in the background bitmap of your windows or even the Workbench screen itself, assign a sound sample to the system beep and so on.

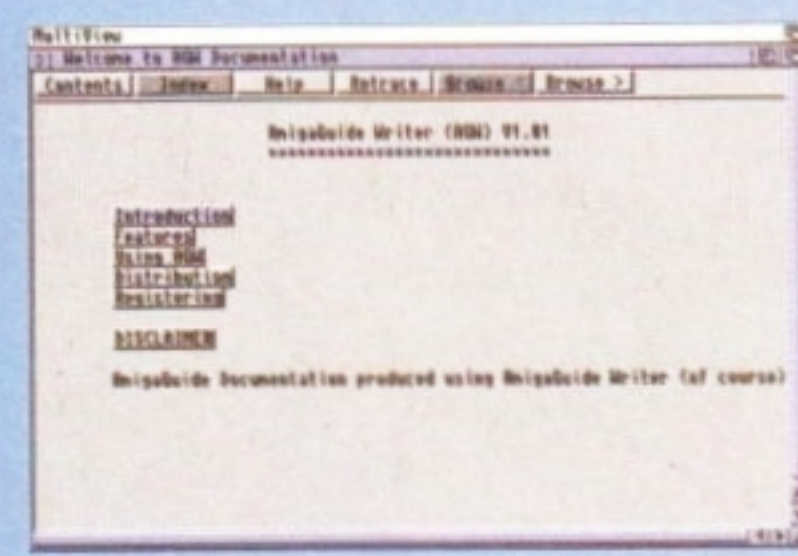

**POSTSCRIPT PRINTING** One of the most eagerly-awaited features of 3.0/3.1 is support for direct PostScript printing. Up until now programs had to be specially written to talk to a postscript printer. Now, any application can print to a PostScript printer.

**CROSSDOS** Although it's been available for years now, Commodore have licensed CrossDOS and it's now built into the Amiga operating system enabling any Amiga with OS 3.1 to read and write to 720K MS-DOS disks. If you have a high density disk drive, you can also read 1.44Mb MS-DOS disks.

JPEG and PCX datatype files. To demonstrate these capabilities, OS 3.1 includes a utility called Multiview that uses datatypes to display anything from an animation or a sound sample to an IFF picture.

**DATATYPES/ MULTIVIEW**  
Datatypes provide a common method of extending the file handling capabilities of a utility so that it can handle additional file formats. A graphics package, for example, could be made to load JPEG or PCX images simply by adding

**AMIGAGUIDE**  
AmigaGuide provides programmers with a common method of adding on-line help facilities to their applications. The great thing about AmigaGuide files are that they are hypertext-based. You can therefore

access the information that you want to read simply by clicking on key words which are displayed by AmigaGuide as bevelled buttons. Hypertext-based documents are much friendlier than normal ASCII documents because you don't have to search through the entire document to find the information you want.

# UNDER THE BONNET

One of the most enjoyable aspects of upgrading to a new version of the operating system is to hunt for all those additional hidden files that Commodore don't like to talk about. Here's a quick guide to what delights you can expect to find.

**LIBS:realtime.library** - This new library is designed to give programmers an easy method of generating extremely accurate timings for programs such as MIDI sequencers, and multimedia authoring systems.

**LIBS:lowlevel.library** - It's common knowledge that programming the Amiga's hardware directly is bad news and so Commodore have provided games programmers with a quick and easy method of accessing certain aspects of the hardware quickly and (more importantly) legally.

**LIBS:nonvolatile.library** - Like the lowlevel library, this library is aimed fairly and squarely at games programmers and provides a method of saving game positions within their games software without having to know what devices are available.

What differences do exist are very, very minimal. Even then, the OS 3.1 version of SetPatch automatically patches the 3.0 ROM so there's little to be gained by fitting Kickstart 3.1 to either an A1200 (if it were possible) or an A4000. Just to make sure, I tried the OS 3.1 system disks on an A1200 and - surprise, surprise - they worked fine.

**Booting up the** Amiga with the Workbench 3.1 disks is a bit of an anticlimax if you're already running Workbench 3.0, but owners of the original 16-bit Amigas will probably find the new Workbench more interesting.

A considerable amount of work has obviously been put into recoding the Amiga layers and graphics libraries because Workbench gadgets and windows are redrawn considerably faster than before. Even on a non-AGA system, Workbench redraws seem much smoother.

One thing that must be stressed is that fitting Kickstart 3.1 to your 16-bit Amiga won't automatically give you the graphic capabilities of an AGA machine - you'll get all the advantages of the latest version of Workbench, but OS 3.1 has no effect on the graphic capabilities of your Amiga.

To be fair, the programmers of OS 3.1 have attempted to redress the balance by

providing improved support for 24-bit graphics cards. Providing you have a card that supports the Amiga display database (*Picasso II RTG*, for example) it's perfectly possible to open a 256-colour Workbench.

Workbench 3.1 has taken a very long time to arrive - registered developers have had it installed on their Amigas for over a year now. I could understand the delay if it offered anything particularly new but as it is, OS 3.1 isn't really that much different from OS 3.0.

CD-ROM and the improved graphics modes are a welcome addition but that's about all you get for your money if you're upgrading from Workbench 3.0. For A1200 and A4000 owners at least, OS 3.1 is something of a disappointment.

**Owners of older** Amigas, on the other hand, should welcome OS 3.1. Although the differences between 3.1 and 3.0 are minimal, 3.1 is more capable than 2.04 or 2.1, the last major Workbench upgrade for 16-bit Amigas. If you have an A500, an A2000 or an A3000, OS 3.1 is a must. It gives you an Amiga that is bang up to date (minus AGA, of course) and you'll have a machine that is friendlier, more powerful and can run all the latest software. Don't get left behind - get OS 3.1.

## AMIGA OS 3.1

**DISTRIBUTOR**  
Blittersoft 0908 220196

**PRICE**  
£84.95 (A500/A2000)  
£94.95 (A3000/A4000)

**SPEED** ●●●●●  
Rendering of *Intuition* windows and gadgets is considerably improved over previous Workbench releases.

**MANUAL** ●●●●●  
Commodore manuals are usually lousy but the three manuals bundled with OS 3.1 are actually quite readable.

**ACCESSIBILITY** ●●●●●  
Installing the ROM is straightforward and an installation disk is included for the systems software.

**FEATURES** ●●●  
A very disappointing upgrade for A1200 or A4000 owners but essential for everyone else.

**VALUE** ●●  
Almost £100 for a single chip, six disks and a couple of manuals is a little on the steep side.

**"If you own a 16-bit Amiga then OS 3.1 is an absolute must."**

# COMMUNICATOR

Why buy a dedicated CD-ROM drive for your Amiga when you already have a CD32 hanging around?

Jason Holborn investigates Eureka's new Communicator.

Connecting a CDTV to an Amiga is nothing new – thanks to the PD program *Parnet*, many Amiga users have been able to enjoy the wonders of CD-ROM technology long before Commodore announced the launch of the CD1200.

Life isn't as easy if you own a CD32. In an attempt to keep down the cost of the CD32, a parallel port wasn't included, so *Parnet* can't be used with it.

Realising that there's a buck or two to be made from people wishing to connect their CD32s to an Amiga, Holland-based Eureka launched Communicator, a hardware add-on for the CD32.

Communicator connects to the CD32 via its AUX (serial) port. The three status LEDs are probably a very good idea because the link between Communicator and the CD32 is so weak that even a tiny nudge can disconnect it. Eureka claim that this problem is being addressed and so the units that appear in the shops should offer a more stable connection.

**Bundled with Communicator** is a floppy disk and a CD-ROM containing all the necessary driver software to get the CD32 talking to your Amiga. Both are important and must be loaded into the CD32 and the Amiga simultaneously for communication to take place.

As for the Amiga, the communications link is established using a program called *CommBook* which provides access to Communicator's full range of features via an icon-driven menu system.

At its most basic level, Communicator can be used to pull data from CD-ROM into an Amiga. Unlike a *Parnet* set-up, Communicator is serial-based and so the speed of data transfer can be painfully

Get your CD32 talking to the outside world with Eureka's Communicator.

slow. Although you can knock the transfer rate up to 115,200bps (bytes per second), transferring data at this sort of speed is just too unreliable. A far better transfer rate is 64,000bps which provides the best balance between speed and reliability.

**Communicator treats the** CD32 as a standard *AmigaDOS* device (CD0: to be precise), so you can move back and forth through the directory structure of any CD-ROM disc in much the same way as you would a hard disk or floppy.

Communicator doesn't just stop at simple file transfers, however. Lurking elsewhere on the CD-ROM bundled with the unit is a program called *PhotoLite* that provides the CD32 with full Kodak PhotoCD compatibility. *PhotoLite* isn't as

interactive as a program like *PhotoWorx* – all it really does is to provide a simple way of viewing the contents of a PhotoCD as a high-resolution HAM8 slideshow.

Communicator is essentially a very good product but it's let down by its price. Expecting CD32 owners to pay £169.95 for a device that is no better than the PD *Parnet* package (which costs about £10) just doesn't make sense.

If you consider that Almathera Systems (081-687 0040) sell a Turbo Sernet serial adaptor kit for the CD32 that does the same job as Communicator for £39.95, it doesn't take much brain power to realise why Communicator isn't so great after all. OK, so it's more flexible but I wouldn't pay an extra £130 for a couple of MIDI ports and a keyboard connector.

## COMMUNICATOR

**DISTRIBUTOR**  
Meridian 081-543 3500

**PRICE**  
£169.95

**SPEED** ●●  
Transferring files from CD-ROM is laboriously slow even when running at higher baud rates.

**FLEXIBILITY** ●●●●  
Communicator doesn't just transfer files. You can use it to view PhotoCDs and AGA pics, and lots more besides.

**MANUAL** ●●●  
Although somewhat brief, Communicator's manual gets all the necessary information across in clear, lucid English.

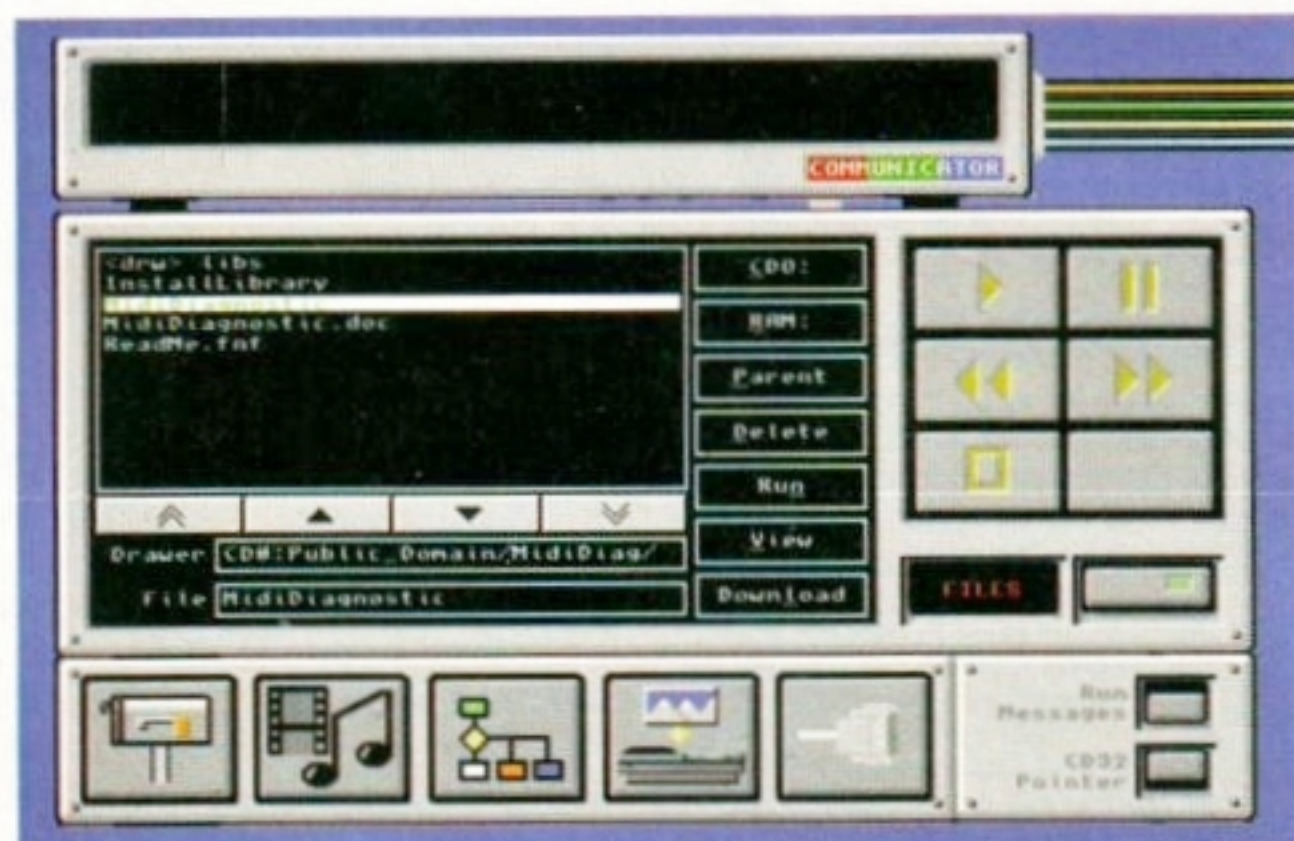

**ACCESSIBILITY** ●●●  
Rather confusing to start with but you soon get the hang of it.

**FEATURES** ●●●●  
A feature-packed product that gets the job done.

**VALUE** ●●  
Personally I'd rather spend the extra £30 and get an SX-1!

**"A good product that's only let down by its horrendous price tag."**

**62%**

Jason Holborn gets on line with a little help from Power Computing's new Aceex V.32bis fax modem.

# ACEEX 1414

The Aceex 1414 is one of the first in what promises to be a new range of 14,400 baud modems for under £200.

**H**ow much you spend on a modem is usually directly proportional to how much you save on your phone bill, so if you buy a cheap 2,400 baud modem for £50 you can expect an unwelcome and large phone bill. But if you spend a few more pounds on a fast modem you'll be struck off British Telecom's Christmas card list faster than the boss of Mercury Communications. As the old saying goes, you get what you pay for.

And now is a very good time to spend those extra few pounds, because with the arrival of the latest batch of V.32Terbo and V-Fast (V.34) modems, the prices of 14,400 baud V.32bis modems are dropping faster than a lead weight.

**Ushering in a new age** of sub-£200 high-speed communications is Power Computing's new £170 Aceex 1414 modem, a V.32bis modem complete with full fax capabilities. In specification terms at least, the Aceex modem is almost identical to Supra's V.32bis fax modem, which is not necessarily a bad thing when you consider that Supra's modem still costs more than £200.

Not only that, but it's common knowledge that the Rockwell chip set used

on early versions of the Supra wasn't quite as stable as it could be. Although, to be fair to Supra, that problem was remedied on later releases of the modem.

But back to the Aceex – first impressions aren't good. The unit is almost twice the size of its two main rivals, the Supra's V.32bis and US Robotics' 14,400 Sportster. Thankfully, the build quality is much better and the Aceex has a sturdy aluminium casing.

**The front display** is a little disappointing, however – apart from a couple of flashing LEDs, status information is kept to a minimum. Perhaps I'm just spoilt by the Supra's rather fancy matrix display.

For normal communications work, the modem works very well indeed. Although it has a maximum data transfer rate of just 14,400 baud, the error correction and data

compression capabilities increase this throughput considerably if the Bulletin Board or modem you're calling also supports the necessary protocols. Both CIX and 01 For Amiga (the two most popular Amiga BBS systems) support V.32bis.

If you've grown used to a slower modem, downloading files with a 14,400 modem is something of a culture shock!

The Aceex offers MNP class 2-4 error correction, MNP class 5 data compression as well as the CCITT V.42 equivalents. In all, an impressive line up of features.

Getting your hands on a fast modem used to be an expensive business but the arrival of Power's Aceex has changed all that. Although it may not be the prettiest piece of hardware around, looks aren't everything. If you're still running on a slower modem and you take your communications seriously then the Aceex is well worth further investigation.

## ACEEX MODEM

### DISTRIBUTOR

Power Computing 0234 273000

### PRICE

£169.95

### FEATURES

Offering full fax capabilities and V.32bis performance, the Aceex is feature-packed in the extreme.

### VALUE

Retailing for £50 cheaper than its nearest rival, the Aceex represents great value for money.

### SPEED

It may not quite match the latest breed of Terbo modems, but the Aceex is rapid nonetheless.

### MANUAL

A totally top-notch manual that covers even the most complicated issues in clear English.

### ACCESSIBILITY

Plug it in, switch on and load up NComm – how much more accessible can you get?

**"A great modem at an exceptional price. The Aceex is highly recommended."**

**90%**

## FAX OF LIFE

Power Computing sell the Aceex modem in two different packs – for £169.95 you get just the modem and a copy of the Public Domain communications program NComm 2.0.

For an extra £30 Power also supply the modem with a copy of VillageTronics' brilliant fax software, TrapFAX. If you want to take advantage of the Aceex 1414 modem's fax capabilities, then this is a definite must.

During continued tests, the combination of TrapFAX and the Aceex modem proved very reliable indeed. There were slight 'warping' problems with some of the faxes we received but this was too rare an occurrence to be a real problem. Having used the fax capabilities of the Supra V.32bis for a number of years, the temperament of the Aceex came as a breath of fresh air – Supras can be a bit hit and miss.

If you want to send and receive faxes with your new modem, Power supply a copy of TrapFAX for an extra £30.

# SYNCR0 EXPRESS

FOR A500/1200/2000/3000

**NOW WITH  
UNIQUE  
BACKUP TO  
HARD DRIVE  
FEATURE.**

**THE ANSWER TO ALL  
YOUR DISK  
BACKUP  
PROBLEMS.**

**£34.99**

**THE WORLDS MOST POWERFUL DISK  
BACKUP SYSTEM IS NOW EVEN BETTER!**

**SYNCR0 EXPRESS VERSION 4.0 IS HERE!**

SYNCR0 EXPRESS is a sophisticated hardware and software package that works by directly controlling your second drive as a slave device ignoring the Amiga's own disk drive controller. In this way SYNCR0 EXPRESS delivers the power to backup programs when other backup systems fail.

- Very simple to use, requires no user knowledge.
- The most powerful disk backup system ever conceived.
- Powerful SYNCR0 MODE actually synchronises your drives to achieve even greater backup power!
- Menu driven selection of start/end track. Up to 85 tracks.
- Totally 'transparent' hardware switches out automatically when not in use.

**NOW WITH UNIQUE BACKUP TO HARD DRIVE FEATURE.** SYNCR0 EXPRESS V 4.0 will now backup your auto booting programs - even games-directly to hard drive. Programs will load from hard drive as a Virtual floppy. Just imagine your programs loading like lightning from your hard drive!! Works with many programs.

Unique custom chip gives SYNCR0 EXPRESS the power to backup programs when all other backup systems fail. EVEN TO HARD DRIVE!

**If you don't have a second drive we can supply SYNCR0 EXPRESS together with a high quality disk drive**

**£79.99**

**Jason Holborn digs deep into the latest stack of PD disks to crash on to his desk. Will it continue to take the strain? Will he? And what gems has Jason brought to the surface?**

# PD Update

If I have one regret in life, it must be the fact that the Atari arcade game *Super Sprint* never made it on to the Amiga. *Super Sprint* may have lacked the realism of driving games such as *Lotus Esprit Challenge*, or the break-neck speeds of Acid's *Skid Marks*, but it had that one vital ingredient – playability – in abundance.

Nostalgic ramblings aside, I am sure you can appreciate just how pleased I was to receive a copy of *Moose Drive* (Choice Software disk G242), a PD version of my childhood gaming love. Quite why it is called *Moose Drive* has yet to be revealed, but its quality gameplay is apparent from your very first outing on to the course. Like *Super Sprint*, *Moose Drive* displays a bird's-eye view of the track which scrolls smoothly as you drive your car around the course. The race is far from one-sided, however, as you're competing against two other computer-controlled cars. These computer opponents are easy to beat on the earlier tracks but they start to get very tough indeed on the later levels.

The *Super Sprint* similarities don't stop here. Each time you win a race you are awarded prize money which can be used to buy enhancements to your car – new motors, new batteries and new tyres. All these enhance your car in different ways – a new motor, for example, increases your car's acceleration and top end performance, and a new set of tyres improves your car's traction.

**Badged as the** most powerful calendar program ever to be developed for the Amiga, *Epoch 6* (Essex Computer Systems Licenseware) makes some brave claims. But how powerful can a calendar program be? Surprisingly, however, *Epoch* seems to live up to these claims – after all, what other calendar utility allows you to add a scheduled event and even shows you a map of where the event is to take place?

*Epoch* is a 1,299 year diary-come-calendar program that enables you to keep track of all those important events and appointments that you simply can't afford to forget. When you first run the program you're presented with a calendar for the

**EPOCH:** Keep track of all those important appointments and anniversaries with *Epoch 6*.

**MOOSE DRIVE:** Prove your worth on the race track with *Moose Drive*. Mirror, signal, manoeuvre? Feed the steering wheel through your hands? Pah! Everything your driving instructor taught you goes straight out of the window!

current month. All you then have to do is to click on the day that you would like to assign an event to and *Epoch*'s scheduler window pops into view. From here you can enter all the necessary information that you need to remember – what time the event is to take place, its category (such as an appointment or job interview), how important you rate it and so on. Just in case you need to call someone at a given time, you can even link the event to *Epoch*'s built in address book. Great stuff!

**Anyone remember the** blood 'n' guts shoot-em-up *Zombie Apocalypse* we featured on AF52's Coverdisk? Not only was it a fine example of the capabilities of Acid Software's *Blitz Basic 2* programming language, but it was also the first and only game featured in *Amiga Format* to get a 15 rating! Now, a year later, the Acid boys are back with the PD release of a follow-up – enter *Zombie Apocalypse 2* (Cynostic disk G0225).

Although the *Operation Wolf*-like gameplay has remained virtually unchanged, this latest release sees you up against a whole new horde of brain-thirsty zombies hell bent on your destruction. Your job is to blast and shoot your way through the marauding corpses. And *Zombie Apocalypse 2* is gorier than the original (if that's possible). Whenever you shoot a zombie his remains are

**ZOMBIE APOCALYPSE 2:** A gorefest shoot-em-up in the style of the classic arcade game, *Operation Wolf*.

splattered around the screen and blood even appears to spray over the player's viewpoint – giving everything a gory red tint as play progresses. This is not a game for the faint-hearted!

Why is it that technical books are so expensive? Take the official ROM *Kernel Manuals*, for example – £35 per volume? Gimme a break! With the launch of *CLIndex* (Jorvik PD), swatting up on your favourite computer needn't be expensive.

*CLIndex* is jam-packed with text files detailing virtually all aspects of the Amiga's Shell environment. Not only is there a run-down of every

**Continued overleaf →**

**SUPER OBLITERATION:** *Super Obliteration's* gameplay may not look particularly rivetting but you'll be surprised at just how addictive it is. Once you get in to it you'll be playing for hours.

← *AmigaDOS* command on offer, but there's also essential information on such things as command redirection, script files and other equally jolly subjects. *CLIndex* may not be a substitute for a *real* book (reading its text files in bed/over breakfast/on the loo is difficult!), but who cares when it's so cheap!

*Super Sprint* isn't the only arcade game to receive the PD treatment in this month's PD Update. *Super Obliteration* (Cynostic disk G0223) is a PD conversion of the arcade game *Pang!*. Although not quite as popular as *Super Sprint* among the arcade-going public, *Pang!* had a loyal band of followers who pumped a steady supply of coins into its slot.

**Upon first inspection** you probably won't be that excited by *Super Obliteration's* gameplay, but once you get into the game you'll be more impressed – the idea is to control a little astronaut who runs back and forth along the bottom of the screen. With cannon in hand, you must break up the asteroids that bounce around everywhere by shooting them as many times as possible. Whenever an asteroid is hit, it splits into two – and you may even be awarded a bonus for your troubles. Some bonuses simply add to your score while others aid you in your quest.

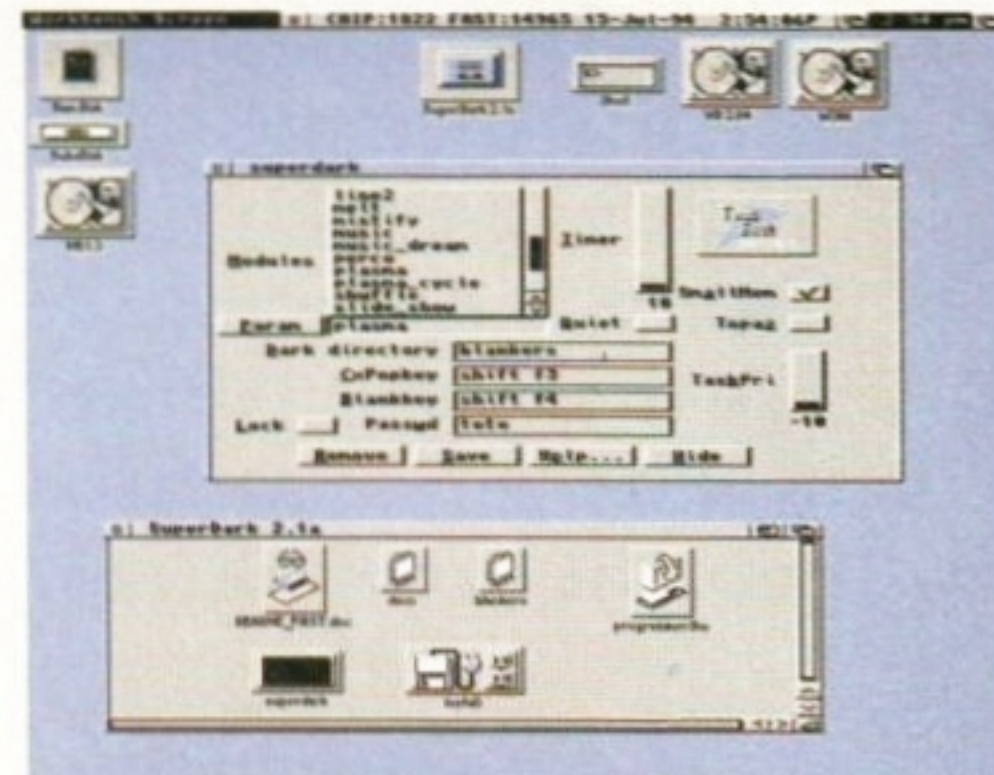

It never fails to surprise me just how popular screen blankers have become recently. On the

Macintosh and the PC, for example, it is possible to buy a screen blanker that covers just about every subject – *Star Trek*, *Jurassic Park* and so on. One of the most popular Macintosh screen blankers around is *AfterDark*, a swish little utility that gives you the choice of a bewildering range of blanking effects. Not surprisingly, *SuperDark* (Kew II disk U1106) is based heavily on that Mac classic.

**Once SuperDark is** installed on your hard disk (it's a big package so it's impractical on a floppy-based system), it can be placed into your WBStartup drawer and forgotten. Whenever you reboot, *SuperDark* automatically loads and runs. If you're not happy with the default blanking pattern, a hot key brings the *SuperDark* window into view. From here you can adjust the blanking period (how soon the screen should be blanked once you stop using your Amiga), and even choose one of a huge selection of blanking effects. Like *Maxon Magic* reviewed last issue, *SuperDark* has all of the usual effects including starfields, cycling plasma, flying toasters, bouncing lines, and many more unique effects.

*SuperDark* isn't up to the same standards as either *AfterDark* on the Mac or even *Maxon Magic* on the Amiga but it's getting there. With a little more development, *SuperDark* should rival even its PC and Mac counterparts. Highly recommended.

Williams' classic *Defender* is brought bang up-

**SUPERDARK:** Screen blankers have progressed since the official Commodore one was bundled with Workbench.

**BOMBER 2000:** Despite the impressive visuals, *Bomber 2000* offers a maximum overload of *Defender* action.

to-date in *Bomber 2000* (Choice Software disk G304), a highly playable space romp boasting very impressive graphics and some stunning audio effects. Possibly the most impressive aspect of the game, however, is its gorgeous 12-plane parallax scrolling which creates a gob-smacking illusion of depth.

Despite the visuals, the gameplay is almost identical to *Defender* although it has to be said that *Bomber 2000* doesn't quite manage to achieve the same feverish atmosphere as the original. The idea is to fly a well-armed spacecraft through levels of arcade action, blasting hordes of alien spacecraft that are trying to abduct the human inhabitants of the planet you've been assigned to protect. Gripping stuff. If you destroy an alien that is carrying an unfortunate human, the victim is dropped. You then have to zoom in, pick up the human and return them to the ground. Fail to do so and your hapless inhabitant will become a scarlet splodge on the surface below.

## TOP 10 GAMES AND UTILITIES

Every month we peruse the bestseller lists of a prominent PD company. This month, it's the turn of:

**ESSEX SOFTWARE SYSTEMS**  
**0621 778778**

1	Sentinal	CLG56
2	Crystal Skull	CLG42
3	Invoice Master	CLU21
4	UK Post and Phone Codes	HOR03
5	SuperSound 4.7	CLU06
6	Dream Stream	CLG57
7	National Hunt	CLG54
8	Stock Controller	CLU14
9	Archipelagos Campaign	CLG46
10	Arco ARexx Compiler	CLU40

## WHERE TO GET THE DISKS IN THIS ISSUE

**CYNOSTIC PD**, Office 01, Little Heath Industrial Estate, Old Church Road, Coventry.  
Tel: 0203 681687.

**New Prices, New look advert, New CDROMs, New Software.**

## AMINET 3 CDROM

£19.99 or £29.99 for two copies  
It's here the latest collection of software from the Amintet system. Direct from the makers this time. Better than ever before. Buy 10 copies at Trade prices. \*PRE-ORDER Vol 4 before its release for £16.99 charged on day of release which is during Dec/Jan 94/95.

## Fonts & Clipart £19.99 The Professional CD

How about every single font we have ever produced! on one CD that over 4,000 Adobe type 1 files, 188 Computer Graphics, 1,500 TrueType Fonts, Prodraw Fonts, IFF Mono and Colour fonts, Pro Page II Fonts, Page Setter II Fonts, Also contains a wide selection of new clipart Over 5,000 PCX files, 300 GIF files, 1,000EPS Format, and 2,379 TIFF files.

## SPECTRUM Emulator v2.0

If you want to run your old spectrum software on the Amiga then this is for you. Superfast on A1200s and A4000s (2)

## MEGALOSOUND

Now convert your tape games to Amiga disk format with Megalosound. Only £37.99 for both.

## PC TASK v2.0

New Price £34.99  
PC Task! It allows you to run the majority of PC Programs. Transfer of files. Runs 500 to 4000, Up to 2 drives & hard drives, Supports CGA, EGA, VGA, Mouse, CD-ROM, and more.

This is best price anywhere around.

## COMMODORE64 Emulator (v3.0)

T1000 Full Registered version £54.99  
T3000 (T1000+Megalosound) £79.99  
T4000 (T2000+Megalosound) £54.99

REPLACE YOUR C64. The interface itself connects your Commodore 64 disc drive to the Amiga for direct loading or file transfer. Software will completely emulate a C64. Load & play software which works just as fast as the original

## modules for use with the famous Octamed

like CDTV Player v2.2, PlayCDDA, ReadCDTV, V1313 GBLANKER V2.7  
Is a complete modular screen blanker package designed with DOS 2.04 or better in mind. 14 Different Blankers and a message system. V1318 (AGA) SWEVERE  
Is a selection of images for use as backgrounds all are in maximum overscan for best results. V1319 MAXIFLIFE  
Enable you to take complete control over your finances. SPENDWIZ is a tool to assist you in maximising your return from your outgoing.

## like CDTV Player v2.2, PlayCDDA, ReadCDTV, V1313 GBLANKER V2.7

Is a complete modular screen blanker package designed with DOS 2.04 or better in mind. 14 Different Blankers and a message system. V1318 (AGA) SWEVERE

## EDUCATIONAL DISKS

### V792 KIDS GAMES

Geography Math, Science and Word Games.

### V793 AMIGA BEGINNER

You asked for it! Tutorial for the beginner!

### V849 LANGUAGE TUTOR

Spanish, French, German & Italian.

### V908 DPAINT TUTOR

Do you have DPaint. The learn how to use it.

### V927 CLI TUTOR

Helpful to understand how to use CLI & Shell

### V933 GCSE MATHS

Program to help with the GCSE maths course

### V1327 FRENCH TESTER

Program to help with the French test course

### V901 EYE OF BEHOLDER

Book with Maps, Strategy & Solider.

### V332 AMIGA PUNT

Will try & Predict which horse will win races.

### V350 BUSIN CARD MAKER

Design your own Business cards.

### V366 600 BUSINESS LETTERS

Over 600 Standard Business letters.

### V390 D.TOP PUBLISHING

Features like text & Graphics Editors

### V401 WINDOWBENCH

Give your Workbench a v3.3 stunning new look and update your aging software.

### V424 ANTI-FLICKER

Said to stop the flicker in High Res mode

### V489 AMIBASE PRO II

v1.8 is most popular PD Database program.

### V490 MESSY SID V2.0

Reads MS-Dos disks. Transfer any text files to & from an IBM PC, is PC to Amiga

### V523 DICE C COMPILER

Matthew Dillons full featured powerful C compiler & environment system. Complete C language (2)

### V536 CATALOGUES

A collection of utilities used to Catalog all your disks! Video tapes and audio tape collections (2)

### V575 HOME BUSINESS

Based on word processing, Data Management, Spreadsheets, Accounts & Printing. (6)

### V583 ICON EDITOR III

v2.0 Create icons upto 640x200. Edit or Create

### V662 DCOPI V3.1 PRO

You can select the speed of the disk drive, Copy modes, Dos, Nibcopy, Ver & safecopy

### V678 DRAW MAP v4.1

You can generate world maps in detail views. 3d or 2d or 2Mb (2) or 1Mb V263

### V681 GAME TAMER v4.59

Get a hold of that extra hard game with a cheat

### V685 ASTRO ASTROLOGY

(v3.5c) Best Astrology program on the Amiga

### V690 WB 2/3 UTILITES

Contains the programs that should have been with WB 2.x Take full advantage of the many NEW capabilities that are available. (2)

### V719 FREECOPY v1.8

Removes protected games copy protection so that the user can install them on HD.

### V691 PROCMANUAL v3.0

Is the largest collection of utilities, documents & examples for C. It consists of six manuals, with over 40 chapters (5)

### V761 A-GENE v4.18

The most popular genealogy database program.

### V782 FORMS UNLIMITED

Create, Edit, Draw, Colour & print your own.

### V783 PROGR. TOOLBOX

Many programs to help in your development efforts (most C but some in basic).

### V784 AREXX PROGRAMS

Selection of programs & finished examples (2)

### V786 PASCAL

Everything needed to program in Pascal.

### V787 PROGR. TOOLS

GoodTools to design your user interface to

## your own programs using all of DOS 2.0+

### V794 GRINDER

Complete graphics conversion package that supports GIF, JPEG, Atari ST, PCX, Targa, TIFF, Ham-IL and IFF Formats

### V799 ADVANCED UTILS

SetNet & ParNet, Connect 2 Amiga & share resources via serial or Parallel ports. MyMem

### V811 ELECTROCAD

(v1.42) Electronics drawing Programs.

### V817 A500P EMULATOR

As it sounds will let v1.3/v1.2 owners run WB v2.x software WITH-OUT any need to purchase the Workbench v2.x chips.

### V821 SNOOPDOS v1.5

Monitors Dos calls to see what library, devices, fonts are required if a program won't load

### V827 REPAIR-IT 2

NewZip v3.3, Sector file error. FIXDISK v1.2. Recover as much as possible from defective disk

### V841 MODULA-2

Contains modula-2 language on the Amiga.

### V858 MUSIC MAKERS

Programs to produce your own music productions.

### V865 IMAGE PROCESSOR

Tools to perform wide variety of image techniques

### V866 MANDEL EXPLORER

collection of Fractal Generating utilities (2)

### V888 TRONI CAD v1.36

its the best Computer Aided Design program with excellent power functions for all users.

### V899 BACK-IT UP

Newly updated disk which contains ABackup v4.03 A powerful backup utility that may be used for Hard Drive backup and File Archiving; it also contains SysInfo v1.21 + BackUp v1.41

### V928 THE LITTLE OFFICE

Has a Word Processor and others programs to aid a small business or company.

### V942 SCREEN BLANKERS

A disk packed with screen blankers. Includes the Twilight Zone blanker along with 10 others

### V943 LYAPONOVIA v1.5

Mind-bogglingly colourful program that makes pictures from a mathematical formula.

### V946 SYSTEM OPTIMIZER

Kommodoty gives you memory metrics. REorg will optimize hard, floppy disks for speed increase. HDMMem virtual mem. 2Mb for 2Mb HD space

### V949 TESTS

Contains all of the classic speed tests and system checks we could find. Includes CPU Speed and system diagnostic tool

### V951 PROTECTION

is a collection of utilities aimed to protect your data and authoring of HDs & Documents.

### V958 CLUB LEAGUE (K)

Allow you to edit and keep track of your divisions/leagues starts within a club league

### V962 SUPER KILLERS V5.5

The latest Virus Killers like BootX, Virus Checker v6.41 and the new release of VirusX II v1.3 kill those nasty trojans & virus's. (2)

### V979 NCMM V3.2k

Is a comm-unications program based on Comm v1.34 with lots of very nice enhancements

### V980 KICK V1.4

Will down grade your A500+, A600 or AGA machines to run all that old software that you NOT normally work. Turns them into a K5.1.3

### V983 MEGA CHEATS v3.0c

Now contains over 800 cheats.

### V1005 AGA UTILS

The first batch of AGA utilities for WB 3.0 users

### V1009 TURBO TEXT v1.1

Excellent Word Processor. Very impressive

### V1013 POOLS PREDICTION

Need a helping hand to win the Pools.

### V1017 POST v1.86

An excellent Postscript interpreter for the Amiga which implements the full Adobe language (3)

### V1021 (AGA) SCREENS

Enhance your Workbench disks with backgrounds like these. All pictures in full AGA colour.

### V1022 LITTLE TRAVELLER

(v1.1) Shows a world map. You can select any country for travel information. Zooms up another map with detail.

### V1025 TERM v4.0

Communications program with XPR transfer, point-click, auto upload/download. VT102/VT-220. Ansi emulation, powerful phone book (3)

### V1037 (AGA) WB HACKS

An excellent collection of Utilities & Hacks

### V1039 HARD DISK INSTALL

If you need to install your A1200 HD then you need this set of disks which can do a low-level format and then install Workbench 3.0 (2)

### V1040 bBASE III v1.4

Anyeasy to use, versatile, yet full featured database. Greatly enhanced and a successor to bBASE II

### V1041 DIGITAL B.B.OARD

Full featured digital circuit simulator

### V1043 SUPER DARK v2.04

A screen blanker like After Dark from the MAC

### V1044 FANCY PRINTING

Banner, Graph Paper v1.2 and Disk Print v3.59

### V1045 uDRAW v1.0

Rapid drawing of schematic diagrams.

### V1051 EASY CALC PLUS

A spread sheet designed to be both easy to use and fast. Built in excellent help system.

### V1054 ADVANCED UTILS 2

CDisk doubles the capacity of your PD on the fly with compressions. Disk Optimizer. SCSI Mount

### V1055 PARBENCH

Software to hook up 2 Amiga's or CDTV's.

### V1056 DEVELOPER

The official Commodore developers Kit for the Amiga. Amiga Guide & install utilities.

### V1060 BOARD DESIGN

## Includes mCAD v1.26 and several terrific routines for the electronic enthusiast.

### V1069 PRINTER DRIVERS

Desk-jet 550c, 500, 500c, Ricoh HP1200, Canon BJ300, 130, LPB, Ito, HP1080 HP Paintjet.

### V1074 (AGA) UTILS 3

256 colour icon editor, Plasma256, QuickGrab

### V1074 (AGA) UTILS 3

Collection of AGA Based utilities. Includes Kill AGA which allows you to run old badly written programs including demos & some games

### V1077 GENEALOGIST

(v1.04) Is a specialized database for keeping track of genealogical information. Full featured

### V1079 KEYBOARD TRAINER

Best Practice Domain Typing Tutor.

### V1081 REPAIR-IT 3

Contains a selection of Disk, Hard Drive repairing and file saving utilities for the Amiga.

### V1090 ANDYS (AGA) UTILS

Selection of utilities for A1200 systems also includes FakeMem, KillAGI, AGA2Net, Degradr

### V1091 ASTRONOMY v2.1

Calculates information about the Sun, Moon, Planets and Constellations.

### V1093 PARNET SET-UP

A two way network file system between two parallel ports, establish via two amigas. (2)

### V1095 THE DEGRADERS

Is a HD recording system with many features. Will print invoices onto your letterheads. Much sort after. Ideally suited to a small business.

### V1096 CHINESE ASTROLOGY

Will create a horoscope in seconds, not hours

### V1104 COLOURED ICONS

Transfer your disks into colourful well presented works of art with this database of excellent icons

### V1109 STAR VIEW

Is designed to show graphically the positions of the stars and planets from any point on Earth.

### V1110 FORCASTER v2.01b

Is a Horse Racing prediction program which uses statistical analysis of Major factors.

### V1112 CHEQUE BOOK v2.5

Record your bank and other transactions.

### V1114 PRINT LABELS

DocDump1.1, Envelope Print v1.2, Inlay Maker v1.4, MC master v1.1, Banner Press, Label Print

### V1116 POOLS WIZARD JNR

Dead-accat Amiga Football Pools predictor.

### V1129 RED DRAWF TRIVIA

The ultimate Quiz and answers game.

### V1130 COMMUNICATE v1.2

A helping tool for learning one of the formats of communications or languages. & Morecode.

### V1134 TOOLMANAGER v2.1

Includes the ability to add menus to your Tools menu, add WB icons or Windows. (2)

## NEW TITLES

G332 DRELBS - Based on the Commodore 64 arcade game of the same name.  
G333 SILVER BLADE - Helicopter shoot-em-up, Defender style.  
G334 PROJECT BUZZBAR - Multi-directional overhead space shoot-em-up over the moon.  
E84-E85 (2 DISKS) TREASURES OF TUTANKHAMUN - Slideshow and short history lesson of the treasures of King Tut.  
\*A1200 ONLY\*  
D201-D202 QED II - Great follow up demo from Talent.  
\*A1200 ONLY\*  
G335 ART CARDS - Another set of cards for Deluxe Klondike. Famous paintings and sculptures. \*A1200 ONLY\*  
G336 FACES CARDS - Card set for Deluxe Klondike. Real and imaginary people. \*A1200 ONLY\*  
G337 BOBS GARDEN & DIGGER - Great clones of Mr Do and DIG DUG. Remember them in the arcades!!!!  
U421 GOLF SCORE ANALYSER v1.84 - Database to record and analyse your golf scores.  
E86 KIDS DTP 2 v2.6 - Cut down version of this brilliant kids multimedia package. Shareware.  
E87 KIDS DTP 4 - Book reader for projects constructed with the KIDS DTP.  
E88 KIDS DTP EXTRAS - Fonts, picture brushes etc.. for use with the KIDS DTP.  
G338 MADFIGHTERS - PD version of this AGA beat-em-up. Several different characters to pick from. \*A1200 ONLY\*  
G339 DEFENDER - Faithful to the arcade coin-op. Amazing!!  
U422 A1200 HACKS - Loads of interesting Workbench hacks. \*NOT A500\*  
U423 XBEAT PRO - Computerised drum kit software. Load through Workbench for documents.  
U424 SIRS - Random dot stereo program. Creates those strange 3D images from pictures.  
U425 WORD UTILITIES - A word spell checker, Anagram solver, word finder, and crossword helper all in a single programme.  
E89 THE IRREGULAR VERB QUIZ - Test your knowledge of verbs.  
T65-T66 (2 DISKS) PARANORMAL INVESTIGATIONS PT 1 - Strange and weird stories about UFO's, sea monsters, reincarnation, and disasters. \*NOT A500\*  
U426 TELETEXT v1.20 - DIY project on how to make your Amiga read the teletext signals. \*NOT A500\*  
D203 MINA OMISTAN - A music video on a disk. \*A1200 ONLY\*  
G340 OVERLANDER - Moon buggy clone. A game from yesteryear.  
G341 KUNGFU CHARLIES - Martial arts platform game for one or two players.  
U427 EPOCH MASTER V3.0 - Shareware diary, calendar, note book, time/date planner and simple accounts package all in one neat package. \*NOT A500\*  
S121 BEACH BABES 1 - Glamour pictures in 256 colours. \*A1200 ONLY\*  
S122 BEACH BABES 2 - As above. \*A1200 ONLY\*  
S123 BEACH BABES 3 - As above. \*A1200 ONLY\*  
S124 BEACH BABES 4 - As above. \*A1200 ONLY\*  
S125 BEACH BABES 5 - As above. \*A1200 ONLY\*

## CLASSIC LITERATURE

Complete books on disk.

## UTILITIES

U291 RELOKICK 1.4 - Downgrades Kickstart 2 & 3 to Kickstart 1.3 to aid in compatibility problems.  
U301 A-REXX MANUAL - Extensive manual on the A-ReXX programming language.  
U294 POOLS TOOLS - Football pools predictor.  
U323 FOOTY - Football league database. Presents various types of statistics, plus match predictions.  
U293 PARBENCH - Amiga networking software.  
U350 TERMINUS 2.0d - Modern software.  
U302 NCOMM 3.0 - Latest version of this incredibly popular communications package.  
U383 SPECTRUM EMULATOR V1.7 - Run Spectrum games on your Amiga. Load in software via a sampler. Games can then be saved to disk.  
U103 MESSYSID II - Transfer files to and from Amiga DOS and PC MS-DOS disks.  
U369-370 (2 DISKS) SCALA BACKGROUNDS - Hi-res backdrops for use with Scala.  
U342 SUPER LEAGUE 3.40 - Fully configurable Football league database. Loads of features.  
U404 GURU - Tells you what those errors are.  
U402 AMIGA GUIDE TO COMMS - Everything you could ever want to know about Modern communications. Very well written. \*NOT A500\*  
U375 BBC EMULATOR - Run BBC software on this great emulator. \*NOT A1200\*  
U382 PRINTER DRIVERS - One hundred and ten printer drivers for most printer makes and models. Give us ring to see if your printer is supported.  
U318 BLITZ BLANKER - Screen blanker with loads of novelty blanker modules. \*NOT A500\*  
U407 VIDEO TRACKER - Create impressive demos with no programming knowledge.  
U415 FORCASTER - Horsing racing predictor.  
U419 LECED/LECAM - Assembly programming language - editor and compiler. All set up.  
U417 1200 HARD DRIVE SET UP DISK - Formatting and partitioning software for all A1200 Hard drive owners.

## ZAPPO SMART STOR

A convenient portable mini hard drive that plugs into the PCMCIA slot on the A600 and A1200. Requires no external power supply. Phone for further details.

20 MB VERSION - £149.99  
30 MB VERSION - £179.99

## GAMES

G273-274 (2 DISKS) STARBASE 13 - Sci Fi graphic adventure. Interface similar to Monkey Island.  
G222 CHESS GAMES - GNU Chess. \*NOT A500\* and Chess 2.0 (for all Amiga's).  
G280 BLACK DAWN - 3D perspective dungeon game with an Alien Breed scenario.

## ADOBE TYPE 1 FONTS

High quality Adobe fonts for DTP and WP.  
Disk Refs: U428, U429, U430, U431, U432, U433.

"The last time I used your company you were very quick and efficient. Also your disks are so much cheaper compared with most other companies and there is so much choice".  
M.Smith (Kent)

"I thought the catalogue disk was excellent value for the way so many of the disks have been individually reviewed".  
V.Maher (Essex)

Check out our comprehensive catalogue disks for the very best PD/Shareware. Updated monthly.

## EDUCATIONAL

E52 COLOUR THE ALPHABET 2 - For infants.

Join Steve McGill as he takes another extended trip through the kaleidoscopically exalted masterjam of creativity that is the *Amiga Format* PD Demo Zone.

# PD Demo Zone

**LOVE:** A top techy coder type demo this one. It doesn't get in yer face too much though. The individual sequences don't last long either.

**NEVER LIKED UNO:** One of the best front ends for a picture show – maybe some day all slide shows will be made this way. Here's hoping.

**PLEASE RELEASE ME:** If you want to create your own lip-syncing animations, study this lovely production from Iain B McCaffrey.

Let's face it, slide-shows probably represent the translucent fossilised plant resin of the demo scene, but some of them are capable of raising a little more than a stifled yawn.

One such slide show is: *Never Liked Uno* (Cynostics). Slickly presented and professionally executed gigantic thumbnails of the main pics run along (from left to right) within a side-scrolling film strip. It gives you the option of having it automatically run through all 24 pics in a linear, Armitage Shanks-standard, slide-show fashion.

Some of the images used have been seen in fantasy art books for what seems like aeons. Others exhibit a sucrose encrusted imagery with the carbohydrate energy-packing will-power to suck the sugar from a fruit pastille without chewing.

**Another favourite among** the super-information highway Internet cyber surfing techno-warriors is *Love* (Freestyle PD). There are a few effects on this one, such as the zooming rotating fractalised imagery, which are very, very difficult to code.

Forgive me for remaining indifferent to the whole spectacle. While there's no denying that the maths involved are complex, sophisticated and incredibly awkward to implement, it looks like what it is – a spinning Mandelbrot fractal – an image seen so often elsewhere that it no longer carries any special significance, even if it is moving in real time.

The music, again, is technically proficient. Listening through headphones lacks the usual aural pain inflicted by non-panned stereo. But its strength is undermined because it isn't married to the imagery in any significant manner – reducing it to the subservient role of sonic wallpaper. Which is a shame really as the music is pretty funky.

The winner's accolades this month go to two separate animations by the same individual – Iain

B McCaffrey. The heart-warming aspect of all of these anims is that they were created using *Moviesetter* and *Deluxe Paint IV*. So there's hope for us all. The first of the anims is: *The High Spot Funky Dancer* (Telescan Computer Services). The intro screen informs us that some people like maths, art and music. Others, however, prefer to run very fast and dance about on high places.

**Funky Dancer follows** the exploits of one of the latter, more athletic people. The music is minimal, as are the spot sound effects. But these are only picky points. The timing, the action, the narrative and the use of technical cuts and events, such as close ups and zooms, are accomplished. They carry the story and endear the central protagonist to the viewer.

The plot even has a clever twist at the end. But we don't want to spoil your fun so we'll leave that for you to discover. Inspiration for everyone.

More impressive, sonically at least, is the other anim of the review duo: *Please Release Me*

**THE HIGH SPOT FUNKY DANCER:** Not the funniest work exhibited by Mr McCaffrey. Nevertheless, this creation has pace, narrative and style.

(Telescan). A perfect parody of the Englebert Humperdink ballad *Please Release Me*, it features the best lip sync that you're ever likely to find in the Demo Zone – and the twist at the end raised a hearty chuckle. Take this one home and study it. Then earn yourself prestige points through the pages of the Demo Zone by bettering it. See you next month.

## TOP 10 DEMOS

The kind supplier of this month's top 10 demo chart is:

**17 BIT SOFTWARE**  
0924 366982

1. Artificial Paradise	3194 (AB)

- DP17 **CRACK N COPY AGA**

**ESSENTIAL FOR BEGINNERS**  
If you are just starting to purchase PD software, then this disk is essential. It contains everything you should need to get the most from the Public Domain. Includes easy to use Text/Document viewer, a degrader so you can run incompatible software on the A1200. A file manager is also included so you can easily copy, move delete files from your disks, all the most common libraries can also be found in this collection, so you'll never get those annoying "XXX library not found" messages. A host of other essential tools to make your life a little easier are also included (A500+/A600/A1200)  
Order code ☐ EFB2-1  
ONLY £2.00 with any purchase

## Priority Order Form (AF)

Name \_\_\_\_\_  
Address \_\_\_\_\_  
Tel: \_\_\_\_\_  
Amiga model \_\_\_\_\_ Payment \_\_\_\_\_  
Credit Card No. \_\_\_\_\_  
Exp \_\_\_\_\_  
1234-3. TITLEXXX = 3 disks

**Ordering by Post**  
Simply send us a written order with a list of the disks you require, or simply tick the boxes of the titles you require. Fill in your name & address, remove or photocopy this page and send it along with full payment to:  
VIRUS FREE PD, 138-139 Victoria Road, Swindon, Wilts SN1 3BU

**Collecting Disks**  
PD disks can be collected same day, but if your order is quite large, please phone in a few hours previous to pickup.

**Overseas Orders**  
Overseas orders are welcome, but please add 25p for each disk ordered, a minimum of 5 disks applies.

**Postage and Packing**  
Please add a total of 50p to your order if in the UK. Overseas please add 25p to each title and £1 to each pack ordered for 1st class delivery.

**Compatibility**  
All titles advertised should work on any Amiga unless stated. AGA means that it only works on A1200/A4000. KS2/3 means that title requires an A500+/A600/A1200.

**Ordering by phone**  
To place an order over the phone simply call any time between 9.30 & 5.30pm Monday to Saturday with your credit card details and the disks you would like to order.  
(Orders can usually be placed up to 7pm every evening.)

## A FEW TOOLS

# It's Crucial...

## 1 ZAPPO CD DRIVE

Launches the Amiga 1200 into the world of CD Technology. Utilising a double speed multi-session CD ROM Drive, the Zappo Drive will play CD 32, CDTV and Audio Software.

"The level of software compatibility that has been achieved is very impressive....Whatever your CD ROM needs the Zappo Drive can handle it" **Amiga Format**

"It is rare to come across a product that's reasonably priced...does the job well and has no major faults... More stunning than a phaser gun in Star Trek. A must have product for A1200 owners." **CU Amiga**

"The main contender for best A1200 peripheral of the year." **Amiga Pro**

"This is the product that all A1200 users have been waiting for." **Amiga Shopper**  
**£199.99**

## ...Amiga Gear

### 2 ZAPPO SMART STOR PLUS

Fits neatly alongside your A600 or A1200 the superfast Smart Stor Plus offers hard drive capacities from 130 Mb upto 340Mb.

"There's the Smart Stor Plus a slightly modified version of the Smart Stor that makes use of the larger 3.5" IDE drives that are often used by PC compatibles...the fact that it uses the larger 3.5 inch IDE drive means that it can offer higher capacity versions of the Smart Stor Plus at the lowest possible prices" **Amiga Format**

130Mb---£249.99	170Mb---£269.99
250Mb---£294.99	340Mb---£329.99

### 3 ZAPPO SMART STOR

Brings full data portability to the Amiga Market. Small enough to fit in your pocket the Smart Stor simply connects to the PCMCIA slot of your Amiga 600 or 1200 and is ready to go.

"The Smart Stor deserves to do very well indeed, if your hard drive needs aren't that demanding then the Smart Stor is a genuine Godsend... very good value indeed" **Amiga Format**

20Mb---£139.99 30Mb---£169.99

### 4 ZAPPO 3.5" EXTERNAL FLOPPY DRIVE

This best selling Drive has an enviable reputation for both reliability and performance and of course is compatible with all Amigas.

"Quality 9 out of 10, exceptional value for money"

**Amiga Computing**  
**£54.99**

## AMOS MANUAL

If you want to get the most out of *AMOS The Creator*, you need this complete manual, which includes an Extras disk with all the example programs we couldn't fit on the AF42 AMOS Coverdisk. This is an essential guide for programmers who want to make their AMOS work more creative!

Description	AMOS Manual
AF price	£13.95
Order code	AF249

# DATEL DIRECT

**ADD A PROFESSIONAL TOUCH TO YOUR DRAWING WORK**

**GENIUS DIGITIZING TABLET**

**NOW ONLY  
£129.99**

- With the Amiga Genitizer Graphic Tablet you can streamline the operation of most graphic or CAD programs.
- The Genitizer Graphic Tablet utilises latest technology to offer up to 1000 dpi resolution at the tip of a stylus.
- Complete 9"x6" digitizing area plus super accurate stylus combine to enable fast, accurate and easy control.
- Works by "mouse emulation" so the Genitizer will work with most packages where mouse input is the usual method-Deluxe Paint, Photon Paint, CAD Packages, etc.
- Supplied with template for Deluxe Paint.
- Full easy to follow instructions.
- This is the input method used on professional systems-now you can add a new dimension to graphics/cad.
- Fast input of drawing by "tracing" is made easy - plus "absolute reference" means you can move around the screen many times faster than by a mouse.
- The Genitizer fits in the serial port of your Amiga 500/500+/600/1200/1500/2000 and "co-exists" with mouse.

- Unlike a mouse, the tablet gives absolute co-ordinates so that tracking and menu selections are possible from the tablet face.
- A pressure sensitive switch built into the stylus tip activates the Tablet overriding the normal mouse input. When you are not using the Tablet, you have normal mouse control.
- Complete system - Graphics Digitizer Tablet, Stylus, Deluxe Paint Template, Power Adaptor, Test Software, Interface Unit, plus Driver Program - no more to buy!

**AS AN ALTERNATIVE TO THE STYLUS INPUT THE GENIUS TABLET ALSO HAS AN OPTIONAL FOUR BUTTON PUCK. IDEAL FOR TRACING ETC.**

**£29.99**

**GENIUS PUCK**

## VIDEO DIGITIZER

**£99.99**

A full Realtime colour Digitizer at a realistic price. A500/A500+ compatible. Grab 15 Bit colour image in 1/50 second. Double buffered display generates screen update at 5 frames per second. 24 bit IFF file save from 15 bit data. Advanced picture editing features including cut, copy, brush, paste, undo etc. etc. Palette controls include R.G.B. level and Gamma correction. Standard Phono Video Input (0.5 to 2.0v) composite from Video Recorder/Camera etc. Total package no more to buy.

**MONO VERSION OF REALTIME VIDEO DIGITIZER NOW ONLY £49.99**

## HIGH RESOLUTION HANDY SCANNER

**NOW ONLY £89.99**

**FREE  
PHOTON  
PAINT**

- An easy to handle Scanner featuring 105 mm scanning width & 400 dpi resolution enables you to scan graphics/text into your Amiga 500/500+/600/1200/1500/2000.
- Unlimited edit/capture facilities & keyboard control not offered by other scanners at this special price.
- Full keyboard control of most functions.
- Includes hard disk transfer to run under Workbench.
- Adjustable switches for brightness/contrast levels.
- Full sizing menu of scan area.
- Geniscan gives you the ability to scan images, text or graphics & even offers 200 Dpi Dual Scan Mode.
- IFF Buffer Save 1600x1024 pixels, dual buffer, scan matching & view Buffer.
- Scan Grey Software included to convert half tone images to true Grey scales. Includes editing, zoom & processing features.
- Screen grid overlay & configure menu to save parameters.
- Icon menu to select functions.
- X,Y position readout & metric sizes.
- Save images in suitable format for most leading packages including PHOTON PAINT, DELUXE PAINT, etc.
- View window and position control panel.
- Powerful partner for DTP that allows for cut & paste editing of images etc.

## 8 BIT SOUND SAMPLER

**8 BIT SOUND SAMPLER £14.99**

Full 8 Bit Sound Sampling System. For A500/1500/2000/1200. Fits into Printer Port. Complete Hardware/Software package including Sound Sampler and Sound Jammer Software.

## INTERNAL MIDI CARD

**INTERNAL MIDI CARD FOR A2000/1500/3000 £19.99**

Full feature Midi Interface - Midi In, Midi Thru and Three Midi out sockets. Opto Isolated. Complete with 2 Free Midi Cables.

# WorkBENCH

A problem shared is a problem in Nick Veitch's in tray. If you are baffled, bamboozled, bemused or bewildered by an Amiga-related worry then tell Nick all about it. Send your letters to: Workbench, Amiga Format, 30 Monmouth St, Bath, Avon BA1 2BW.

The way the clock is synchronised can cause problems when using a Rocgen with an A1200.

## NOT GENNED UP

I recently bought an A1200 only to find that it's not compatible with my Rocgen Plus. Is there any kind of add-on or special chip to make it compatible or will I have to sell it and buy another Rocgen?

Does the Rocgen Rockey plug into the A1200 and the Rocgen Plus plug into the Rockey? If so would that work with the Rocgen I've got? If not, are there any companies which will part exchange my Rocgen for a new one?

I've tried phoning Rocgen in Hong Kong but the number I was given by Silick (who were most helpful) is discontinued.

WS Callaghan, Britannia Inn, Llangollen

## GET YOURSELF CONNECTED

Please could you send me any info you have on decent but cheap modems compatible with the A500+. And please could you give me the phone numbers of any Bulletin Boards for the Amiga. Now a few questions:

- 1) How much do modems cost to run?
- 2) Do you have to pay subscription fees for Bulletin Boards and the Internet?
- 3) Is there much use for a modem on the Amiga?

GJ Hamilton, Ottery St Mary, Devon

When you are running a modem, the thing that costs you money is the connection time. The phone bill is your main expense, and if you are a member of a subscription service (such as CiX or CompuServe) you may have to pay another £2 per hour for on-line charges.

Buying the cheapest modem is often a false economy, because the slower speeds mean you are on-line longer. You shouldn't consider anything less than a 2400 baud modem. A 9600 baud one would be good, and these can be found for reasonable amounts of cash. Even 14400 baud modems (V.32 bis) such as the US Robotics Sportster 14400 are only about £150 (First Computer Centre 0532 319444).

Internet is a service that costs you money. To set up an account contact Demon (081-343 3881);

The problem is an incompatibility with the way the clock is synchronised. This will probably still cause a problem when used with a Rockey. There are newer versions of the Rocgen which are not plagued by this problem. Try ringing First Computer Centre, on 0532 319444, to see if they will do a swap for you.

## THE HEAT IS ON

I recently bought a 120Mb hard drive for my Amiga 1200, and to prevent my brother playing on my computer, I got hold of a copy of X-Password from the Public Domain.

Unfortunately, when I am using my Amiga it resets itself every so often. Sometimes after just booting up or after an hour. I have checked all the cables and the power supply, but to no avail. I have reset the start-up sequence and deleted X-Password but I am still faced with this annoying problem.

The hard drive I purchased from Trilogic seems incredibly large and is a tight fit in its casing. Could this problem be a lack of power because of the size of the hard drive? If not, what could be causing this irritating problem?

Paul Corbishley, Macclesfield, Cheshire

It is most likely an overheating problem. It could be the power supply that is overheating, but a lot of chips have heat problems and if the drive takes up a lot of space then there won't be much airflow.

Continued overleaf ➔

## IF YOU HAVE A QUERY...

Nick Veitch

At Amiga Format we aim to answer as many questions as possible, and hopefully to sort out all your problems. Of course there are always more questions than answers, so we have to prioritise queries according to the following factors:

- Frequency. If a lot of people seem to be having problems with their Supersonic KY3000 printers, then we will print one letter and the definitive answer, encompassing all the most frequently posed problems.
- Difficulty. If the problem is actually something which only someone with some insider technical knowledge would be able to solve, it is more likely to be answered in these pages than a problem which arises simply because you haven't read the necessary documentation.
- Impact. Quite simply, a question which involves you not being able to use your machine or some peripheral or software will be given priority over a difficulty which is little more than a slight inconvenience.

Unlike some magazines we won't just concentrate on the areas of expertise we are most familiar with, we will take on any problem (as long as there is an Amiga involved). As you will appreciate, we do get a lot of Workbench questions every month. If you want to get yours noticed, here are a few tips:

### DO

- Be concise.
- Detail the actual problem as best as you can.
- Where applicable, describe the sequence of events that caused the problem.
- Give details of the equipment you are using (including which version of Workbench and which model of Amiga you have).
- Make sure your question is relevant and wouldn't be more easily solved by getting in touch with the dealer from whom you bought the goods.

### DON'T

- Spend three pages telling us about your Aunt Ethel and only then explain your problem.
- Write in with questions such as 'I added a hard drive to my machine and it doesn't work?' (Which machine? Which drive?)
- Send an SAE expecting a personal reply. The chances are extremely slim.

Please bear these points in mind and remember that we are trying our best to help you.

Buying a modem can put you in touch with thousands of Amiga owners all over the world.

Genesis (0232 231622); Pipex (0223 250120); GreenNet (071-608 3040); or Direct Connection (081-317 0100). Or you can get some access through CiX (081-390 8446). The BBC are also in the process of setting up a service.

Connecting your Amiga to a modem can be very rewarding. Not only can you get hold of the latest PD, but you can also swap ideas and programs with thousands of other Amiga users all over the world.

➔ I don't think that the problem with your Amiga lies with *X-Password* at all. It may be best to try to mount the drive externally.

## NOT ALONE

The runtime player is missing from the *ClariSSA* Coverdisk, but we'll bring it to you soon.

Yes!! This is the program that I've needed for ages. What is it? *ClariSSA* of course! I've done an animation using *Imagine* consisting of four separate animations, but I needed a utility to get these together into one big animation. I know such a utility must exist, and I tried out *MainActor* but found the high Shareware fee prohibitive. Thanks then, for an amazing Coverdisk.

However, it appears that the stand-alone player is missing, or at least despite my efforts, I can't find the thing on the disk. What's happened? Also, do ProDAD have a program that plays large SSA animations from hard disk, enabling people with less RAM than animation size to view the animation, much like the PD program *BigAnim*?

Jonathan McBrien, Enniskillen, Fermanagh

You are right. The runtime player was not included, because ProDAD forgot to put it on the

disk! We will include the runtime player when there is enough space available on a future Coverdisk. This will also play animations from disk.

## MAPPING IT OUT

I have a problem installing the GB keypad on my Amiga, I have copied it on to the Workbench and placed it in DEVS/Keymap. I also have *CrossDOS* on Drive Df0: so I can read 720K IBM PC disks.

I have followed all the instructions in the Workbench manual Chapter Five, but with no joy at all. I am using a PD program *Textplus* version 2.2 to check out the keyboard, plus a keyboard test which keeps showing me an American keyboard. Any ideas? At the moment I am pulling my hair out and wishing I bought an IBM 486 PC.

Nigel Rathbone, Quinton, Birmingham

It isn't enough just to put the keyboard in the right place, you have to select it too. The American keypad is the default one, so you actually have to tell the software which one you want to use.

Under Workbench 3, you should set your country to United Kingdom in Locale, and select the British keypad from the input preferences. On older machines, you should add the command `setmap gb` to your startup-sequence.

## A FONT OF KNOWLEDGE

1) Why does the font requester on *Deluxe Paint IV* AGA only show a select few of my Compugraphic fonts? I have 85 fonts in total (on my hard drive), 55 of which are CG fonts.

2) I keep on reading that *Wordworth 2.0* AGA comes with 17 fonts, but my copy (the one included in the Desktop Dynamite pack) only had eight (and four of them are Roman). Why is this?

3) I know using scalable fonts is VERY memory intensive, would a 2Mb Fast RAM expansion help (I only have the standard 2Mb Chip RAM)?

Hayden Scott-Baron, Lymm, Cheshire

1) It is possible that you haven't installed the fonts properly. In order for *DPaint* to access them you

should install them with the Workbench Intellifont utility and create at least one bitmap version of the font. You can choose the size you want from the requester, but you must install at least one bitmap size for *DPaint* to register that the font exists.

2) It may be that there aren't as many fonts supplied with the bundled version for reasons of space. Try calling Digita on 0395 270273.

3) Yes. Although Chip RAM is used to image the fonts, Fast RAM can be used as a data cache and dramatically speeds up nearly all operations on your A1200.

## HISTORIC PROBLEM

Change the options on the boot-up menu you'll be playing *History Line* in next to no time.

In the July issue of *AF* Tim Billyard wrote that he couldn't get *History Line* to work from his hard disk. What he needs to do is select Original Chip Set from the display options boot-up menu. The game then runs properly.

I think I have found a bug in *Wordworth 3.0a*. I was attempting to do double-sided printing on my Canon BS250 by selecting Print Odd Pages Only, turning the paper over selecting and Print Even Pages Only. However, I cannot persuade it to print even pages only, it just reprints the odd pages on the back. Help!

Do Digita have a contact number or E-mail address? I don't see why I should pay 36 pence a minute to tell them that they have fouled up.

Richard Pickwick, Gideon Park, Romford

Thanks for the *History Line* tip. I sent your problem on to Digita, and they are having a look at it. If you want to check on how they are getting on, their number is 0395 270273.

## PICTURELESS

Please, please help me. I have owned an A1200 for six months and can't fault it. The problem is when I try to video record my animations - it just doesn't record anything.

I've tuned the Amiga so I have a picture running through the video to the TV monitor, then I tuned the video but still nothing. I have tried the RF socket, comp socket and the video port, but still nothing. I've been told that I might need an RF modulator but it's got one built in hasn't it? Is there any hardware I need? Or is it just me? Please help me I haven't much hair left.

John, Northallerton, N Yorks

There seems to be quite a lot of hair loss going on at the moment. I'm not sure exactly what your problem is, but:

- If you have a video recorder with a composite input, you should connect it to the yellow phono socket on the back of the A1200. You may need to select the external video source using a special switch on your VCR.

- You can attach the RF lead to the aerial socket of your VCR and tune in the Amiga, in the same

## PAUSE FOR THOUGHT

The problem I am having concerns genlocking with my equipment.

The equipment I have is:

A1200 with GVP series II accelerator with 8Mb Fast RAM, GVP series G-Lock, Sony SLV 815 Nicam VCR, Sony H18 EVC500 VCR.

While recording normally or overlaying graphics everything works all right. However, if I put the input VCR into Pause Frame, my picture through the G-Lock is distorted in the top quarter of the picture.

With the G-Lock disconnected and the two VCRs coupled together directly, the picture and pause frame recording is fine. Is there anything that I can do or buy to improve the pause frame through the G-Lock, because I need to record still frames while still genlocking?

D Smith, Selby, N Yorks

There is nothing wrong with the G-Lock, or the way you have hooked everything up. The sad truth is that the pause frame on all but the very best (and I'm talking broadcast quality here) video recorders do not give a regular, stable synching signal. This is all right if you are just recording to another tape, because a frame slipping slightly probably won't be noticed, but the genlock tries to synchronise the signal with

If you're having genlock problems it could be your video recorder that's at fault, not your genlock.

the graphics signal from the Amiga and it can't do that without a reasonable synching signal.

If you want to record still frames and overlay graphics, why not get a digitiser such as Rombo's Vidi or MacroSystem's V-LabPar? Then you could grab the still frames you want and overlay graphics in *DPaint* or *ADpro* and record direct from the Amiga - you would also get better quality results.

way that you tune in a TV channel. The Amiga is usually at about channel 36 on the UHF band, which may be near where your video is located. If this is the case, you can adjust the Amiga signal's frequency by twiddling with the little screw next to the RF output.

## CLEAR DISKS

I read with interest a letter from one of your readers in Workbench (AF60) concerning clear disks. You said that you didn't know of anyone selling them separately. Well, we now sell them and they are priced as follows:

Yellow, Green, Blue or Red: 40p each.

Unbranded - DS-DD all colours: 35p

DS-HD - all colours: 35p

There are reductions on the above prices if you buy the disks in bulk.

Byte Computer Supplies, Dorchester  
Tel: (0305) 889280

## WORD POWER

I own an Amiga 500+ and I am starting an A Level English course in which much of the coursework is word processed. I read the reply to J Blair of London's letter in the July issue, concerning the state of the A500 and the AGA graphics now available. I want to make use of these and upgrade from Workbench 2.04 to 3. Is it worth upgrading my present machine to an A1200?

As a footnote, I would like to thank departing editor Marcus Dyson for his great contribution to AF over the past year and a half. Steve Jarratt, keep up very high standards please - even though it is difficult.

Paul Hutchinson, Rudgeway, Bristol

It is always a good idea to upgrade. In the future, you may not be able to run newer versions of your present software, and you will certainly not be able to run them to the same degree of efficiency or performance. Even if you use your Amiga mostly for word processing you are bound to notice the difference between the A500 and the A1200.

## ITALIAN JOB

I ask help for an Italian subscriber! I have got an A1200 170Mb hard disk and no expansion. I used Commodore Install and now I have two partitions, Workbench and Work. I installed many games in Work - all my new and old games with an HD install option, but now I have a few problems.

All the games install properly, and some work well and it is possible to open and play them from hard disk (*Settlers*, *Hired Guns*, *GS2000*, *F117*, *Links*, *Battle Isle*, *A10 TankKiller*). Other games don't work. The install procedure seems OK but when I double click on the *Populous II* icon, it shows a window with the Bullfrog *Populous II* icon, but when I double click on it, a requester appears saying Unable To Open your tool *Populous*. The same thing happens with *Harpoon*, while *Knights Of The Sky* and *DPaint III*, which have a different way of installing, don't work.

What is the trouble? Are some games not playable from hard disk? (they all work from floppy). I read in your July issue of Max Transfer Rate, but I don't know *HD Toolbox*, is it a PD program, otherwise where can I buy it? I hope in your help, apologise for my English, and wish you a good Summer from Italy.

Renato Marrese, Rome

Arrivaderci Roma, noi no comprendiamo L'Italiano. Er, thank you for that Mr Bartucca.

## A4091 MISFORTUNE

I currently have an A2000 using AmigaDOS 1.3 and Kickstart 1.3. I also have an A2091 SCSI HD controller with a 40Mb Quantum hard disk with 2Mb DRAM on board in my A2000 and an A4000 using AmigaDOS 3.

I would like to use my A2091 with the hard disk on board in my A4000. My A4000 does have revision 11 buster chip. However, I have been unable to get the drive up and running on the A4000. It recognises the controller board and also the 2Mb DRAM but I have been unable to access the hard disk.

Both devices are seen in *HDToolbox* as SCSI, but the IDE is at address 0 while the A2091 is at address 6. On initialisation it calls the first one SCSI and the A2091 Second. SCSI. DEVICE when it checks for devices on start-up.

The only way I have been able to mount this disk is by putting Mountlist in devs/dos drivers and using HDDISK, DEVICE as the device driver but no icon appears on the Workbench screen. When I try to format it through the Shell it says 'Format failure object is not of required types'. When I try to format it using the A2091hd install floppy disk it says 'Format failed: cannot find handler'. I do not need to boot from this disk because I already have a hard disk. I read in an AF special that 'it can be used with a bit of knowledge'. Could you tell me the following:

- 1) How on earth can I get the hard disk to work with my A4000?
- 2) Do I need a Mountlist entry?
- 3) If so, what device driver do I use?
- 4) Would this controller provide acceptable performance for a CD (should Commodore ever

If you've got an A4000 you should consider getting a SCSI2 controller such as the A4091.

bring one out for the A4000), or would I be better off using my IDE controller? I thank you for your help and co-operation in advance.

Wilton Sinclair, Manor Park, London

It was the A4091, not the A2091, we reviewed. They are different things - the 2091 is a standard SCSI controller for the A2000 and the A4091 is a SCSI2 controller for the A4000. The A2091 may still work on the A4000, but it won't support SCSI2 disks. I suggest that you make a Mountlist entry, but specify 2nd.SCSI.device as the driver.

The controller may not work with a CD at all. CD-ROM drives require full SCSI protocol support, and many cards do not support it (even cards like the Oktagon and Trifecta do not support the full protocol).

Unfortunately, we do not have a working A2091 in the office any more, so I can't test this, but I would suggest anyway that you upgrade the card to a faster, newer one, such as the Fastlane or the A4091.

Basically your problem is that some of the games you mention won't run on an A1200, so although you can install them to your hard drive you can't play them. The other problem is because the Assigns for the programs haven't been set up properly. Check out the box on Assigns in the Coverdisk Extra pages of this issue (page14).

## ON THE TILES

Workbench background pictures repeat themselves if they're not big enough to fit the whole screen.

I have seen many people write into AF asking how to display pictures in Workbench 3. I am able to do this but when they are displayed two copies appear across the screen and a small section re-appears at the bottom. I know it's something to do with resolution but which is the correct one, and is it controlled via Workbench or an art programme?

Nick Donnelly, Ely, Cambs

It's quite simple. What happens is that Workbench takes the picture and places it in the background.

If it runs out of image before it has filled the screen, it simply repeats the image again.

There are two things you can do. You can either resize the image to be the same size as your Workbench screen, or resize the screen to be the same size as the image. I recommend the former, so find out the pixel width of the screen (use the Screenmode Prefs program) and scale the image up to that size using *DPaint*.

## MIXED MONITORS

I own an A500 with a CD-ROM drive and an A1200 with a 120Mb hard drive and 6Mb of memory. All that I want to do is run both machines off the same 1084S 6-pin DIN plug monitor. At the moment I constantly have to swap the leads in the back of my monitor and it's starting to get a bit of a pain. Do you know of anywhere I could get a monitor splitter with a switch to change between the A500 and the A1200?

I have tried every computer supplier I can think of and nobody can seem to help me. I would be very grateful if any of your readers know of anybody who produces such a device.

N H Staff, Withernsea, N Humberside

I'm afraid that you won't find anyone doing monitor switchers, at least not cheaply. That's because in order to switch the signals, you would have to switch at least six different wires. The switches would have to be of very high quality too, to stop the signal suffering terribly.

You neglect to say which monitor you own. If you have one which accepts a composite input, you could wire this up to the A1200 and switch the monitor between RGB and composite modes.

# RICOH LP1200 PCL5 LASER PRINTER

## 400 DPI 2Mb RAM 6 PPM

A4 TEXT/A5 GRAPHICS @ 400dpi • A4 GRAPHICS @ 300dpi. A 2Mb RAM UPGRADE IS REQUIRED TO PRINT A FULL A4 PAGE OF GRAPHICS AT 400dpi  
**HP LASERJET III™ COMPATIBLE • FLASH ROM UPGRADEABLE!**

Ricoh, have used their expertise to produce a 'first' in laser printers, the LP1200 with FLASH ROM. HP LaserJet III™ compatible, the LP1200 employs industry proven laser technology which, unlike LED printers, uses a laser light source to produce the most accurate and intense printed images at a range of print resolutions up to 400dpi. A fast efficient processor and engine, plus a straight paper path design allows printing at a full 6 pages per minute. The 2Mb RAM version prints a full A4 page of text or graphics at 300dpi. Using standard resident fonts and the alternate controller firmware supplied, it can also print an A4 page of text or A5 page of graphics at 400dpi. Using the Windows driver supplied, it can print an A4 page of text at 400dpi from Windows 3.1, or using the Amiga driver, an A4 page of text at 400dpi.

**FREE!**  
**WINDOWS 3.1 DRIVER**  
 SUPPORTS 300 & 400dpi  
 PLUS  
**AMIGA DRIVER**  
 SUPPORTS 300 & 400dpi  
 ON REQUEST AT TIME OF PURCHASE

**2Mb RAM**

SHOWN WITH  
 UNIVERSAL FEEDER  
 TOP TRAY (OPTIONAL EXTRA)

The 4Mb RAM version can print a full A4 page of graphics at 400 dpi and makes full use of the LP1200's 400 dpi printing capabilities, such as using Microsoft Windows fonts. Unique additional standard features include FLASH ROM 'future proof' technology and LAYOUT - a powerful document description language. The LP1200's unique internal FLASH ROM, which holds the printer controller firmware, can easily be updated as new developments in technology occur. This protects the investment you make in buying a Ricoh LP1200. Other manufacturers would require you to buy a new printer! Internal FLASH ROM and industry standard FLASH ROM PCMCIA cards can also be used to permanently store fonts, macros, graphics and extra emulations. Again, unlike the competition, the LP1200 includes LAYOUT, a powerful and intuitive document description language as standard. This offers unique opportunities to develop custom made printing systems. Forms and document templates can be designed complete with logos and stored electronically in the LP1200's FLASH ROM, alleviating the need for pre-printed forms!

The LP1200 comes with a 100 sheet A4 paper tray as standard. An optional universal feeder automatically feeds up to 150 sheets of paper (up to 169gsm), 15 envelopes, transparencies and labels.

### CONSUMABLES + ACCESSORIES

PRODUCT CODE	PRODUCT DESCRIPTION	PRICE EXC VAT

## THE SILICA SERVICE

Before you decide when to buy your new laser printer, we suggest you think very carefully about WHERE you buy it. Consider what it will be like a few months after you have made your purchase, when you may require additional peripherals or software, or help and advice. And, will the company you buy from contact you with details of new products? At Silica, we ensure that you will have nothing to worry about. With our unrivalled experience and expertise, we can meet our customers' requirements with an understanding which is second to none. Complete and return the coupon now for our latest FREE literature and begin to experience the "Silica Service".

- **FREE OVERNIGHT DELIVERY:**  
 On all hardware orders shipped in the UK mainland (there is a small charge for Saturday delivery).
- **TECHNICAL SUPPORT HELPLINE:**  
 A team of technical experts will be at your service.
- **PRICE MATCH:**  
 We match competitors on a "Same product - Same price" basis.
- **ESTABLISHED 16 YEARS:**  
 We have a proven track record in professional computer sales.

- **PART OF A £50M A YEAR COMPANY:**  
 With over 300 staff - We are solid, reliable and profitable.
- **BUSINESS + EDUCATION + GOVERNMENT:**  
 Volume discounts are available. Tel: 081-308 0888.
- **SHOWROOMS:**  
 We have demonstration facilities at all our stores.
- **THE FULL STOCK RANGE:**  
 All of your computer requirements are available from one specialist supplier.
- **FREE CATALOGUES:**  
 Will be mailed to you, with special reduced price offers, as well as details on all software and peripherals.
- **PAYMENT:**  
 We accept most major credit cards, cash, cheque or monthly terms (APR 29.8% - written quotes on request).

# PAINT TUTORIAL

## Part 3

Get to the art of the matter and find out how to put the theory into practice as **Jason Holborn** uses *Personal Paint's* tools to start painting a picture.

**A**lthough our paint tutorials are based on Cloanto's *Personal Paint*, which is now bundled with the A1200, most paint packages are fairly similar, so the following principles apply to *DPaint* and *Brilliance*.

All three packages have tool sets such as Line Draw, Flood Fill and Magnify, and this month we'll look at some of these drawing and painting tools and use them to start drawing a basic picture.

These tools provide you with all that you need to create just about any artwork – from simple logos to full-blown works of art. As is the case with conventional artwork, a picture is built up from a basic framework with its detail built up in layers.

The best way to start any picture is to begin by building up an outline of the image using a combination of lines and primitives – the very basic objects that come with the package. This helps give an idea of layout and perspective. For example, to build up an outline of a human being or an animal, you can use circles and ellipses to construct the general shape of the subject. In the case of something like a tree, however, you'd begin with a mix of squares and lines.

Once you have constructed the outline, make sure you **save it!** If you make a mistake later on (or you don't like the way that the picture is progressing), you can always go back and reload the outline and start again.

**The Curve tool** is very useful when constructing the outline of an image. Curves are created in exactly the same way as a straight line, but once you've marked the start and end point of the curve, four control points appear down the length of the line.

These points geometrically define the shape of the curve, starting at the first point, and following through the second and third points to the end of the line. By dragging these points away from their default position you can create some

Bezier curves are more flexible than conventional curves because you can drag control points to adjust them.

## BRUSH STROKES

*Personal Paint* offers a bewildering range of Brush operations. Brushes can be flipped, scaled, rotated, skewed and even image processed with ease to create a wide variety of effects.

Brush manipulation is an essential feature of any paint package and it's a function that *Personal Paint* performs admirably. In order to start moving areas of the screen around, flipping and rotating as you go, you must first pick up an area of the screen as a Brush.

*Personal Paint* can hold up to nine separate user-defined Brushes in memory, each accessed by clicking on the Custom Brush number on the tool bar, or by pressing one to nine on the numeric keyboard.

A Brush is created by clicking on the Define Brush tool. To grab the Brush, move the mouse pointer to the top-left part of the area you want, then click and hold down the left mouse button. Drag the box down to the bottom right of the required area and let go. The Brush appears, and can be either moved to another point on the screen or distorted using one of the many options available from the Brush Menu.

Drawing with your new brush can be done in one of four ways – Matte, Colour, Replace or HBrite. Matte keeps the brush in the same colour and format as when it was created, whereas Colour alters the brush in its entirety to one user-selected colour. Replace works like Matte, except where Matte keeps the background colour transparent, Replace ignores the transparency information, making the Brush solid. When working in Extra Half Brite, the HBrite option turns all colours under the brush to the darker 32 colours of the palette. If the right-hand button is pressed, the lighter half of the palette is used.

The Resize menu allows the Brush to be shrunk or enlarged in several ways – Halve reduces the total surface of the Brush to a quarter of the original size, whereas Double doubles both the horizontal and vertical dimensions of the Brush. You can also change the

horizontal or vertical planes by altering the width and height of the Brush. The Brush can also be rotated to any angle, flipped through 90 degrees, flipped horizontally (creating a mirror image) and vertically (effectively turning the Brush upside-down).

Other *Personal Paint* options can be used to outline Brushes in several ways:

**SIMPLE:** outlines the Brush, using the selected foreground colour.

**SQUARE:** does the same, but with sharper edges.

**SHADOWED:** applies a border twice as thick as normal to the bottom and right edges.

**3-D:** creates an outline in the current background colour around the top and left of the Brush, and uses the foreground colour around the bottom and right edges.

When a combination of light and dark colours is selected, the Brush looks like a raised object – if the background is dark and the foreground light, the brush appears recessed.

Once you've picked up a Brush, you can apply one or more image processing effects to it.

## CONSTRUCTING AN IMAGE

**1** The first step when creating any artwork is to construct a basic outline of the image using a combination of *Personal Paint*'s Circle and Ellipse tools. Don't worry if some lines overlap – at this point the only thing that is important is that you can see the basic shape of the subject matter.

**2** With the outline complete, you can remove all the lines that would normally not be seen. These construction lines have now served their useful purpose, so they can be rubbed out using the *Personal Paint* Freehand Draw tool. The resulting image should be far more solid.

**3** Our image looks a bit bland at the moment so let's add some colour using the *Personal Paint* Fill tool. Don't worry too much about the precise settings of your colour palette – if you find that you need more colours later, you can expand your palette.

**4** Finally, shading is added to give the image a more rounded appearance. OK, so it's nothing special but as an example of how to construct an image, Dopey has done his job admirably!

*Personal Paint* provides extensive control over the various Fill operations from this requester.

fantastically complex bezier curves. Once you've drawn the basic outline of your image (and saved it to disk), remove the lines that aren't needed using a combination of the Freehand Draw Tool and a larger than average brush.

To remove lines that you no longer need, select the background colour from *Personal Paint*'s tool bar and then draw over the lines in question. After a little bit of time and effort you should be

The *Personal Paint* Magnify function proves particularly useful when adding detail to images.

left with a more solid looking outline. Once again, you may want to save this to disk in case you make a mistake later on.

The next step is to fill in the outline with areas of colour. When filling areas, *Personal Paint* has more than one trick up its sleeve. Solid Fill simply floods an enclosed area with a selected colour, depending upon which mouse button is pressed (pressing the right mouse button will force the fill

function to use the selected background colour). Gradient Fill utilises a user-defined range, and can be used in two ways: Manual or Automatic. Manual uses all colours in the palette, whereas Automatic calculates the smoothest transition from background to foreground colours.

Another option, Pattern, produces a constant pattern which is repeated over the entire fill area. This can either be a spread of two colours (the percentage of the second colour can be altered using the slider) or another patchwork-like design from one of nine brushes.

If you use the Filled option of the Square, Circle or Polygon tools (these can be fine tuned by clicking on their tool bar icons with the right mouse button), the resulting shape will be filled with the selected Fill type. There are many, many other painting tools that *Personal Paint* offers that can be used to create fantastic artwork such as the masterpieces we publish every month in our Gallery section (page154).

If you create a particularly stunning image after following our paint tutorials, why not send it in to the AF Gallery? Who knows, you could see your picture published in *Amiga Format* and there may even be a prize for the best ones. 

## SOFTWARE

Some of the following games titles are limited offers at the time of going to press. Order early to avoid disappointment. We stock all the latest titles which we offer at **30% OFF** R.R.P.

# PROVECTOR

If you've been following our *ProVector* tutorials over the last five months, you should be capable of producing some pretty good drawings and logos by now. But there are still a few features of *ProVector* that we haven't revealed. So here are some tips for producing better structured drawings.

## IMPORTING A BITMAP PICTURE TO TRACE

The next release of *ProVector* will be accompanied by a new piece of software called *StylusTrace*, which can convert bitmap images into *ProVector* drawings. But until then, if you want to create a structured version of a bitmap image, you'll have to draw it yourself in *ProVector*.

But don't worry, it isn't as difficult as it sounds, because *ProVector* enables you to import a bitmap image as a background.

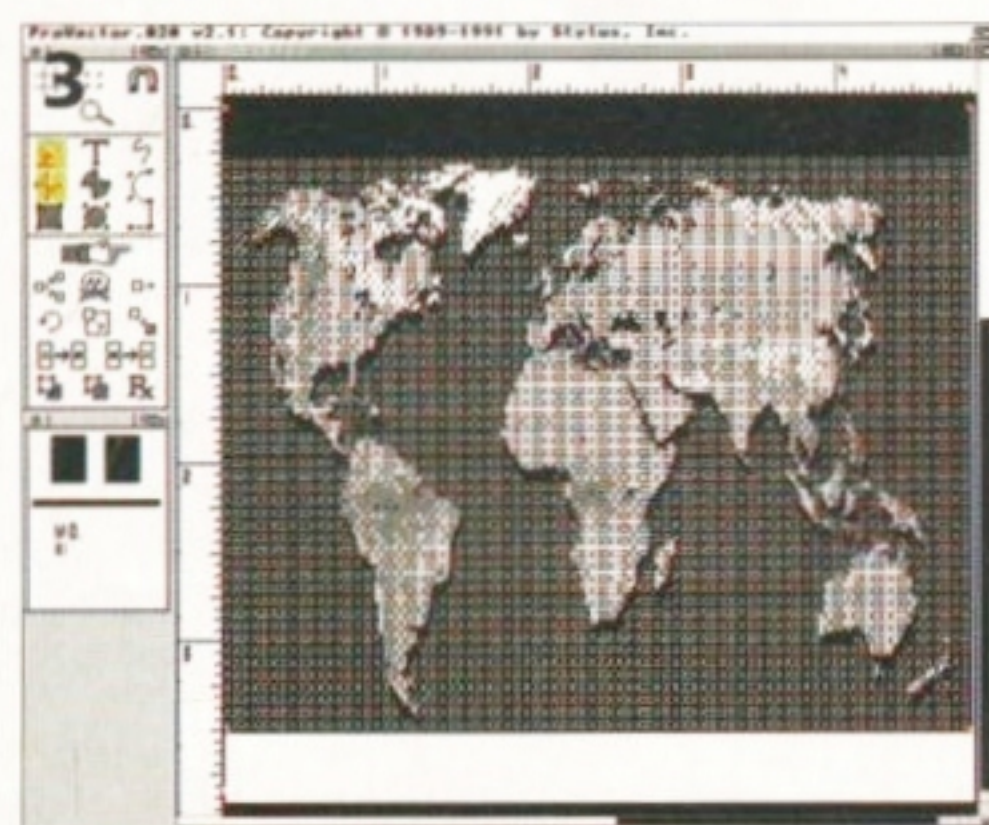

1 Select Import ILBM from the project menu (left).

2 You will be presented with a file requester like the one below. Request it to find the bitmap that you wish to import, then select OK.

3 Voila, your bitmap is imported into the *ProVector* document as an object. You can move, re-size or delete it as you wish. But more importantly, you can trace over the top of it to create a structured drawing.

4 When tracing a bitmap, resist the natural urge to do the large areas of colour (such as skies and backgrounds) first. If you do, you will obscure detail that you need to add later. Instead, draw small objects, lines and foreground detail first, and add larger items afterwards, using the depth selection tools.

If you have an Amiga running Workbench 2 or above, the chances are that you have *ARexx*. If you aren't sure, look in your System drawer on your

In the last in our series of *ProVector* tutorials, **Marcus Dyson** reveals a few hidden features to help you create better drawings.

Workbench, if there's an icon in there named *RexxMast*, then you have *ARexx*.

If you move the *RexxMast* icon into your WB Startup folder, *ARexx* is enabled when you re-boot your machine making *ProVector* a whole lot more powerful. A lot of features which *ProVector* seems to lack, are actually executed as *ARexx* scripts. Just go up to the user menu (below).

User			
Rexxecute...		Tile_PREFS	
Blend	Ctrl-B	ZoomSel	Ctrl-Z
Center	Ctrl-C	LineWgt-2pt	= .02768
Origin	Ctrl-O	LineWgt-1pt	= .01384
Dimension		LineWgt-.5pt	= .00692
CutPath		LineWgt-.25pt	= .00346
JoinPaths	Ctrl-J	ChangeSelWeights	
LayerSel	Ctrl-L	MinWeight	
LockObj		TouchLineWeights	
Gradient	Ctrl-G		
Measure	Ctrl-D		
Mirror			
MoveObj			
MovePts	Ctrl-E		
Shear	Ctrl-S		
ShowMag			

What you can see here are functions which can be accessed either from the menu, or from the *Rexxecute* gadget in the *ProVector* control panel. These functions cover a wide range of *ProVector* features. Try some out by drawing a shape, like this rectangle:

Make sure the rectangle is selected and go to the user menu, and choose the *Shear* function (or you could press Ctrl-S). You are presented with a small requester box where you can specify the amount by which you want to shear the rectangle:

Type in the angle you want to shear your picture by. I've chosen 25 degrees to create the effect shown in the picture at the top of the next column. Press OK and your image is sheared by the desired angle.

It is possible to use *ARexx* to write macros like this for any complex functions you require *ProVector* to perform. Unfortunately, there are too many commands to detail here, but users who would like to know more should strongly consider upgrading to *ProVector 3*.

This package will be released soon, and the manual contains detailed information on how to write *ARexx* scripts to get more from *ProVector*.

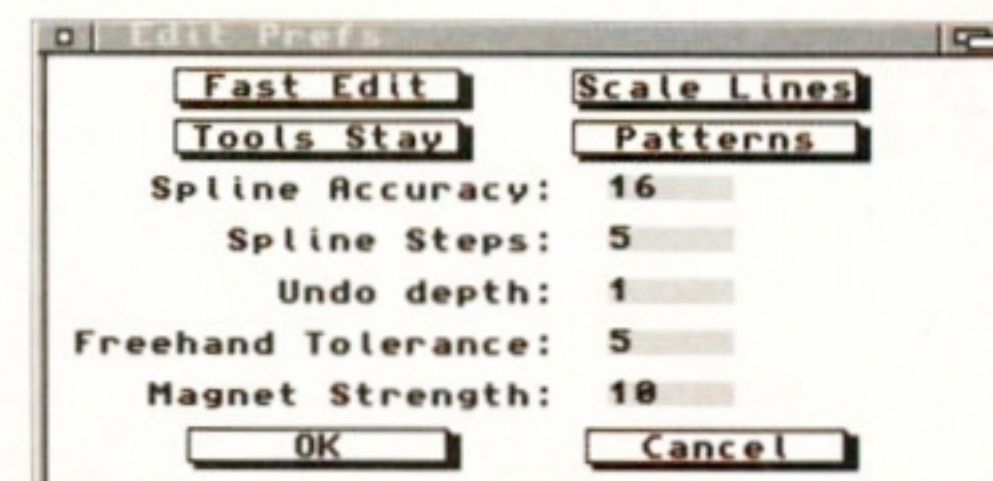

Part 6

## CORRECTING MISTAKES OR SAVING MEMORY

We all make mistakes in *ProVector*, but fortunately it has a very handy undo feature. But did you know that the undo feature will undo more than just the last thing you did to your drawing?

If you go to the Edit Prefs selection on the *ProVector* Misc menu, you will be presented with the window below.

Now click on the text string after the words Undo Depth. This controls the number of undos that *ProVector* can perform, if you change it to five, then selecting Right A-U repeatedly will undo the last five changes that you made to your drawing. The only down side is that all this requires memory, because *ProVector* has to buffer the last five actions that you made.

If you have sufficient memory, then make the undo depth as high as you think necessary, but if you are having difficulty running *ProVector* on your system, reduce the undo depth to none, and save your picture frequently, so that if you make a mistake you can re-load an earlier version.

If you've enjoyed these tutorials, or found *ProVector* a useful program – and judging from the response from readers many of you have enjoyed using *ProVector* – then you'll be pleased to know that Stylus have nearly completed work on the the new version of *ProVector*.

*ProVector 3* will feature AGA support, a more intuitive user interface and a host of other useful new features. Watch these pages for an in-depth *Amiga Format* review soon.

# BLITZ BASIC

## Part 4

If you want to buy the full *Blitz Basic 2* package at a special *Amiga Format* discount price of £49.95, turn to our Readers' Offers on page 126.

**T**his month we'll start work on a new game, and make use of some different *Blitz Basic 2* features which can make our lives easier. The new game is called *BlitzBlob* – a rather naff title I'm sure you'll agree. In *BlitzBlob*, the player controls a character which jumps around a large pyramid, changing the colours of the blocks underneath.

Out to get him are some green blobs, which tumble down the steps in an unpredictable fashion. Sound familiar? Well it shouldn't or we'd be in trouble for copyright infringement. With the

### NEWTYPES

A feature seen for the first time in this listing is Newtype – an idea borrowed from the programming language C. Using Newtype, a new sort of variable can be defined – one you can design to hold information on a particular item in your program.

In this case, we'll create a Newtype called `.blobtype` which contains five separate variables which store its position, direction and so on. This Newtype command doesn't create an actual variable, only a special template which can be used later. The subsequent line: `DIM blobs.blobtype(6)` creates an array of six variables (`blobs(1)`, `blobs(2)`, `blobs(3)` and so on), each of which contains those five other variables.

Without the new data type, we would need five separate arrays which all gets a bit untidy. You can get at the values in the `blobs(?)` variable by using a slash, like this: `bx=blobs(1)\x`. This sets `bx` to be the value stored in `x`, which is part of blob variable number 1. Likewise, `blobs(1)\x=48` sets this same variable to be 48.

You might wonder why we need to take all the values from the blob super-variables, print and move the blob, and then put all the values back. Why not use the blob variable as a parameter in the statement – after all, `bx` and `by` are passed in this way? Unfortunately, we can't pass complicated variables in this way – only simple ones. There is a way around it, but it's a bit tricky so we'll leave it for now.

Writing games with *Blitz Basic 2* is remarkably easy, so join Roy Ferguson as he embarks on a new project.

The graphics were rendered in *Imagine* because (a) Roy can't draw, and (b) they look cool.

game design set (player, pyramid, blob – nothing if not comprehensive!) the next stage is to start designing the graphics.

I decided straight away to go for a 32-colour low-resolution (256 by 320) screen because most games look best in this mode. The graphics for the 3D-style blocks were drawn in *Deluxe Paint* – using the grid lock feature it took about 10 seconds.

Their size was chosen to be as large as possible while still allowing a reasonable portion of the display to be fitted on to the screen. A possible future enhancement for *BlitzBlob* could feature vertical scrolling to show a larger display area, but I'm not going to show you how to do it because I want to copyright that idea myself...

**With the blocks** designed, the size of the player's character and the green blob can be estimated. I decided to chicken out from drawing and created the graphics using *Imagine*. After rendering them, they were loaded into *Deluxe Paint* and resized and recoloured to fit.

I also knocked up a huge Game Over message and the game title and put all these graphics on one *Deluxe Paint* image. This meant I could write a small *Blitz Basic* program using `GetAShape` to cut

After messing around in *Deluxe Paint*, we can put all the game graphics on to one 32-colour, lo-res screen.

This is where the game has reached so far. Next month, the player's character will appear and the game will start to make a bit more sense.

out the images and save them all in one go as Shapes (see listing 1). With the shapes safely saved to disk, I could move on to programming the game itself knowing that the graphics were safely stored away. Also, because all the graphics are on one 32-colour page, I know that the palette has been organised properly.

After sorting out the graphics, programming can begin in earnest. As always, I've tried to split the code into different procedures, or Statements

### HIP, HIP ARRAY

The *BlitzBlob* listing includes our first sight of an array – a variable which can hold more than one value. We need the array because in the 16 steps it takes the blob to fall a level, different values need to be added to its Y co-ordinate.

Remembering that the variable `Fall` counts from 1 to 16, we could use lots of `If` and `Thens` like this:

```
IF fall=1 THEN by=by-2 IF fall=2 THEN
by=by-2 IF fall=3 THEN by=by-1
...and so on.
```

This would be rather tedious, and it would also slow down the program because it would have to make 16 different checks each time the blob is moved. Instead we can use an array to store all the different values.

At the start of the program, we first declare the array. We need to do this so that *Blitz* knows

how much memory to set aside for us. `DIM dy(16)` The `DIMENSION` Statement creates a variable, `dy`, which actually contains up to 16 different values. We can refer to each one in turn like this:

```
dy(1)=-2 dy(2)=-2 dy(3)=-1
```

The number in the brackets, the index, can be replaced with a variable – for example, `Fall`, which then replaces our entire `If/Then` collection with one line:

```
by=by+dy(fall)
```

This assumes we have set all the values in the array, and this was done just after the array had been declared. Using a loop and the *Blitz* commands `Read` and `Data` makes it easier to make a list of values rather than having to set each one in a line of their own.

```

as *Blitz* refers to them. At the current state of the program, I have only needed three. These are:

**Display()** Set up the 32-colour screen, load in the shapes (and the palette from the original image to get the colours right). Then clear the screen and plot some background stars to look nice, and, using a loop inside a loop and some sums to get the co-ordinates right, draw the blocks on to the screen to get the pyramid effect.

**PrintBlob()** BBlit the enemy blob on to the screen. BBlit is used to protect the background

underneath (see last month's tutorial for more details about this).

**MoveBlob()** Move the blob down the screen, and if it reaches the bottom reset it to the top. The blob falls in 16 steps, and the direction it moves in (left or right) is determined randomly at the start of each step when the variable *Fall* is zero. The *x* co-ordinate is then incremented (or decremented) in steps of 2 (or -2) except at the start and end when we need to add (or subtract) an extra 1.

The *y* co-ordinate (how high) could have simply been increased to make the blob move down the screen, but this doesn't look very good. Instead a list of values stored in an array are used to make the blob first travel upwards, then downwards to give a bouncing effect.

The main loop of the program calls the **Display()** function and then sets up some values for up to six blobs. It then repeats moving and printing the blob until it gets bored (about 500 times later).

# GET THE BEST INFOR AND ADVICE MONEY

## AMIGA DESKTOP VIDEO

The Amiga is the world's premier low-cost graphics workstation. But its basic power, built-in expandability and ever-widening range of quality software and add-ons mean it's capable of highly professional results. All it takes is the know-how...

Amiga Desktop Video shows you how to:

- Title your own videos
- Record animations
- Mix computer graphics and video
- Manipulate images
- ...and much, much more

The author, Gary Whiteley, is a professional videographer and Amiga Shopper magazine's 'tame' desktop video expert. In this book he explains desktop video from the ground up – the theory, the techniques and the tricks of the trade.

Includes a comprehensive glossary to help you unravel desktop video jargon and terminology

## AMIGA SHOPPER PD DIRECTORY

Commercial software is expensive. Which is why more and more users are turning to the public domain/shareware market for their software. You can build a huge Amiga software library for the price of a couple of commercial packages!

But first you need to know what software is available. And then you need to know what it does. And then you need to know whether it's any good.

How do you find this out? You find out here!

The Amiga Shopper PD Directory has been assembled from the first 30 issues of Amiga Shopper magazine. All the PD/shareware reviews since issue one have been collated, compiled and indexed in a single 500-page volume.

Programs are divided into categories, reviewed and rated. We name the original suppliers of the programs and we've also included a directory of current suppliers at the back of the book.

Get this book and save yourself £££s!

## ULTIMATE AMOS

Explore the full potential of AMOS with easy-to-understand descriptions, diagrams and dozens of example AMOS routines. All you need to produce your own Amiga games is a smattering of BASIC knowledge, AMOS - and this book!

- Learn essential programming principles
- Master screens and scrolling
- Find out how to handle sprites and 'bobs'
- Incorporate sound and music in your games
- Discover dozens of handy AMOS routines for incorporating into your own programs

**Includes  
one packed  
floppy disk**

400 pages packed with all the information you need to get the best out of the Amiga's ultimate games creation package!

Includes a disk containing all the routines and programs printed in the book, plus four skeleton stand-alone games.

## GET THE MOST OUT OF YOUR AMIGA 1993

If you've got an Amiga, you've got the world's most powerful, versatile and cost-effective computer. If it can be done a computer, it can be done on the Amiga. But getting started in comms, desktop publishing, music or any other area of computing is difficult if you don't have a friendly guide.

This book is your guide! It covers every Amiga application, from desktop video to programming, from games to music, explaining the jargon, the techniques and the best software and hardware to buy. And...

- Discover the Amiga's history
- Get to grips with Workbench.
- Find out about printers, hard disks, RAM, floppy disk drives and accelerators
- Learn useful AmigaDOS commands
- PLUS 2 disks of top Amiga utilities!

**Includes  
two packed  
floppy disks**

# Save £10!

You can save £10 on the price of this book if you buy it at the same time as Ultimate AMOS – see the form on the right for details.

# INFORMATION CAN BUY!

Future books are written by the very same people who write your favourite Amiga Magazines. So you know you can count on the very best, from our money saving PD Catalogue or our guide to C Programming. The finest Amiga books you can buy.

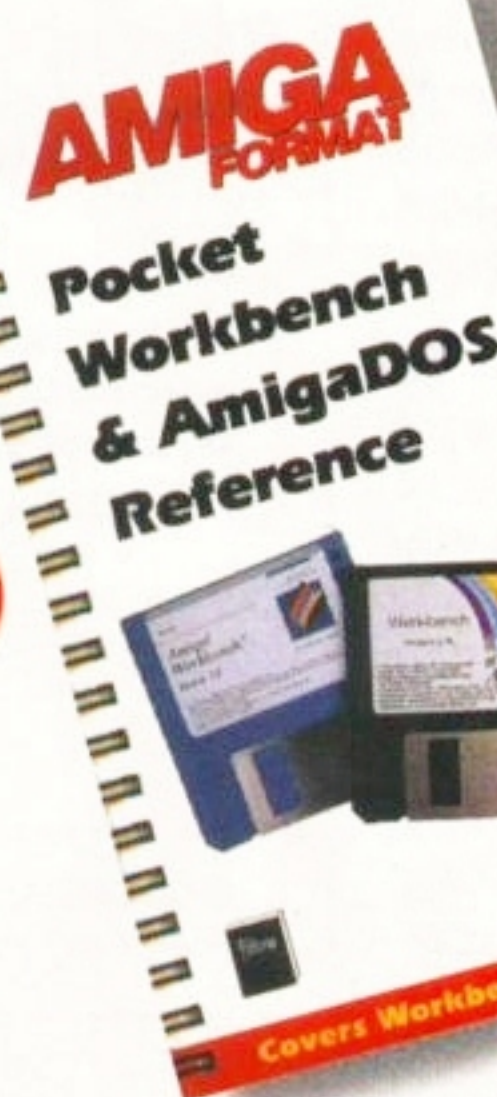

## COMPLETE AMIGA C

Here, in one single package, is everything you need to start programming in C. All the information you need, all the explanations, all the jargon-busting, all the documentation AND all the software. Getting started in C programming has never been easier than this.

- Learn the basics of C programming with this 300-page book by Cliff Ramshaw, editor of Amiga Shopper magazine
- Write and compile your own programs using the full version of top shareware C compiler DICE, provided with the book
- Explore all the compiler's features with the on-disk documentation
- Exploit your Amiga's special features using the version 1.3 and version 2 Commodore 'includes' and 'libraries' also provided (these are compatible with version 3 machines but will not provide version 3 features)

Everything you need to get started in C programming on the Amiga is right here at a fraction of the price of a commercial package

## THE POCKET WORKBENCH AND AMIGADOS REFERENCE

How do you copy files? How do you format floppy disks? How do you move things from one folder to another?

If you've just got your Amiga, Workbench and AmigaDOS can be confusing - unless you've got expert help on hand:

- Understand Workbench menu options
- Customise Workbench for your needs
- Make the most of the supplied Tools, Utilities and commodities

PLUS For more advanced users there's a full AmigaDOS 2 & 3 command reference, listing all the commands in alphabetical order and quoting function, syntax and examples. Learn how to really drive your Amiga!

This pocket-sized book contains the essential AmigaDOS reference section from "Get The Most Out of Your Amiga" in a ringbound, handy edition - as well as much, much more.

## MUSIC-X T

In the final part of his series of *Music-X* tutorials, Maff Evans explains how you can cut corners by getting to grips with the Filter Page.

In our previous tutorials we covered many of the basics of recording, creating and editing sequences and sounds with the *Music-X* Coverdisk. Now we'll take a look at MIDI control and give you some hints and tips about how to use the Filter Page – one of the more complex areas of the program.

The Filter is used to alter the routing of certain MIDI messages. You can use it to send events to a different channel, limit the amount of data to be processed or even to control completely different MIDI events. For example, if your synth sends unusually large amounts of pitch bend info, you can set *Music-X* to only process changes over a certain threshold, thereby stopping the program from receiving a glut of information and making the process of creating music a lot easier. After all, if you just pitch bend a fraction of a semitone, you don't really need to record such subtle changes to create the same overall effect.

## FINDING YOUR WAY AROUND

The menus hold functions such as loading and saving filters, Initialise all (which resets the filters to their default settings) and access to the Keymap and Control map editors.

**REMAP:** Click on the channel where you want particular types of MIDI data received on the current channel to be sent.

**FILTER:** Limits the MIDI data to be mapped. Enable in white means they are allowed through, brown means they are stopped. Continuous data has a percentage slider. The higher the percentage, the smaller the changes needed to be registered. 100% lets everything through, 000% stops everything.

**CHANNEL:** Click on the channel number to call up its filter settings.

**EVENT TYPE:** The type of MIDI event to be filtered.

**MIDI MODE PANEL:** Some synths and modules have strange button configurations for accessing MIDI modes. By clicking on these you can assign modes from your Amiga. Check your synth's manual to see which mode does what.

**CONTROL MAP:** This remaps certain controller information to other events. For the moment make sure this is OFF.

**KEYBOARD MAP:** You can have up to four keymaps in memory, for triggering alternative notes, transposing, sending alternative data when notes are played and so on. For the moment leave this OFF.

**DATA ECHO:** This determines where MIDI data that *Music-X* receives is sent. RE-OUT sends the data out via MIDI, INTERNAL routes it to internal samples. The yellow option is the one selected. If none is selected, the data is not rechannelled. This is useful if your keyboard has no Local Off function.

# TUTORIAL

## SETTING A DRUM FILTER

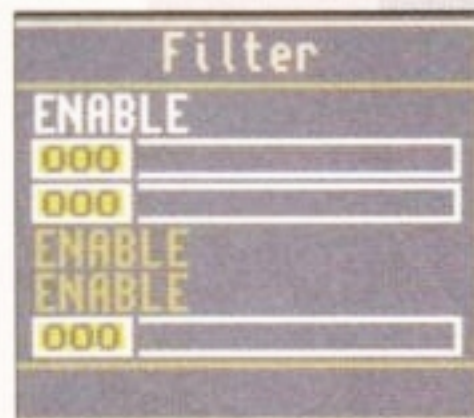

As an example, let's imagine that your controller keyboard can only transmit on MIDI channel 1, but you want to record a drum part from your multitimbral controller on channel 10 (the usual channel for MIDI drum patterns). Another problem is that your sensitive keyboard sends loads of aftertouch messages that clog up the MIDI flow and make the drums sound weird.

**1** Call up your drum sound on your module and assign it to MIDI channel 10 and set your keyboard to send on channel 1. Go to the Mode menu and select Set Filters to call up the filter page.

**3** Click on channel: 1 to make sure that the settings for receiving channel 1 are selected. In the Remap section, go to 10 in SET ALL and click on it. This routes everything received from your channel 1 control keyboard to be output on channel 10.

through, Channel and Poly Aftertouch set to 000 (so that no keyboard aftertouch is received). Now you can play and record drum sounds on channel 10 from your controller keyboard and not have streams of aftertouch data messing things up.

**2** Make sure that the RE-OUT button is lit under Data Echo: so that the MIDI data is sent back out via MIDI, and turn Local Control of your controller keyboard to OFF. Also, make sure that the Keyboard and Control Maps are set to OFF.

**4** Make sure that you have these settings in the Filter section: set Notes to ENABLE (white) so that notes are sent

## IT'S MUSIC TO OUR EARS

Every month we carry hints and tips for Amiga Format Coverdisk programs – this month's section is on page 14. If you have discovered something about Music-X that you think will help other readers get the most out of the program, write to:

**Amiga Format Coverdisk Tips,  
30 Monmouth Street,  
Bath,  
Avon,  
BA1 2BW.**

**AND** if you have any specific requests for help with your Music-X Coverdisk program, write to our Workbench section and we'll do our best to help you out.

## TRIGGERING INTERNAL SAMPLES

You may want to play internal Amiga samples from an external keyboard rather than using the usual method of entering them with the mouse. This is a pretty simple process.

Ch	Sample Name	Size	Tune	Oct	High Note
01	Kick-Addiction	9292	100	1	077(F4)
02	Kick-Chainsaw	7016	100	1	077(F4)
03	PeopleSnare.ss	13K	129	1	076(E4)
04	CrawlMetal	4322	192	1	073(C#4)
05	ThankStrike.ss	12K	12	1	081(A4)
06	HiHat1.ss	3072	0	1	081(A4)
07	HiHat2.ss	1200	72	1	078(F#4)
08	TimeMetal.ss	4864	0	1	081(A4)
09	Banana-Laugh	11K	-25	1	082(A#4)
10	Banana-Laugh	11K	-25	1	082(A#4)
11	Clocks-NoiseLoop	22K	206	1	072(C4)
12	Bulgarian-Wail	60K	24	1	080(G#4)

**1** Load up your samples and make a note of the channel numbers that the sounds you want to play are on. This is because the channel numbers for samples are treated like MIDI channels.

**3** Click on the channel number of the sample you want to use next to SET ALL. This maps all incoming notes to that channel. Set Note to ENABLE, Channel Aftertouch, Poly Aftertouch and Pitch Bend to 000 and disable Program Change and Control Change (we just need the notes).

**2** Call up the Filter Page from the Mode menu and click on the Channel: number for the channel on which you will be sending notes (in other words the channel of your keyboard).

**4** Make sure that both the Keyboard and the Control Maps are set to OFF and set Data Echo: to INTERNAL. This will map the notes received to your Amiga sample just like with any other MIDI instrument.

# AMIGA FORMAT SURVEY

## HELP US TO KEEP IN TOUCH WITH AMIGA FORMAT'S READER SURVEY

In order to keep giving you the best service possible we need you to tell us all about yourself. And as an incentive 10 randomly-selected survey entries will each win one of 10 copies of the brilliant *Empire Soccer '94*, which have been generously donated to the cause by Empire Software. So get cracking!

**empire**  
SOFTWARE

### ALL ABOUT YOU

#### 1. Are you?

- a) ☐ Male  
b) ☐ Female

#### 2. How old are you?

- a) ☐ 10 or under  
b) ☐ 11 to 14  
c) ☐ 15 to 19  
d) ☐ 20 to 25  
e) ☐ 26 to 29  
f) ☐ 30 to 40  
g) ☐ Over 40

#### 3. Where do you live?

- a) ☐ SE England  
b) ☐ SW England  
c) ☐ Midlands  
d) ☐ NW England  
e) ☐ NE England  
f) ☐ Wales  
g) ☐ Scotland  
h) ☐ Northern Ireland  
i) ☐ Europe  
j) ☐ North America  
k) ☐ Rest of the World

#### 4. What do you do?

- a) ☐ At school  
b) ☐ At college or sixth form (16-18 yrs)  
c) ☐ At Uni, Poly or higher education (18 yrs+)  
d) ☐ In full or part-time employment  
e) ☐ Unemployed

#### 5. If working, what do you earn per year?

- a) ☐ Less than £5,000  
b) ☐ £5,000 to £9,999  
c) ☐ £10,000 to £14,999

- d) ☐ £15,000 to £19,999  
e) ☐ £20,000 to £24,999  
f) ☐ Over £25,000

### ALL ABOUT YOUR AMIGA

#### 6. What model of Amiga do you own?

- a) ☐ A1000  
b) ☐ A500/A500+  
c) ☐ A600  
d) ☐ A1200  
e) ☐ A1500/2000  
f) ☐ A3000  
g) ☐ A4000/30  
h) ☐ A4000/40  
i) ☐ CDTV  
j) ☐ CD<sup>32</sup>

#### 7. What version of Workbench are you running?

- a) ☐ 1.2  
b) ☐ 1.3  
c) ☐ 2.04/2.05  
d) ☐ 2.1  
e) ☐ 3.0/3.1

### ALL ABOUT YOU AND SHOPPING

#### 8. Which is the most important factor in helping you decide which shops/mail order companies to buy Amiga products from?

- a) ☐ Size of adverts  
b) ☐ Frequency and regularity of adverts  
c) ☐ Quality of design of adverts  
d) ☐ Word of mouth  
e) ☐ Reputation of the company  
f) ☐ The price of the goods  
g) ☐ Quality of service  
h) ☐ Selection of goods

#### 9. Have you ever bought Amiga goods from... (Tick all the options you regularly use/have often used in the past)?

- a) ☐ Mail order (ads in *Amiga Format*)  
b) ☐ Mail order (catalogues/clubs etc)  
c) ☐ Specialist retailers (Silica/Phoenix/Calculus etc)  
d) ☐ High Street retailers (Dixons/Virgin/Game Zone etc)

#### 10. If you have bought Amiga software or hardware from a company once, what would most convince you to buy from them again?

- a) ☐ I tend to stick with the same shops  
b) ☐ I would buy from them again if the prices were right  
c) ☐ Polite and helpful staff

- d) ☐ Seeing their adverts again  
e) ☐ I'd buy from them again if they had a good selection  
f) ☐ Advice and after-sales service  
g) ☐ I look for a different retailer every time

### ALL ABOUT US

#### 11. How often do you buy *Amiga Format*?

- a) ☐ I subscribe  
b) ☐ Every month  
c) ☐ Usually, but sometimes I miss it  
d) ☐ Only when it looks particularly good  
e) ☐ This is my first ever issue

#### 12. What makes you decide to buy *Amiga Format*?

- a) ☐ I subscribe  
b) ☐ The cover  
c) ☐ The stuff on the disk  
d) ☐ If the contents look interesting  
e) ☐ I only buy it when the other magazines look crap  
f) ☐ I only buy it when I can afford it

#### 13. How did you get hold of this copy of *Amiga Format*?

- a) ☐ Subscription  
b) ☐ Planned visit to the newsagent  
c) ☐ Delivered by newsagent  
d) ☐ Reserved at newsagent  
e) ☐ Spontaneous purchase  
f) ☐ This is a friend's copy

#### 14. Which is your favourite *Amiga Format* cover?

#### 15. Which of these other magazines do you buy/read?

	Regularly	Occasionally
a) <i>Amiga Shopper</i>	<input type="checkbox"/>	<input type="checkbox"/>
b) <i>Amiga Power</i>	<input type="checkbox"/>	<input type="checkbox"/>
c) <i>Amiga Computing</i>	<input type="checkbox"/>	<input type="checkbox"/>
d) <i>CU Amiga</i>	<input type="checkbox"/>	<input type="checkbox"/>
e) <i>The One Amiga</i>	<input type="checkbox"/>	<input type="checkbox"/>

# BIG BROTHER IS WATCHING WHAT YOU SAY

Do you know who is reading your E-mail? **Richard Baguley** looks at how the secret service deal with Comms and how they are trying to clip your wings.

Cyberspace can be a dangerous place. Ask Steve Jackson. On March 1, 1990, US Government agents raided the offices of his publishing company and seized all of his computers and the Bulletin Board system that his customers used.

No charges were brought against him, his equipment was not returned, he received no explanation of why his possessions had been seized, and he had no compensation for it.

So why did the US Government agents seize Steve Jackson's computers? It later emerged that an employee had a copy of a document detailing how the Telephone Emergency System (911) worked, which had been obtained illegally from a telephone company's computer. Although this document only contained information that was freely available elsewhere, the company called in Government agents to track down the culprit.

Meanwhile, the person responsible had put a copy of the document into a electronic magazine (called *Phrack*), and an employee of Steve Jackson Games was sent a copy.

**When the US** secret service could not get on to the BBS, they decided that Jackson's company BBS was being used to distribute this document, and raided the company, seizing three computers, five hard disks and several hundred floppy disks.

In fact, there was no copy of *Phrack* on the Steve Jackson BBS (called *Illuminati*). When the equipment was returned after three months, several files had been deleted, and Jackson had to delay the publication of one of his books, not to mention having to lay off several members of staff.

Jackson eventually received compensation for the loss of business, although it took a court case to get the US Government to acknowledge they had been in error.

Does this sound like a fantasy? Sadly, it's true. Although there have been changes in the way that the secret service (and other law enforcement or intelligence services) approach E-mail and Comms, they still try to keep tabs on what people are saying over the networks.

This is a point worth remembering when you are sending E-mail. Unlike letters, E-mail can be copied and stored any number of times before it reaches its destination, and you have no way of telling if it has been intercepted.

The US Government certainly want to know what people are saying and they proposed a system which would mean that information being sent over a telephone line was encrypted (so a casual phone tapper couldn't listen in), but which meant that the State could still listen in if they wanted to.

This system is based around a piece of hardware called the Clipper chip which uses a complex cryptography system which is supposedly unbreakable. At the start of a call, the two chips in both telephones decide on a key which is different for every call. However, there is a backdoor built

into every chip. A third party would have a copy of the methods used to generate the encryption key, and would hand this information over to a Government agent when they produced a valid writ allowing the tapping of telephone calls.

It sounds like a good idea, but there are problems with it. It is proposed that the system will be voluntary, so what is to stop a terrorist buying a telephone without this device fitted, or using their own system, which would be harder to break? Plus, if the keys to the Clipper encryption are held by a third party, anybody could get hold of them illegally and use them to tap your calls.

**Although the UK** Government has not (so far) decided to adopt the Clipper or any similar standard, organisations such as MI5 are fully aware of the potential of E-mail for terrorists, pornographers or other criminals.

Comms is still a relatively new method of communication, and the rules on what is acceptable and what is not are still being written. The debate is akin to the situation at the birth of the printing press, when many people found the idea of teaching people to read and allowing them access to cheap printed books unacceptable.

There are lots of people who want to legislate until Comms is so restricted that it would be almost impossible to start up your own Bulletin Board or use E-mail. Are we going to let them? ☺

## FURTHER INFORMATION

There are a variety of organisations looking at the issues of State censorship and interference in Comms - one of the most vociferous and respected is the Electronic Frontier Foundation (EFF). Information about their work is available from the following Internet sites.

**FTP.EFF.ORG** - A large number of files (including details of EFF legal actions and proposed

legislation) are available by anonymous FTP from this address.

**INFO@EFF.ORG** - General information on the work and purpose of the Electronic Frontier Foundation.

**COMP.ORG.EFF.NEWS,**  
**COMP.ORG.EFF.TALK** and  
**ALT.POLITICS.DATASHIGHWAY** - Three usenet newsgroups where members of the EFF and others discuss aspects of the law and Comms.

## Selected Amiga Software for the selective Amiga user.

The complete system for cataloguing your CD, Video, and games collection. Keep track of all your Entertainment media. All you'll ever need.

Only £7.00

### CTG7-3. CATALOGUERS

A compilation of the best Amiga PD disk duplicators – over 10 in all. Make backups of all your software with ease.

Only £5.00

### CPY5-2. DISK COPIERS

The complete in home professional office set. Includes: Wordprocessor, Database, Spreadsheet and Diary. All with complete documentation.

All for only £10.00

### HOP10-4. HOME OFFICE PROFESSIONAL

Over 3,000 Adobe, Compugraphic & True type fonts are included on this one CD. Compatible with any CD Rom drive connected to an Amiga. It is also compatible with PC CD Rom.

£19.95

### PRO. FONTS CD ROM

Now the good weather is here, it's time for you to do the garden, and here's a good reason not to. You'll be too busy designing it.

Only £3.00

### GRN3-1. 3D GARDEN DESIGNER

The A1200 degraders will ensure that over 95% of ALL Amiga games / demos will work on your powerful A1200 / A4000. Easy to use...

Only £4.00

### DEG4-2. A1200 DEGRADERS

Remember the good old days, when games were games. Now you can with this amazing product that allows you to run all your old Spectrum games on the Amiga.

Only £5.00

### SPE5-3. SPECTRUM EMULATOR 2

Play Poker against some of the most glamorous women in the world. Various components to play against. Very gripping stuff!!

Only £12.00

### DSP12-1. DELUXE STRIP POKER 2

Make your own memory expansion. Sound sampler. Convert a PC keyboard so it works on the Amiga. Build a PC bridge board, and loads more.

Only £3.00

### HWP3-1. HARDWARE PROJECTS

Fifty gorgeous babes for you to drool over. All images work on A1200 / A4000 thus giving you the best possible picture quality. All run in a slideshow format for ease of viewing...

Only £15.00

### GRL15-10. AGA BATHING BABES!!!

If you like knocking the sense out of big mean guys then Bodger Kombat will suit you down to the ground. Lots of blood, guts and gruesome sound FX make this 2 player game a classic.

£6.00

### BDK6-3. KOMBAT

Run PC Software on your Amiga. Supports VGA on the A1200 or A4000. Works with your hard disk, floppy drive, serial, parallel & mouse ports.

Only £39.95

### PCT40-1. PC TASK

Over 60 high quality Compugraphic fonts, for use in Pagestream or Wordworth 2/3. This is a selection of the most popular fonts available. Don't miss it.

Only £7.00

### PSF7-3. COMPUGRAPHIC FONTS

The complete RSI Demo maker collection. Contains the latest RSI demo maker, font editor, graphic templates, vector editor, music, logos and a complete tutorial.

Only £15.00

### RSM15-5. THE RSI DEMO MAKER

A ten disk set of over 50 Imagine Objects. Includes, Star Trek, Star Wars, Vehicles, Dinosaurs, Future Bike, Animals, WWII and loads more.

A bargain at just £15.00

### IOD15-10. IMAGINE OBJECTS

Create your own fascinating Random Dot Stereograms on your Amiga. Works with any standard Amiga picture.

Only £3.00

### RDS3-1. RANDOM DOT STEREOGRAM

Everything you'll ever need for crunching or de-crunching your files or disks. Includes: Power packer, DMS, LHA, Crunchmania, and loads more.

All for only £5.00

### CRM5-2. CRUNCH MANIA

If you want to link up either 2 Amigas, 2 PCs, or an Amiga to a PC then this easy to use software package will suit you fine.

Software £8.00

### COM8-3. NETWORKING SET

Learning to type can be a difficult task, but not when you get a copy of our classic Typing Tutor. Includes 3 games to help you learn to type. Perfect for the beginner.

Only £3.00

### TYP3-1. TYPING TUTOR

Double the space on your hard drive with ease. A safe & tested way of doubling the size of your hard disk drive. 80meg will become 150meg. Runs silently in the background.

£5.00

### EPU5-2. DISK DOUBLER

Who needs Sonic, or Mario when you can play fantastic Amiga games like this. It's a very addictive platformer with superb graphics. Don't miss it.

Only £5.00

### MSB5-1. MORTON STRIKES BACK

The complete A1200 / A4000 hard disk installation software set. Prep, format & install Workbench correctly with this easy to use set.

Only £7.00

### AHD7-2. A1200 HARD DRIVE INSTALLER

The most professional word searcher & crossword solver available on the Amiga. Includes a dictionary of over 58,000 English words, and you can even add your own.

Only £5.00

### WFP5-2. WORD FINDER PRO.

Klondike the card game features unbelievable 256 colour high res graphics. Also available now are 4 new card sets, each featuring a different theme. A1200/A4000 only.

Only £6.00

### KLD6-3. KLONDIKE DELUXE AGA

If you want to learn the rules of chess or just want to play a great chess game, then order JI Ultimate Chess now. Superb graphics and speech make this a great program.

£4.00

### JIT4-1. CHESS & TUTOR (2 MEG)

If you're into Imagine then this fantastic new Objects disk will amaze you, objects include: Delta Fighter, Soul Hunter, Tyrannid and Vorlon One Space Craft.

Only £4.00

### BLF4-1. BABYLON 5 OBJECTS

XCOPY Pro. is regarded as the world's most powerful Amiga disk copier. The makers are so sure of this that they offer you money back if you can't backup your software collection.

Only £34.95

### XCP35-1. XCOPY PROFESSIONAL

If you've just purchased your Amiga then you may be a bit boggled about how to use it properly – well this five disk set will see you right. The complete beginner's guide.

Only £9.00

### ABG9-5. BEGINNER'S GUIDE

## PROFESSIONAL VIDEO BACKDROPS

Overseas orders are welcome, but there is a minimum order of 3 titles and please add £1.00 per title for first class Airmail delivery.

## COLLECTING

You are welcome to collect your order, but you are advised to phone it through prior to collection. Office hours: 9.30am-5.30pm Mon-Sat.

## ORDERING BY POST

Simply send your order in on an A4 page, listing the items you require, the total cost, and your name & address, or if you wish simply mark off the items you wish to order, fill in your name etc, and send this page to Epic Marketing, 1st Floor Offices, Victoria Centre, 138-139 Victoria Rd, Swindon, Wiltshire, SN1 3BU.

## ORDERING BY PHONE

Call any time between 9.30am & 5.30pm Monday to Saturday with your credit card details and the items you would like to order.

Delivery charges. Please add a total of 50p for PD disks in the U.K. & Mainland.

☐ SAME DAY GUARANTEED DISPATCH ON ABOVE TITLES ADD £4.00

Most orders are dispatched within 48 hours

# MAILBAG

Steve Jarratt dips into the AF postbag and pulls out a handful of letters covering the whole spectrum of Amiga use. Send your letters to: Letters To The Editor, *Amiga Format*, 30 Monmouth Street, Bath, Avon BA1 2BW.

## DIM SUNG

I am one of those 'dim' people who doesn't subscribe to *Amiga Format*. The only reason being I can't afford to fork out the full price of the subscription in one go, so I resort to buying it every month from my local newspaper shop.

May I make a suggestion? Why don't AF provide for the dim people and make it possible to pay for the cost of a subscription in instalments, maybe by direct debit?

May I also suggest that you choose your words more carefully and not refer to people as dim without first taking their circumstances into consideration. If it wasn't for the excellent quality of your magazine I'd stop buying it. So there!

F Logan, Manchester

We already offer a direct debit option (see page 33), but this takes the cost of the subscription out in one lump sum. If possible, we'll try and set up a system which automatically takes out monthly payments from your account, which is less of a burden on your cashflow.

However, it still makes more sense to subscribe, whichever way you do it!

## TRY BEFORE YOU BUY

If Mr Drew from Cleveland had read the AF review of KO3, he'd be a happier man.

I have committed the ultimate sin and purchased two pieces of software before waiting for AF's definitive reviews. As a result I am £55.98 worse off for my misdemeanour, which would have bought the next 14 issues of my favourite mag.

I recently went into my local games store and to my surprise saw *Kick Off 3* and *Empire Soccer* staring at me invitingly. Normally you review games before they are released and I was surprised to see these games out before your reviewers had got their

## NO SCORE DRAWS

Something seems to be very wrong with the Amiga game reviews that appear in *Amiga Format* and *GamesMaster* (both of which are published by Future Publishing):

<i>Traps 'n' Treasure</i>	AF82%	GM39%
<i>Arcade Pool</i>	AF94%	GM61%
<i>Puggsy</i>	AF47%	GM68%
<i>Brian The Lion</i>	AF49%	GM90%

I read your magazines for buying advice but I'm left totally confused. Surely a game should be reviewed objectively? Unless you can both agree on a game's merits, my hard-earned cash will stay in my pocket!

R Swann, Clwyd

The problem with any game review is that it's a very personal thing. Some people think that *Lemmings* is the dog's lower parts; personally, I'm not that bothered. So review scores vary from reviewer to reviewer and magazine to magazine. However, in this instance, you have to remember that *GamesMaster* is a multi-format console-oriented mag, and their reviews are influenced heavily by the sorts of games and scores that other formats receive. If in doubt, go with AF's scores.

mitts on them. *Kick Off 3*'s box claimed international action at its best, 'Over 2,000 frames of animation for fast-flowing action'. *Empire Soccer* claimed: 'a totally new soccer sensation' with 'atmospheric crowd effects' and 'superb graphics'.

I bought both games and when I got home I really felt devastated at the crapness of them. With *Kick Off 3*, which is an AGA game, the playability is disgraceful, the graphics are terrible. God knows where the 2,000 frames of animation are and when you score, instead of superb sound effects, it all goes quiet!

Worse still, some perfectly good goals just go through the goal net for a goal kick. You need a joystick with two independent fire buttons, and the instant replay facility is a waste of time. Dreadful. *Empire Soccer*'s not quite so bad, but the graphics are hardly 'superb' and the sprites are so big that you only see the opponent's goal when you reach their area.

Perhaps these games weren't sent to you for review because the companies knew they were crap and it could harm sales. Come on software companies, get your act together!

Mr Drew, Cleveland

There are many mags on the news stands, but if you want the best, get AF.

The problem with any game review is that it's a very personal thing. Some people think that *Lemmings* is the dog's lower parts; personally, I'm not that bothered. So review scores vary from reviewer to reviewer and magazine to magazine. However, in this instance, you have to remember that *GamesMaster* is a multi-format console-oriented mag, and their reviews are influenced heavily by the sorts of games and scores that other formats receive. If in doubt, go with AF's scores.

True, *Kick Off 3* is disappointing, but we think you're being hard on *Empire Soccer* - stick with it, it's good fun. However, it just goes to show that it's worth waiting for *Amiga Format*'s reviews, even if you eventually disagree with them (we can't please everyone).

Also, if the shops you go to won't let you play the game first, find a shop that will: 56 quid is a large wad of cash to blow on games you haven't even tried!

## GRAVE SITUATION

Well, yet another month has passed and it would appear that there still isn't a buyer for Commodore. Oh dear, oh dear...

I can't say that this has been a surprise; after all the Amiga is still, after all this time, a virtual unknown in this big world of computers. Let's face it, the Pee See and Mac are the big names while our beloved Amiga remains in near obscurity.

It's time to wake up and smell the coffee, my dear fellow Amiga users. There will be no more Amigas manufactured after this year. What there is in existence now is all that there will ever be.

Friends, the Amiga had the ability to conquer the desktop computer

world. It's a crying shame that the powers that be at Commodore hadn't the competence to do what their thousands of loyal customers wanted. All they had to do was market the damn machine properly!

So Commodore have killed their adopted baby before its tenth birthday. Well, the Amiga will survive for a good few years yet in spite of Commodore, and it will continue to do so as long as there is hardware and software support.

But what we don't want at this stage is all these lame software pirates out there thinking 'Well, the Amiga is virtually dead now, so it doesn't matter if we pirate every game and utility that comes out'. All this will do is to make the software developers think that the Amiga isn't worth programming for, and then the machine's coffin will be well and truly nailed shut.

Jonathan McBrien, Fermanagh

Admittedly, Commodore have failed to make the most of their excellent technology, but I think you're a little premature in your obituary of the Amiga.

As I write this (some weeks before the news pages, I'll point out), it looks as though Commodore's management have succeeded in their bid to buy the business. If this is the case, then there will certainly be more Amigas made - and very soon. The machine isn't dead yet and a negative attitude won't help things one bit: the Amiga and the Amiga market needs its loyal users more than ever.

And if there are any pirates reading - lay off the Amiga!

## TAKING THE PS

Here are some PSs I have saved up. I just couldn't think of a letter to go with them.

PS: What the hell ever happened to Q & A anyway?

PPS: When will the next *AF Special* be out? (The last one I got was *The Beginners' Guide* - God knows why because I'm not a beginner at all).

PPPS: Stop writing the PD and Re-releases as one long text. It has to be read all at once this way or it appears disjointed. I don't always want to read it all at once. Just bloody stop it, it's irritating me.

## THE BITS ON THE SIDE...

You can use the new Zappo drive as a CD-ROM for the A600, but you won't be able to play CD<sup>32</sup> games on it because the A600 isn't an AGA machine.

Please could you tell me if the Zappo CD-ROM drive for the A1200 is compatible with a 2Mb A600 without hard drive. I saw it in *Amiga Format* and noticed that it fitted into the PCMCIA slot. I am enquiring about this because I have seen PCMCIA cards for both the A600 and A1200.

David Wilkes, Lancashire

It will work as a standard CD-ROM drive, for reading things like CDTV discs and PD discs, but as far as CD<sup>32</sup> games go, forget it – your machine ain't AGA.

I have found that a flatfish such as plaice or skate makes a great novelty mouse mat!

Paul Harrison, Gwent

Thanks – do any other readers have useful tips?

There are three things that I wish to ask you. They are:

1) Are Bullfrog definitely bringing out *Theme Park* for the Amiga 500/600? The reason I ask is that when I saw the game previewed in AF59, I immediately wanted it and could not wait for it to come out in July (which is when you said it would come out in AF60). You then stated that it was due to be released in August and I thought I would reserve a copy. So I phoned European Computer (on page 47 of AF61), but they said that *Theme*

*Park* would probably not be coming out for the Amiga 500/600.

2) I bought *Arcade Pool* a week ago and played *Speed Pool* and got a lighting-fast 20 seconds. I was wondering if this was a record?

3) Can I have an AF mug please, please, please?

Ewan Duncan, Ayrshire

1) Yes indeedy. The A500/600 version of *Theme Park* is definitely in development (it better be: we've got an exclusive demo on *Amiga Format's* Coverdisk!), although the A1200 version will be on sale first.

2) I doubt it... Any takers?

3) No you can't. There are no mugs round here, mate.

I would like to express my thanks to Canon (UK) for all the help that they gave me in deciding which printer to buy. I had read the *Amiga Format* review of the Canon BJC600 (AF53 90%), and considering the high score that you gave it I tried to obtain some print samples for colour bubblejet printers.

Canon were the only company that actually answered all of my questions and sent me a vast range of print samples. They offer extremely helpful advice and, more importantly than that, they fully support the Amiga!

Mr Edwards, South Glamorgan

Job done.

PPPPS: Tim Smith's and Jeff Walker's respective columns are great! Are there any more freelancers willing to lend their hand to AF? I wonder? If so grab 'em.

PPPPS: Why not have a special PS column in letters? (Rename 'Bits On The Side' to PS.)

PPPPPS: Um, let me think. Ah yes, have a free subscription for the best letter of the month. People who already have one get another year's on top, or a T-shirt or something.

PPPPPPS: Put PD Demos on the Coverdisks (maybe when you have three of them). This would waken the un-initiated and please the vets.

PPPPPPPS: Why not run a high profile compo like *Housey Housey* on the *Big Breakfast*. You could call it *Hardy Hardy*. You would give a hard disk away as the prize every month to

whoever spotted the hidden blue objects or whatever.

PPPPPPPPPS: I've been getting this mag since Issue 26 you know! Ahh, those were the days – when you could go out with a tenner and come back with some ST rehash.

PPPPPPPPPS: I thought the art tutorial was for *DPaint*, not just *PPaint* which hardly anyone's got. PPPPPPPPPPS: AAAAAAANND CUT! I'll be back!

Nick Donnelly, Cambridgeshire

In numerical order (by amount of Ps):

1) Between *Letters* and *Workbench*, we think we already have enough Qs and As.

2) There will be another edition of *Amiga CD<sup>32</sup>* on sale in October. Further specials have yet to be finalised.

3) No. However, we will probably 'box-off' one or two of the bigger items.

4) We are in discussions at the moment.

5) Aah, I rather think not.

6) Why should we give people prizes for writing about their favourite subject?

7) The Coverdisks are already too full of expensive software – but you do get top PD stuff on the *Subscribers' Superdisk* (see page 32 to find out how to subscribe).

8) What about last issue's compo, where we gave away four grand's worth of CD kit? Not bad!

9) I worked on Issue 1, you know.

10) Point taken: we're tweaking the tutorial so that it's more useful for all Amiga artists.

11) Oh... goody.

## FLIPPIN' FLOPPIES

I recently switched computers, from the Atari STE 1Mb to the A1200. I am impressed by the graphics and sound capabilities of the machine and intensely annoyed by some other factors. Disk access – the Amiga's drive might hold more but it's slow! And when you are on a floppy-only system you really notice it.

The format seems unreliable: I have had several disks corrupt on me in the last three months when for four years of owning various STs none ever did this.

And this business with a disk-based OS – with only one drive, formatting is a disk-swap nightmare!

I got a hard drive and a second drive recently and the extra money I paid for these make the computer useable – (in fact better than any ST). But since having a hard drive I have noticed a surprising lack of HD installable commercial software. Some of the few that are installable don't even use the AGA chipset. This includes some of the more recent games, such as *Space Hulk*, which spends most of the time loading.

*M1 Tank Platoon*, contrary to its manual, is actually installable. Just put it in a folder and it runs OK.

Andrew Fortune, Derbyshire

Well, no-one said the Amiga was infallible. Still, I'm sure the extra disk accessing time is more than worth the wait for all those lovely graphics.

The main reason software houses are loath to make games hard disk-installable is that it makes the game a doddle to pirate. So who can blame them for sticking to floppies?

## VIRTUALLY USELESS

Being the generous type who enjoys sharing good ideas with other people I thought I'd write and tell everyone how to make a cheap, yet effective virtual reality system.

Firstly take an old glove (or even a mitten) and tie bits of string (or yarn) to the fingers with the loose ends glued to the moving part of your joystick. This will activate the joystick when you wave your hand about in the air.

Now for the headset. Take two poles, lying one horizontally on each shoulder. On one end of them sturdily attach your monitor/TV in front of your face and on the other end (behind you) use an object of similar weight to counter-balance it. Using some careful balancing your screen should be suspended just before your eyes.

And there you go, all set up so you'd hardly know the difference, except for the thousands of pounds you saved!

Louise Harrison, Gwent

Maybe if more people took Louise's advice, Britain might not be in the economic mess it is now. But then again...

## MISSING THE POINT

Why is computer software different from any other consumer product? Why should it, and the people who produce it, be regarded as a special case? Yes, this is yet another letter about piracy! Take a trip to a car boot sale and you'll see pirated music tapes, video tapes, perfumes, and you can even get pirated satellite telly cards. So why isn't there a Federation Against T-Shirt Theft, or a Federation Against Perfume Theft?

How have the software houses managed to get such clout that they have police and trading standards departments rushing around grabbing dodgy floppies while other pirates are left in relative peace?

Why should I feel more sorry for 'The Softies' (your rather apt description) than for Benetton or EMI? I know that all theft is wicked – it's a wicked world – it's just that you obviously feel that some theft is more wicked than other theft. How else can you explain the constant, boring, moralising about software theft that spoils your otherwise enjoyable mag?

No name provided

If we were a T-shirt magazine or a record magazine or a video magazine, then we'd hammer on about piracy in that market. Call me old fashioned, but it seems the right thing to do to bring the evils of software theft to the attention of our software-using readers.

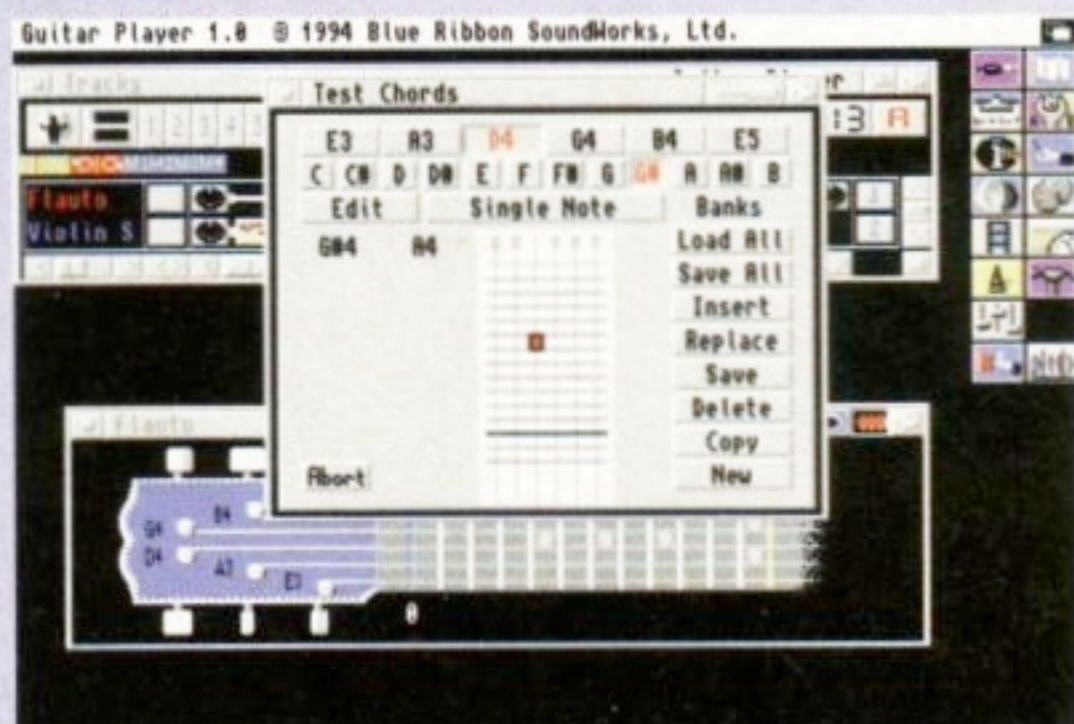

Dreadfully sorry about the constant, boring, moralising about something that's tearing the crap out of this market. I guess we'll just have to stop and pretend it doesn't happen.

## MANUAL LABOUR

I would like to complain about the appalling quality of the manuals for nearly every game I have ever bought. Manuals such as *Premier Manager 2* skim over half the features but do not explain the function of some vital options, such as high, normal or low passing, and the various playing styles, and the budget release of *Turrican 2* misses out the

## MOANS&GRIPES

Is Bars&Pipes Professional 2.5 an invaluable piece of software for Amiga musicians, or is it overpriced at £70?

Thank you for your review of *Bars&Pipes Professional 2.5* (AF61 78%). There are a few discrepancies that need to be noted.

First, the Guitar Tool is not "a weird tool..." as you state in your review. Although it can be used for many things, its concrete use is to change keyboard chord voicings into guitar chord voicings. Of course, it also does everything else you mention, in addition to providing an on-screen fretboard for note and chord entering and visualisation. Another item of interest to guitarists is 2.5's ability to print tablature in addition to standard notation.

You spend almost two paragraphs complaining that pattern-based editing and playback is not adequately supported. However, you neglected to mention that the Pattern Tool and Loop Tool provide powerful pattern-based editing and playback, in addition to 2.5's new Track looping feature. That's a lot of flexibility.

Also, *Bars&Pipes Pro 2.5* provides several potential methods of triggering samples:

- 1) The SamplePhone Tool plays back IFF samples and can be triggered via MIDI or the Media Madness window.
- 2) The Command Performance Tool can trigger an external sound utility via AREXX.
- 3) *SuperJAM!* owners can use the TurboSound Tool to play several sound samples simultaneously.

music test screen and many others.

Also, manuals on a CD sound wonderful. They are not. It is not possible to sit and read the manual when you get stuck into the game, unless you reset the machine and read the instructions. Not good.

I think you should include a comment on the quality of the manual in your reviews. Who wants to buy a complicated strategy game then spend a month working out what to do because the manual explains it wrongly?

It can't be too difficult for the software publishers to produce decent manuals - I have never found fault with any of Virgin's manuals (*Goal* and *Mortal Kombat*), and Inteltek produced a superb manual for *Championship Manager Italia* (although it does miss out one of the

4) Internal Sounds Kit owners can use the AmigaPhone Tool to play back looping instrument samples.

Some other great features of 2.5 that you won't find in 2.0 include the ability to merge a group of tracks, or split a track into component pitches with one command. The Step Entry feature in 2.5 has also been improved greatly.

As with any program, personal preference makes all the difference. If you are already a *Bars&Pipes Professional* user, you'll find that after using 2.5 for a while you won't want to go back to 2.0. If you have never used *Bars&Pipes* before, you'll find that version 2.5 provides all the features you could ever want.

The Blue Ribbon SoundWorks also provides *Rules For Tools*, which allows you to create your own *Bars&Pipes* Tools and Accessories in the C programming language. The *Rules For Tools* package guarantees that *Bars&Pipes Professional* will continue to expand and grow for as long as there are Amiga owners with C compilers. Can you say the same for other music software?

Mark Burton, *The Blue Ribbon SoundWorks Ltd*

Over to Maff Evans... "I don't doubt that *Bars&Pipes Pro 2.5* is a powerful program, but £70 for some new tools and a few streamlined elements is still a rather expensive update. Despite your criticisms, I find no reason to change my opinion of the new version."

player statistics), and except for *Ultimate Body Blows*, I have found Team 17's manuals comprehensive and entertaining.

So software publishers, take note! The people who buy your games can't play them unless the instructions are adequate. If you must produce short instructions please make sure that they are correct. Maybe even spell check them (Gremlin seem to have forgotten to do this on the *Premier Manager 2* instructions).

Mike Richmond, *North Humberside*

Well, half the challenge is working out how to play the game without reading the manual. But it is infuriating when the instructions... er... don't. Steve Bradley says he'll bear your comments in mind when he's doing the game reviews.

## THE MAN AT THE TOP

Write to Commodore UK managing director David Pleasance c/o Amiga Format, 30 Monmouth Street, Bath, Avon BA1 2BW.

### GET IN THE FAST LANE

After reading the M-Tec accelerator card review in Issue 59 of *Amiga Format*, I have realised just how important Fast RAM is. The speed of an A1200 was increased by 42 per cent for rendering by adding Fast RAM alone. The increase in speed for games should be even greater, because the CPU has the sound chip to contend with as well.

So, why not swap a quarter of a megabyte of the A1200's and CD32's Chip RAM for Fast RAM? That's all a game should need for its main screen updating routines, and programs would have a field day with the extra power generated.

G Sherlock, Wirral, Merseyside

Adding Fast RAM to the A1200 and CD32 would increase performance for a lot of software. However, it is not technically feasible to split 256K from Chip RAM for use as Fast RAM. The minimum chunk that could be split is 512K. However, this would create problems for RAM expanders and accelerators recognising the different configurations. I guess the solution is to provide a motherboard which allows for the addition of Fast RAM SIMMs when the users require it. Our Research And Development engineers will give this serious consideration, and I will ensure that Amiga Format is informed of any outcome.

### WHY NO MASCOT?

I have always noticed something missing from the Amiga compared to Nintendos and Segas. What I'm talking about is a mascot such as Mario or Sonic - something to identify with. 3DO has not been very successful, the same is true of the Jaguar, and the Amiga (CD32 in particular) will go the same way unless something is done.

I know Commodore don't program games, but why not pay, or buy out, a company such as Gremlin to make a character and game for you, which Commodore would hold the copyright to.

Commodore need to be purchased soon, surely a character such as this would make it a much more attractive proposition to buy out? The character wouldn't have to be a lovable cute one - it could be a well hard dinosaur or a swamp monster. You may think this approach of a mascot-type character is out-dated, but it sells machines and that is what Commodore desperately need to do.

Nick Donnelly, Ely, Cambs

*This is a topic that has often been raised in the past, but it is worth airing again. Firstly can I assure you that we have been offered on an exclusive basis, wonderful characters such as Zool from Gremlin. However, there are a number of reasons why we haven't, thus far, chosen to follow this route.*

*Commodore pioneered the initiative of bundles, creating packs which include the latest and best in gaming software, thereby ensuring that purchasers always gets free what they would certainly buy anyway. This precludes us from tying ourselves to a character over a long period of time, which would undoubtedly become out of fashion. Also, it is important to remember that Commodore is not a software publisher, and therefore does not make the same massive profits as the Japanese console manufacturers do with their Sonics and Marios. The 8 and 16-bit console market is in a terrible state of affairs with business forecast to drop over 50 per cent this year - so where is the help from Sonic and Mario now?*

# GALLERY

**Jason Holborn is your guide through this month's selection of the cream of reader art. What a talented lot you are!**

## CORRIDOR

*By Dennis Tsagaropoulos, Venezia, Italy*  
This absolutely stunning *Imagine* picture has to be one of the best-rendered images we've ever received in the AF offices. Most rendered images are quite obviously artificial but the use of subtle lighting and reflective surfaces give this image a gloomy yet very natural feel.

**£25 winner**

There's a £25 mail order voucher for the best Gallery pic every month. Send your entries to: Amiga Format Gallery, 30 Monmouth St, Bath, Avon BA1 2BW.

## AMIGA

*By J Austin Taylor, Swansea*  
This image gets its name from the Spanish word *Amiga* which means girlfriend. Worth noting is the clever use of shading on the woman's face which raises the focal point out of the blue.

## PIN HEAD

*by Angelo Pliatsikas, Glasgow*  
This image was created on an AGA-based Amiga, but the colour palette is surprisingly limited. This is intentional, and makes the Pin Head character (star of the *Hell Raiser* films) more menacing.

## WORKING LATE

*By Angelo Pliatsikas, Glasgow*  
Trying my best not to be sexist, but the focal point of this image is the legs. The picture was drawn on an AGA machine and note the clever use of the *DPaint* Perspective tool to create a patterned floor.

## A1200

*By Danny Chrastina, Scunthorpe*  
One of the most impressive aspects of this picture is how the image on the monitor creates an illusion of infinite progression. This effect must have taken many hours to create because it needs to be rendered many times to achieve the progression.

## VIPER

*By J Austin Taylor, Swansea*  
Based on the spacecraft from the sci-fi flick *BattleStar Galactica*, this is a fine example of how to combine traditional painting techniques with rendering programs. The image was rendered in *Imagine* and then pasted on to a *DPaint* starfield.

## TREES

*By Richard Moredy, Tunbridge Wells*  
Not the most technically stunning of the images on show, but Richard's image caught my eye because of its clever use of dappling effects. Quite how Richard achieved this is unknown but I suspect that an image-processing program may have been involved.

For a full catalogue send a stamped addressed envelope, with a  
disk, or send a cheque or PO for 70p made payable to C. WAITE.  
All disks guaranteed virus free & Error Free  
All disks 80p each + 70p P & P

## TAKE THE RANDOM FACTOR OUT OF PD PURCHASING WITH...

# SHATTERED IMAGE

We have individual catalogue disks for Utilis, Games, Demos and Slideshows and Fish disks. No more inaccurate ordering  
with Shattered Image, the Robin Hood of PD companies.

**CAT 1: Standard Cat CAT 2: Games CAT 3: Utilis CAT 4: Demos and Slideshows CAT 5: Fish**

Catalogue disks have as much free software on them as we could fit and can be obtained for 2 stamps and an envelope.  
All disks we send out are checked for virii, alien symbiotes, errors and subliminal messages if played backwards.

We also stock commercial hardware and software and can save you cash on many sexy items - just let us know what you  
require and we'll skateboard the wrong way down the M1 just to get it to you. Also phone or write for our Hardware and  
Software prices. There are not many companies in this magazine with cheaper prices than us - we have great prices on  
SNES, Megadrive, PC's and the lovely Amiga to name but 4.

Any PD you can see in this magazine or in any other Amiga mag - we've got it or can get it. So why shop around when you  
can get it all here?

Call our amazing BBS called WET N WILD on: 0793 878357, lots of files, games and other stuff. Speeds up to 26,800

**OTHER THINGS WE STOCK: 1000 4 COLOUR LABELS - £9.00 DUST COVERS - £2.99**  
**BLANK DS/DD DISKS ONLY 30p EACH. JOYSTICKS FROM £4.99**

**ALL ABOVE PRICES INCLUDE P&P**

PD Disk Prices: 1-5 £1.50, 6-10 £1.25, 11-30 £1.00, 31+ Phone

Please add 50p for postage and packing in UK. Outside UK please phone.

**SHATTERED IMAGE (AF), 13 LA PORTE PRECINCT, GRANGEMOUTH, SCOTLAND FK3 8AZ**  
And remember: Get out and about - take up underwater hang-gliding.

AMIVISION SOFTWARE

# Formula 1 Challenge v4

Addictive and detailed multi-player formula one management simulation

Sign driver contracts from any of the 50 drivers, make engine and tyre supplier deals. Check the weather conditions and forecast, call up the track information and set up your cars for qualifying. Choose your wing settings and tyre compounds as well as tuning the engines and even training your pit crew! Then its on to the race... the engines rev as the drivers await the green light... then suddenly the light changes and the cars zoom off the grid.

Watch the races as they unfold with three levels of highlights, monitor tyre wear and grip levels, make pitstops, crashes, spins, pile-ups, car failures, stop/go penalties, weather changes, fastest & record laps, pitstops, etc.

NOW with full 1994 season details, drivers, teams, circuits etc.

Accurate and detailed graphics of the cars, championship circuits etc. Qualifying, news section, realistic sound fx, load/save games, weather forecasts, statistics saved, sponsors, full drivers

**ONLY £14.95!**  
1Mb.REQUIRED. A1200 COMPATIBLE

Order both Formula One Challenge v4 & Football Statistician Pro and save almost £5! Special offer price £24.95

NEW

# Football Statistician

## Professional

League results database and analysis utility

- ★ Store league results
- ★ Analyse results with graphs
- ★ Predict match results (pools prediction)
- ★ Follow your favourite teams performance and form
- ★ Store analyse any type of league with 2-24 teams (bowling, snooker, darts leagues etc)
- ★ Numerous statistics and display methods
- ★ Many preferences and options
- ★ Easy to use interface

An essential program for any football fan or for storing, analysing any other type of league

# NORTHERN AMIGA USERS GROUP

Dept AF, P.O. Box 151, Darlington, County Durham, DL3 8YT. Tel. (0325) 352260

## Amiga Format User Group Offer!

Until September 30th you can join Northern Amiga Users Group for only £8.50. That's 15% off the normal yearly Platinum membership.

We're one of the fastest growing user groups in the country, here's why:

- ⇒ N.A.U.G. are an Amiga only User Group
- ⇒ Members are entitled to 20% off all Public Domain
- ⇒ Many Discounts on hardware and software for Members
- ⇒ Monthly Disk Magazine which includes news, views, gossip, adverts, contact pages and many other sections
- ⇒ Meet other members and free access to our phone helpline
- ⇒ Plus Many other benefits always on offer as a member

### How to Join

Either send a cheque or postal order for £8.50 and we will enrol you as a Platinum yearly member (sending you the disk magazine and discount vouchers in return) or send an S.A.E. for further information about the user group. If you would like an example disk magazine then send a blank disk with your return envelope.

Tel. +(44) 325 352260

### EPU Stacker v1.62

## ATTACK HELICOPTER FLIGHT SIMULATOR

The Comanche will be the most advanced helicopter the world has ever seen. When its development is complete it will enter service with the U.S. Army in 1996.

**Boeing/Sikorsky RAH 66**  
**~ COMANCHE ~**

Select your mission and test your flying skills over a 65000 sqr km, fractally generated battle area. Pit your wits against intelligent enemy anti aircraft weapons and enemy helicopter. Comanche's armaments and avionics systems are: 4 Hellfire missiles, 8 Stinger missiles and 500 rounds of 20mm cannon ammo. Radar and FLIR targeting systems. Flight control computer. The software: Sophisticated flight modelling algorithms. Utilises state of the art filled polygon 3D real time rendering techniques. 8 view modes. Realistic sound effects. Stunning fragmented object explosions.

This software is comparable with current top flight simulators, but without expensive packaging and distribution costs. Available through mail order only.

**Only £9.95 Includes instruction manual, postage and packaging.**  
Guaranteed fast delivery. Compatible with any one megabyte Amiga.

PLEASE MAKE CHEQUE/POSTAL ORDER PAYABLE TO:

# POOLSWINNER

1994/5 THE POOLS PREDICTION PROGRAM  
WITH ARTIFICIAL INTELLIGENCE

Gold

- THE LEGENDARY POOLS PREDICTION AID, Poolswinner, now has artificial intelligence. The latest version of the program, Poolswinner Gold, has the power to learn from the results of its own predictions, constantly adjusting the prediction formula to improve performance.
- AUTOMATIC FIXTURE GENERATION: Fixtures for English and Scottish League matches are generated automatically by Poolswinner Gold (yearly updates are available from Selec).
- MASSIVE DATABASE 22000 match database over 10 years.
- PREDICTS SCOREDRAWS, NO-SCORES, ALWAYS and HOMES Predictions are based on many factors .. recent form, the massive database, league standing, goal scoring rates, and draw averages. The user can adjust all parameters.
- SUCCESSFUL Selec guarantee that Poolswinner performs significantly better than chance.
- LEAGUE AND NON-LEAGUE matches are covered. Can be used for the non-league and amateur matches often on the coupon.
- FULL LEAGUE TABLES (home & away) are automatically generated by the program as results come in.
- UPDATED WEEKLY. Poolswinner Gold is supplied fully updated with all league results from the start of the season
- IMMEDIATE USE No need for tiresome input of previous results. All results are already in the program - predictions can start immediately.
- PACKAGE CONTAINS disc, detailed operating manual and support literature.

£42.50  
All inclusive

Also available from Selec ...

## COURSEWINNER V4 £36.50

THE PUNTER'S COMPUTER PROGRAM. With artificial intelligence. Uses past form, going, distance, speed ratings, prize money etc. Contains British course statistics - best jockeys, trainers, draw effect etc. Detailed analysis of all runners in a race, with profit. Sophisticated aid to successful betting, with a long pedigree.

## POOLS PERM PLUS £36.50

Perm analyser and checker, complete with 5 years of coupon results and popular perms for analysis. Checks your weekly entry for winning lines, or tests your theories on results over the last 5 years. Reveals all the weeks a bet would have won, and the probable dividend.

Formats available: IBM (MSDOS 3 or 5")  
AMIGA all models  
ATARI ST/Falcon

All programs are supplied on disc, packaged with detailed instruction manual, and support literature.  
Prices are inclusive of VAT & delivery

# SELF DEFENCE

Unarmed combat expert and top professional 'bouncer', Paul Wellard, has been an active participant in dozens of fights where brawling is quick, dirty and very violent. As a 2nd Dan Karate Black Belt he has learned that martial arts training is useful in a brawl, but it is no substitute for real street fighting "know how". He has now compiled two unique guides to **real** self defence.

**The Secrets of Street Self Defence - Volume 1 Reveals:** ● 18 facts you should know about street fighting. ● Inside the mind of a thug. ● The martial arts and their relevance to street fighting. ● How and why fights occur. ● Dealing with confrontational situations. ● How to psyche out an opponent. ● Essential principles of street fighting. ● Some commonly taught nonsense. ● Using surprise to your advantage. ● How elbows and knees are used in a street fight. ● Vital tips.

**The Secrets of Street Self Defence - Volume 2 Reveals:** ● The warrior mentality. ● The most effective street fighting techniques and how to use them. ● Defence against knife/bottle attacks. ● Defence against more than one attacker. ● Using your fists and legs to maximum effect. ● Headbutts. ● Physical conditioning for peak performance.

In his highly detailed books, Wellard draws on his experiences to reveal the psychology, strengths and weaknesses of a street fighter, the characteristics of a real fight (you might be surprised): ways of dealing with aggressive people and lots of tips and tricks. He presents the basic defence moves that can be applied to most types of attack and offers straightforward training programmes to improve individual techniques. He supplies the critical information no one else talks about - that will keep you unhurt and intact.

Each book, available by mail order only, is priced at just £12.95 postpaid or you can order both books for only £19.95 postpaid. To order please write to: Casuti Ltd., AF PO Box 115, St. Helier JE4 8QZ, with your name, address and payment (credit card holders may phone 0534-617181 anytime) asking for 'The Secrets of Street Self Defence Volume 1 and/or Volume 2'. We usually deliver much faster, but please allow a maximum 28 days. All orders are despatched under plain cover. You can return either book within 30 days for a full, no questions asked refund if you

## HIGH QUALITY SOUND SAMPLES

EXTENDED RANGE OF IFF SAMPLES (Includes new RHYTHM LOOP disks)

Each disk is compiled from a studio recorded master and is sampled on the Amiga at twice the sample rate of P.D. sample disks. They are compatible with all P.D. and commercial tracker and sequencer programs, and are highly regarded by the Amiga Press. "There are a lot of sample libraries around but this one is absolutely brilliant" Amiga Computing 2/93. "This collection of disks shows how it should be done... the conventional instrument samples are the best I've heard on the Amiga" CU Amiga 7/92. "Do you want some high quality and wide ranging sounds to use in your compositions? Well then this is the place to look." Rating 87% Amiga Format Special Aut/92. N.B no of samples in brackets

# AMIGA FORMAT

In the next issue of the world's best Amiga magazine, you'll discover the easy route to making videos on your Amiga. You don't need thousands of pounds worth of kit – just a little imagination. We'll show you how...

Sadly, the exact contents of next issue's Coverdisks are a state secret. No, really. We *could* tell you, then we'd have to kill you. Ohh... all right. Two words: **Theme Park**. Probably. (Damn! That's three.)

### YOUR GUARANTEE OF VALUE

This magazine comes from Future Publishing, a company founded just nine years ago but now selling more computer magazines than any other in Britain. We offer:

Better advice. Our titles are packed with tips, suggestions and explanatory features, written by the very best in the business.

Stronger reviews. We have a cast-iron policy of editorial independence and our reviews give clear buying recommendations.

Clearer design. You need solid information fast. So our designers highlight key elements by using charts, diagrams, summary boxes, and so on...

Greater relevance. At Future, Editors operate under two golden rules:

- Understand your readers' needs.
- Then satisfy them.

More reader interaction. We draw on readers' contributions, resulting in the liveliest letters pages and the best reader tips. Buying one of our magazines is like joining a nationwide user group.

Better value for money. More pages, better quality - magazines you can trust.
